<b>Preface</b> . . . . .	xiii
<b>List of figures</b> . . . . .	xvii
<b>List of tables</b> . . . . .	xxvii
<b>List of abbreviations and acronyms</b> . . . . .	xxix
<b>About the authors</b> . . . . .	xxxiii
<b>List of contributors</b> . . . . .	xxxv
<b>1 Introduction (<i>Volker Bothmer and Ioannis Daglis</i>)</b> . . . . .	1
<b>2 Space weather forecasting historically viewed through the lens of meteorology (<i>George Siscoe</i>)</b> . . . . .	5
2.1 Sibling sciences . . . . .	5
2.2 Steps in the advance of environmental forecasting: the meteorological experience . . . . .	6
2.3 Relevant analogies between terrestrial weather and space weather . . . . .	10
2.4 Steps in the advance of space weather forecasting . . . . .	11
2.4.1 Stage 1: social impacts . . . . .	11
2.4.2 Stage 2: visual observations. . . . .	13
2.4.3 Stages 3 and 4: instrument observations and synoptic images . . . . .	14
2.4.4 Stages 5 and 6: real-time predictions based on advection of static structures. . . . .	17
2.4.5 Stage 7: subjective analysis . . . . .	19
2.4.6 Stage 8: objective space weather forecasting . . . . .	21
2.4.7 Stage 9: numerical space weather prediction . . . . .	23

2.4.8	Stage 10: storm tracking. . . . .	24
2.4.9	Critical supplementary step: university teaching of space weather forecasting. . . . .	25
2.5	Important comparative topics not covered . . . . .	25
2.6	Summary . . . . .	26
2.7	Acknowledgements. . . . .	26
2.8	References . . . . .	26
<b>3</b>	<b>The Sun as the prime source of space weather (<i>Volker Bothmer and Andrei Zhukov</i>).</b> . . . . .	<b>31</b>
3.1	Introduction – the Sun’s energy output and variability . . . . .	31
3.2	Space weather effects of the quasi steady-state corona . . . . .	37
3.2.1	Slow and fast solar wind streams and their source regions . . . . .	37
3.2.2	Solar wind impact on the Earth’s magnetosphere . . . . .	40
3.2.3	Space storms due to co-rotating interaction regions and high-speed flows . . . . .	42
3.3	Space weather effects of the dynamic corona . . . . .	48
3.3.1	The ever changing photospheric magnetic field . . . . .	48
3.3.2	The explosive corona – coronal mass ejections and flares . . . . .	50
3.3.3	Interplanetary consequences of coronal mass ejections – shocks and ICMEs . . . . .	55
3.3.4	Examples of space storms driven by CMEs/ICMEs . . . . .	58
3.3.5	Major SEP events, CME-driven shocks and radio-wave signatures . . . . .	65
3.4	Space storms over the solar cycle – times of occurrence and importance of solar, heliospheric and magnetospheric modulations . . . . .	71
3.5	Solar observations and modeling for space weather forecasts . . . . .	80
3.5.1	Modeling the quasi steady-state corona and solar wind . . . . .	81
3.5.2	Forecasting coronal mass ejections and solar energetic particle events . . . . .	83
3.6	Acknowledgements. . . . .	90
3.7	References . . . . .	92
<b>4</b>	<b>The coupling of the solar wind to the Earth’s magnetosphere (<i>Christopher T. Russell</i>).</b> . . . . .	<b>103</b>
4.1	Introduction . . . . .	103
4.2	The bow shock and the magnetosheath . . . . .	106
4.3	The size and shape of the magnetosphere. . . . .	112
4.4	Reconnection . . . . .	114
4.5	Dayside reconnection . . . . .	117
4.6	Substorms . . . . .	119
4.7	Storms . . . . .	124
4.8	Field-aligned currents. . . . .	126
4.9	Summary . . . . .	129
4.10	Acknowledgements. . . . .	130
4.11	References . . . . .	130

<b>5</b>	<b>Major radiation environments in the heliosphere and their implications for interplanetary travel (<i>Norma B. Crosby</i>)</b>	131
5.1	Introduction	131
5.1.1	The heliosphere	132
5.1.2	Cosmic rays	132
5.1.3	Other particle populations	134
5.1.4	Summary	135
5.2	Galactic cosmic rays	136
5.2.1	The energy spectrum	137
5.2.2	Origin and acceleration mechanisms	138
5.2.3	Summary	141
5.3	Anomalous cosmic rays	141
5.4	Solar energetic particles	143
5.4.1	Impulsive and gradual events	143
5.4.2	Solar proton events (empirical models and forecasting)	145
5.5	Energetic storm particles	147
5.6	Corotating interaction regions	149
5.7	Planetary bow shocks	150
5.8	Geomagnetically trapped particles	153
5.8.1	Earth's radiation belts	154
5.8.2	Radiation belts of other planets	158
5.9	Interplanetary space weather and the implications	159
5.9.1	Case study: mission to Mars scenario	161
5.10	Summary	164
5.11	Acknowledgements	165
5.12	References	165
<b>6</b>	<b>Radiation belts and ring current (<i>Daniel N. Baker and Ioannis A. Daglis</i>)</b>	173
6.1	Introduction and historical context	173
6.2	Radiation belt sources	175
6.3	Radiation belt structure and dynamics	179
6.4	Ring current structure, sources and formation	184
6.5	Ring current dynamics	188
6.6	Synopsis	195
6.7	References	196
<b>7</b>	<b>Ionospheric response (<i>Kristian Schlegel</i>)</b>	203
7.1	Introduction	203
7.2	Particle precipitation	204
7.3	Conductivities and currents	206
7.4	Magnetic signatures on the ground and geomagnetic indices	213
7.5	Aurorae	214
7.6	Consequences of electron density enhancements and fluctuations	218
7.7	Solar-flare and cosmic-ray related effects	220
7.8	References	223

<b>8</b>	<b>Solar effects in the middle and lower stratosphere and probable associations with the troposphere (<i>Karin Labitzke and Harry van Loon</i>) . . . . .</b>	<b>225</b>
8.1	Introduction . . . . .	225
8.2	Data and methods . . . . .	227
8.3	Variability in the stratosphere . . . . .	229
8.4	Solar influences on the stratosphere and troposphere . . . . .	231
8.4.1	The stratosphere during the northern winter . . . . .	231
8.4.2	The stratosphere during the northern summer . . . . .	233
8.4.3	The troposphere . . . . .	237
8.5	Models and mechanisms . . . . .	240
8.6	Acknowledgements . . . . .	241
8.7	References . . . . .	242
<b>9</b>	<b>Space weather effects on communications (<i>Louis J. Lanzerotti</i>) . . . . .</b>	<b>247</b>
9.1	Introduction . . . . .	247
9.2	Early effects on wire-line telegraph communications . . . . .	248
9.3	Early effects on wireless communications . . . . .	251
9.4	The beginning of the space era . . . . .	253
9.5	Solar–terrestrial environmental effects on communications technologies . . . . .	255
9.5.1	Ionosphere and wireless . . . . .	256
9.5.2	Ionosphere and Earth currents . . . . .	257
9.5.3	Solar radio emissions . . . . .	258
9.5.4	Space radiation effects . . . . .	260
9.5.5	Magnetic field variations . . . . .	263
9.5.6	Micrometeoroids and space debris . . . . .	263
9.5.7	Atmosphere: low-altitude spacecraft drag . . . . .	263
9.5.8	Atmosphere: water vapour . . . . .	264
9.6	Summary . . . . .	264
9.7	Acknowledgements . . . . .	265
9.8	References . . . . .	265
<b>10</b>	<b>Space weather effects on power grids (<i>Risto Pirjola</i>) . . . . .</b>	<b>269</b>
10.1	Introduction . . . . .	269
10.2	GIC problems in power systems . . . . .	271
10.3	Modelling of GIC in a power system . . . . .	274
10.3.1	Calculation of the geoelectric field . . . . .	275
10.3.2	Calculation of GIC . . . . .	277
10.4	GIC research in the Finnish high-voltage power grid . . . . .	279
10.5	Conclusion . . . . .	283
10.6	Acknowledgements . . . . .	284
10.7	References . . . . .	284

<b>11</b>	<b>Space weather impacts on space radiation protection (<i>Rainer Facius and Günther Reitz</i>)</b>	289
11.1	Introduction	289
11.2	Radiation fields	290
11.2.1	Primary fields	290
11.2.2	Magnetic and material shielding	306
11.3	Radiation dosimetry	311
11.3.1	Measures of exposure	313
11.3.2	Relative biological effectiveness (RBE), equivalent dose	313
11.3.3	Ionization density, LET	314
11.4	Radiation effects on man	314
11.4.1	Radiation weighting factors and quality factors	316
11.4.2	Tissue weighting factors	317
11.4.3	Acute irradiation, early (deterministic) effects	318
11.4.4	Chronic irradiation, late (stochastic) effects	319
11.5	Radiation protection exposure limits	319
11.5.1	Chronic exposures, late cancer mortality	320
11.5.2	Acute exposures, early (deterministic effects)	321
11.6	Implications for manned spaceflight	322
11.6.1	Approaches towards proper dosimetric techniques	322
11.6.2	Exposures during LEO missions	324
11.6.3	Exposures during interplanetary missions	330
11.6.4	Observed health effects	335
11.7	Implications for air crews	336
11.7.1	Exposures	336
11.7.2	Observed health effects	341
11.8	Space weather impacts on the biosphere	341
11.9	Summary	344
11.10	Conversions	345
11.11	References	345
<b>12</b>	<b>Effects on spacecraft hardware and operations (<i>Alain Hilgers, Alexi Glover and Eamonn Daly</i>)</b>	353
12.1	Introduction	353
12.1.1	High-energy charged particles	353
12.1.2	Plasmas	356
12.1.3	Electromagnetic environment	359
12.1.4	Atomic environment	359
12.1.5	Micro-particle environment	360
12.1.6	Environment and effects: summary	360
12.2	Dynamics and variability of the space environment	360
12.2.1	Space environment and solar–terrestrial dynamics	360
12.2.2	Variability of the space environment	361
12.3	Space environment monitoring for spacecraft	364
12.3.1	Ground-based measurements	366

12.3.2	Space-based measurements . . . . .	370
12.3.3	Near real-time monitoring data: summary . . . . .	373
12.3.4	Forecast, precursors and models . . . . .	373
12.3.5	Services. . . . .	374
12.4	The future . . . . .	376
12.4.1	Data coverage . . . . .	376
12.4.2	Long-term continuity of data provision . . . . .	377
12.4.3	Reliability of data provision . . . . .	377
12.4.4	Model accuracy . . . . .	378
12.5	Conclusion. . . . .	378
12.6	Acknowledgements. . . . .	379
12.7	References . . . . .	379
<b>13</b>	<b>Effects on satellite navigation (<i>Bertram Arbesser-Rastburg and Norbert Jakowski</i>) . . . . .</b>	<b>383</b>
13.1	Introduction . . . . .	383
13.2	Satellite-based navigation technique. . . . .	384
13.3	Use of GNSS techniques for space weather monitoring. . . . .	386
13.3.1	Ground-based monitoring. . . . .	386
13.3.2	Space-based monitoring . . . . .	388
13.4	Space weather impact on the signal propagation medium . . . . .	389
13.4.1	Solar control of ionospheric ionization . . . . .	389
13.4.2	Ionospheric storms . . . . .	389
13.4.3	Small-scale irregularities in the ionosphere . . . . .	392
13.5	Space weather issues in specific navigation and positioning techniques . . . . .	394
13.5.1	Point positioning . . . . .	395
13.5.2	Satellite-based augmentation systems. . . . .	396
13.5.3	Local augmentation systems . . . . .	397
13.6	Summary. . . . .	398
13.7	Acknowledgements. . . . .	399
13.8	References . . . . .	400
<b>14</b>	<b>Forecasting space weather (<i>Dimitris Vassiliadis</i>). . . . .</b>	<b>403</b>
14.1	Introduction . . . . .	403
14.1.1	Empirical and physical models: tracking information versus energy . . . . .	405
14.1.2	Model predictions and forecasts. . . . .	407
14.1.3	Climatology and dynamics . . . . .	407
14.1.4	Input–output modelling . . . . .	408
14.1.5	An historical note . . . . .	408
14.2	Predictive model development: ring current dynamics and the $D_{st}$ index . . . . .	409
14.3	Enhancing the model . . . . .	410
14.3.1	Time dependence . . . . .	410

14.3.2	Multi-input models and input ranking. . . . .	411
14.3.3	Feedback and non-linearity. . . . .	412
14.3.4	Higher dimensions. . . . .	415
14.4	Data assimilation and Kalman filtering . . . . .	416
14.4.1	The Kalman filter . . . . .	417
14.4.2	Parameter estimation in a radiation-belt model . . . . .	418
14.4.3	Ionospheric data assimilation . . . . .	418
14.5	Model verification . . . . .	419
14.6	Summary and outlook . . . . .	421
14.6.1	Forecast providers. . . . .	421
14.7	Acknowledgements. . . . .	422
14.8	References . . . . .	422
