Contents

0. Introduction 11

0.1. What the spectrum of a graph is and how it is presented in this book 11
0.2. Some more graph theoretic notions and conventions 14
0.3. Some theorems from matrix theory and their application to the spectrum of a graph 17

1. Basic Properties of the Spectrum of a Graph 22

1.1. The adjacency matrix and the (ordinary) spectrum of a graph 22
1.2. A general method for defining different kinds of graph spectra 24
1.3. Some remarks concerning current spectra 28
1.4. The coefficients of $P_G(\lambda)$ 31
1.5. The coefficients of $C_G(\lambda)$ 37
1.6. The coefficients of $Q_G(\lambda)$ 40
1.7. A formula connecting the cyclic structure and the tree structure of a regular or semiregular multigraph 41
1.8. On the number of walks 43
1.9. Miscellaneous results and problems 47

2. Operations on Graphs and the Resulting Spectra 51

2.1. The polynomial of a graph 51
2.2. The spectrum of the complement, direct sum, and complete product of graphs . . 54
2.3. Reduction procedures for calculating the characteristic polynomial 59
2.4. Line graphs and total graphs 61
2.5. NEPS and Boolean functions 65
2.6. The determination of characteristic polynomials and spectra of graphs of some particular types 72
2.7. Miscellaneous results and problems 77

3. Relations Between Spectral and Structural Properties of Graphs 80

3.1. Digraphs 80
3.2. Graphs 84
3.3. Regular graphs 94
3.4. Some remarks on strongly regular graphs 103
3.5. Eigenvectors 104
3.6. Miscellaneous results and problems 112

4. The Divisor of a Graph 116

4.1. The divisor concept 116
4.2. Divisor and cover 117

4.3. A generalization of the divisor concept . . . 118
4.4. Symmetry properties and divisors of graphs . . . 118
4.5. The fundamental lemma connecting the divisor and the spectrum . . . 121
4.6. The divisor — an effective tool for factoring the characteristic polynomial . . . 125
4.7. The divisor — a mediator between structure and spectrum . . . 128
4.8. Miscellaneous results and problems . . . 131

5. The Spectrum and the Group of Automorphisms . . . 134

5.1. Symmetry and simple eigenvalues . . . 134
5.2. The spectrum and representations of the automorphism group . . . 141
5.3. The front divisor induced by a subgroup of the automorphism group . . . 149
5.4. Cospectral graphs with prescribed (distinct) automorphism groups . . . 153
5.5. Miscellaneous results and problems . . . 153

6. Characterization of Graphs by Means of Spectra . . . 156

6.1. Some families of non-isomorphic cospectral graphs . . . 156
6.2. The characterization of a graph by its spectrum . . . 161
6.3. The characterization and other spectral properties of line graphs . . . 168
6.4. Metrically regular graphs . . . 178
6.5. The $(-1, 1, 0)$-adjacency matrix and Seidel switching . . . 183
6.6. Miscellaneous results and problems . . . 185

7. Spectral Techniques in Graph Theory and Combinatorics . . . 189

7.1. The existence and the non-existence of certain combinatorial objects . . . 189
7.2. Strongly regular graphs and distance-transitive graphs . . . 193
7.3. Equiangular lines and two-graphs . . . 199
7.4. Connectedness and bipartiteness of certain graph products . . . 203
7.5. Determination of the number of walks . . . 209
7.6. Determination of the number of spanning trees . . . 217
7.7. Extremal problems . . . 221
7.8. Miscellaneous results and problems . . . 223

8. Applications in Chemistry and Physics . . . 228

8.1. Hückel's theory . . . 228
8.2. Graphs related to benzenoid hydrocarbons . . . 239
8.3. The dimer problem . . . 245
8.4. Vibration of a membrane . . . 252
8.5. Miscellaneous results and problems . . . 258

9. Some Additional Results . . . 260

9.1. Eigenvalues and imbeddings . . . 261
9.2. The distance polynomial . . . 263
9.3. The algebraic connectivity of a graph . . . 265
9.4. Integral graphs . . . 266
9.5. Some problems . . . 266

Appendix. Tables of Graph Spectra . . . 268

Bibliography . . . 324

Index of Symbols . . . 360

Index of Names . . . 361

Subject Index . . . 364
