<b>Preface</b>	xiii
<b>Symbols</b>	xix
<b>Acronyms</b>	xxi
<b>I Stability analysis of linear time-delay systems</b>	1
<b>1 Spectral properties of linear time-delay systems</b>	3
1.1 Time-delay systems of retarded type . . . . .	4
1.1.1 Initial value problem . . . . .	4
1.1.2 Spectrum: definitions . . . . .	7
1.1.3 Asymptotic growth rate of solutions and stability . . . . .	8
1.1.4 Spectrum: qualitative properties . . . . .	9
1.1.5 Spectrum: continuity properties . . . . .	11
1.1.6 Computation of characteristic roots . . . . .	13
1.2 Time-delay systems of neutral type . . . . .	15
1.2.1 Initial value problem . . . . .	15
1.2.2 Spectrum: definitions . . . . .	16
1.2.3 Asymptotic growth rate of solutions and stability . . . . .	19
1.2.4 Spectrum: qualitative properties . . . . .	20
1.2.5 Spectrum: continuity properties . . . . .	22
1.2.6 Computation of characteristic roots . . . . .	30
1.3 Notes and references . . . . .	31
<b>2 Pseudospectra and robust stability analysis</b>	33
2.1 Introduction . . . . .	33
2.2 Pseudospectra for nonlinear eigenvalue problems . . . . .	35
2.2.1 Definition and expressions . . . . .	35
2.2.2 Connection with stability radii . . . . .	37
2.2.3 Computational issues . . . . .	38
2.2.4 Application to time-delay systems . . . . .	39
2.3 Structured pseudospectra for nonlinear eigenvalue problems . . . . .	43

2.3.1	Exploiting the system's structure . . . . .	43
2.3.2	Definition and expressions . . . . .	43
2.3.3	Computational issues and special cases . . . . .	46
2.3.4	Application to time-delay systems . . . . .	49
2.4	Illustrative examples . . . . .	49
2.4.1	Second-order system . . . . .	50
2.4.2	Feedback controlled semiconductor laser . . . . .	51
2.5	Notes and references . . . . .	54
<b>3</b>	<b>Computation of stability regions in parameter spaces</b>	<b>57</b>
3.1	Introduction . . . . .	57
3.2	Basic notions and definitions . . . . .	58
3.3	From D-subdivision to numerical continuation . . . . .	59
3.3.1	D-subdivision and stability crossing boundaries . . . . .	59
3.3.2	$\tau$ -decomposition and delay stability intervals . . . . .	64
3.3.3	Numerical continuation . . . . .	69
3.4	Computing the crossing direction of characteristic roots . . . . .	71
3.4.1	Simple crossing characteristic roots . . . . .	71
3.4.2	Semisimple characteristic roots . . . . .	75
3.4.3	Further analysis: basic ideas . . . . .	78
3.4.4	Delay interdependence and crossing direction evaluation .	80
3.5	Notes and references . . . . .	81
<b>4</b>	<b>Stability regions in delay-parameter spaces</b>	<b>85</b>
4.1	Introduction . . . . .	85
4.2	Invariance properties . . . . .	86
4.2.1	Delay shifts and characteristic roots . . . . .	86
4.2.2	Crossing direction invariance . . . . .	87
4.3	Algebraic methods . . . . .	88
4.3.1	Elimination principle: basic ideas . . . . .	88
4.3.2	Matrix pencil approach and crossing characterization .	90
4.3.3	Particular cases and other elimination techniques .	94
4.4	Geometric methods . . . . .	98
4.4.1	Identification of crossing points . . . . .	100
4.4.2	Stability crossing curves . . . . .	102
4.4.3	Tangents, smoothness, and crossing direction . . . . .	107
4.5	Notes and references . . . . .	110
<b>5</b>	<b>Stability of delay rays and delay-interference</b>	<b>113</b>
5.1	Introduction . . . . .	113
5.2	Preliminary results . . . . .	115
5.2.1	Definitions and assumptions . . . . .	115
5.2.2	Introductory example . . . . .	116
5.3	Properties of some associated matrix-valued functions . . . . .	118
5.4	Delay-independent stability and delay-interference phenomena . . . . .	120
5.4.1	Delay-independent stability characterization . . . . .	121

5.5	5.4.2 Delay-interference characterization . . . . .	121
5.5	Illustrative examples . . . . .	124
5.5.1	Interference in parameterized scalar delay systems . . . . .	124
5.5.2	Delay rays and second-order delay systems . . . . .	125
5.6	Notes and references . . . . .	127
<b>6</b>	<b>Stability of linear periodic systems with delays</b>	<b>131</b>
6.1	Introduction . . . . .	131
6.2	Systems with fast varying coefficients . . . . .	132
6.2.1	Averaging periodic systems . . . . .	132
6.2.2	Computational tools . . . . .	134
6.2.3	Analytical tools . . . . .	135
6.3	General case . . . . .	137
6.3.1	Collocation scheme . . . . .	137
6.3.2	Computation of stability determining eigenvalues . . . . .	138
6.3.3	Computation of stability regions . . . . .	139
6.3.4	Special cases . . . . .	140
6.3.5	Comparison with the averaging based approach . . . . .	141
6.4	Illustrative examples . . . . .	141
6.4.1	Variable spindle speed cutting machine . . . . .	141
6.4.2	Forced elastic column . . . . .	143
6.5	Notes and references . . . . .	145
<b>II</b>	<b>Stabilization and robust stabilization</b>	<b>147</b>
<b>7</b>	<b>The continuous pole placement method</b>	<b>149</b>
7.1	Introduction . . . . .	149
7.2	Motivation . . . . .	150
7.2.1	A finite-dimensional controller for an infinite-dimensional problem . . . . .	150
7.2.2	Methods based on prediction . . . . .	153
7.2.3	Scalar example . . . . .	154
7.3	Continuous pole placement algorithm . . . . .	155
7.3.1	Description of the algorithm . . . . .	155
7.3.2	Theoretical properties . . . . .	159
7.3.3	Optimization point of view . . . . .	160
7.4	Illustrative examples . . . . .	162
7.4.1	Model problem: stabilizing a third-order system . . . . .	162
7.4.2	General stabilization problems . . . . .	165
7.5	Extensions of state feedback . . . . .	170
7.5.1	Multiple input, multiple output systems . . . . .	170
7.5.2	Observer based controllers . . . . .	171
7.5.3	Finite-dimensional dynamic state feedback . . . . .	173
7.6	Systems of neutral type . . . . .	173
7.6.1	Algorithm . . . . .	173

7.6.2	Illustrative example . . . . .	175
7.7	Notes and references . . . . .	175
<b>8</b>	<b>Stabilizability with delayed feedback: a numerical case study</b>	<b>177</b>
8.1	Introduction . . . . .	177
8.2	Characterization of stabilizable systems . . . . .	178
8.2.1	System representation . . . . .	178
8.2.2	Class of stabilizable systems for the unit delay . . . . .	179
8.2.3	Class of stabilizable systems for arbitrary delay values .	184
8.2.4	Discussion . . . . .	186
8.2.5	Nongeneric system matrix . . . . .	187
8.3	Simultaneous stabilization over a delay interval . . . . .	188
8.4	Notes and references . . . . .	190
<b>9</b>	<b>The robust stabilization problem</b>	<b>193</b>
9.1	Introduction . . . . .	193
9.2	Stability radii as robustness measures . . . . .	194
9.3	Stabilization versus robust stabilization . . . . .	195
9.4	Robust stabilization procedure . . . . .	196
9.4.1	Continuity properties . . . . .	196
9.4.2	Algorithm . . . . .	198
9.5	Illustrative example . . . . .	201
9.6	Notes and references . . . . .	203
<b>10</b>	<b>Stabilization using a direct eigenvalue optimization approach</b>	<b>205</b>
10.1	Introduction . . . . .	205
10.2	Eigenvalue optimization approach . . . . .	206
10.2.1	Smoothness properties of spectral abscissa function . .	206
10.2.2	Gradient sampling algorithm . . . . .	207
10.2.3	Application to linear time-delay systems . . . . .	211
10.2.4	Extension to nonlinear time-delay systems . . . . .	212
10.3	Illustrative examples . . . . .	213
10.3.1	Model problem: a third-order system . . . . .	213
10.3.2	Semiconductor laser . . . . .	213
10.4	Notes and references . . . . .	216
<b>III</b>	<b>Applications</b>	<b>217</b>
<b>11</b>	<b>Stabilization by delayed output feedback: single delay case</b>	<b>219</b>
11.1	Introduction . . . . .	219
11.2	Characterization of all stabilizable second-order systems .	220
11.3	Necessary conditions for stabilizability . . . . .	226
11.4	Controller construction . . . . .	227
11.4.1	Prerequisites . . . . .	227
11.4.2	Stabilization using the delay parameter . . . . .	229

---

11.5	11.4.3 Stabilization using the delay and gain parameter . . . . .	234
	Geometry of stability regions . . . . .	235
11.5.1	Identification of crossing points . . . . .	235
11.5.2	Classification of stability crossing curves, smoothness, and crossing directions . . . . .	238
11.6	Illustrative examples . . . . .	241
11.6.1	Second-order system . . . . .	241
11.6.2	Sixth-order system . . . . .	242
11.7	Notes and references . . . . .	245
<b>12</b>	<b>Stabilization by delayed output feedback: multiple delay case</b>	<b>247</b>
12.1	Introduction . . . . .	247
12.2	Necessary conditions for stabilizability . . . . .	248
12.3	Stabilization of multiple integrators . . . . .	249
12.3.1	Control laws based on numerical differentiation with back- ward differences . . . . .	249
12.3.2	Control laws based on exact pole placement and low-gain design . . . . .	252
12.4	Illustrative example . . . . .	255
12.5	Notes and references . . . . .	255
<b>13</b>	<b>Congestion control algorithms in networks</b>	<b>257</b>
13.1	Algorithms for single connection models with two delays . . . . .	258
13.1.1	Model and related remarks . . . . .	258
13.1.2	Linear stability analysis . . . . .	260
13.1.3	Interpretations and discussions . . . . .	263
13.2	TCP/AQM congestion avoidance models with one delay . . . . .	266
13.2.1	Model and related remarks . . . . .	266
13.2.2	Transformation . . . . .	267
13.2.3	Stability analysis . . . . .	268
13.3	Notes and references . . . . .	273
<b>14</b>	<b>Smith predictor for stable systems: delay sensitivity analysis</b>	<b>275</b>
14.1	Introduction . . . . .	275
14.2	Sensitivity of stability w.r.t. infinitesimal delay mismatches . . . . .	277
14.2.1	Instability mechanism . . . . .	277
14.2.2	Conditions for practical stability . . . . .	278
14.3	Stability analysis and critical delay mismatches . . . . .	282
14.4	Geometry of stability regions . . . . .	284
14.4.1	Identification of crossing points . . . . .	284
14.4.2	Stability crossing curves: smoothness and crossing direc- tions . . . . .	285
14.5	Illustrative example . . . . .	286
14.6	Multivariable case . . . . .	287
14.6.1	Practical stability condition . . . . .	288
14.6.2	Stability domain . . . . .	289

14.7	Notes and references . . . . .	291
<b>15</b>	<b>Controlling unstable systems using finite spectrum assignment</b>	<b>293</b>
15.1	Introduction . . . . .	293
15.2	Preliminaries . . . . .	294
15.3	Implementation of the integral . . . . .	296
15.3.1	Instability mechanism . . . . .	296
15.3.2	Stability conditions . . . . .	297
15.3.3	Removing restrictions . . . . .	301
15.4	Delay mismatch . . . . .	304
15.5	Output feedback . . . . .	304
15.5.1	Static output feedback . . . . .	305
15.5.2	Dynamic output feedback and relations with Smith Pre-dictors . . . . .	305
15.6	Notes and references . . . . .	307
<b>16</b>	<b>Consensus problems in traffic flow applications</b>	<b>309</b>
16.1	Introduction . . . . .	309
16.2	Extension of stability theory to systems with distributed delays . . . . .	312
16.3	Conditions for the realization of a consensus . . . . .	316
16.3.1	Prerequisites . . . . .	316
16.3.2	Computation of stability regions . . . . .	317
16.4	Examples . . . . .	320
16.5	Other models . . . . .	322
16.6	Notes and references . . . . .	324
<b>17</b>	<b>Stability analysis of delay models in biosciences</b>	<b>325</b>
17.1	Introduction . . . . .	325
17.2	Delay effects on stability in some human respiration models . . . . .	326
17.2.1	Delay model and its linearization . . . . .	326
17.2.2	Stability analysis and delay intervals . . . . .	327
17.2.3	Discussions and interpretations . . . . .	330
17.3	Delays in immune dynamics model of leukemia . . . . .	331
17.3.1	Delay model and its linearization . . . . .	331
17.3.2	Stability analysis in the delay-parameter space . . . . .	332
17.3.3	Illustrative example and discussions . . . . .	338
17.4	Notes and references . . . . .	342
<b>Appendix</b>		<b>345</b>
A.1	Rouché's theorem . . . . .	345
A.2	Structured singular value (ssv) . . . . .	345
A.3	Continuity properties . . . . .	347
A.4	Interdependency of numbers . . . . .	347
A.5	Software . . . . .	348
