<b>Preface</b>	<b>xxiii</b>
<b>Acknowledgments</b>	<b>xxv</b>
Chapter 1 Introduction to the Book	1
1.1 What Is the Purpose of This Book?	1
1.2 Major Challenges in Information Fusion	7
1.3 Why Random Sets—or FISST?	8
1.3.1 Why Isn't Multitarget Filtering Straightforward?	9
1.3.2 Beyond Heuristics	10
1.3.3 How Do Single-Target and Multitarget Statistics Differ?	11
1.3.4 How Do Conventional and Ambiguous Data Differ?	11
1.3.5 What Is Formal Bayes Modeling?	13
1.3.6 How Is Ambiguous Information Modeled?	13
1.3.7 What Is Multisource-Multitarget Formal Modeling?	14
1.4 Random Sets in Information Fusion	15
1.4.1 Statistics of Multiobject Systems	15
1.4.2 Statistics of Expert Systems	16
1.4.3 Finite Set Statistics	17
1.5 Organization of the Book	17
1.5.1 Part I: Unified Single-Target Multisource Integration	17
1.5.2 Part II: Unified Multitarget-Multisource Integration	20
1.5.3 Part III: Approximate Multitarget Filtering	21
1.5.4 Appendixes	22

<b>I</b>	<b>Unified Single-Target Multisource Integration</b>	<b>23</b>
Chapter 2	Single-Target Filtering	25
2.1	Introduction to the Chapter	25
2.1.1	Summary of Major Lessons Learned	26
2.1.2	Organization of the Chapter	27
2.2	The Kalman Filter	27
2.2.1	Kalman Filter Initialization	28
2.2.2	Kalman Filter Predictor	28
2.2.3	Kalman Filter Corrector	29
2.2.4	Derivation of the Kalman Filter	30
2.2.5	Measurement Fusion Using the Kalman Filter	32
2.2.6	Constant-Gain Kalman Filters	32
2.3	Bayes Formulation of the Kalman Filter	33
2.3.1	Some Mathematical Preliminaries	34
2.3.2	Bayes Formulation of the KF: Predictor	35
2.3.3	Bayes Formulation of the KF: Corrector	37
2.3.4	Bayes Formulation of the KF: Estimation	40
2.4	The Single-Target Bayes Filter	42
2.4.1	Single-Target Bayes Filter: An Illustration	43
2.4.2	Relationship Between the Bayes and Kalman Filters	45
2.4.3	Single-Target Bayes Filter: Modeling	51
2.4.4	Single-Target Bayes Filter: Formal Bayes Modeling	56
2.4.5	Single-Target Bayes Filter: Initialization	61
2.4.6	Single-Target Bayes Filter: Predictor	61
2.4.7	Single-Target Bayes Filter: Corrector	62
2.4.8	Single-Target Bayes Filter: State Estimation	63
2.4.9	Single-Target Bayes Filter: Error Estimation	64
2.4.10	Single-Target Bayes Filter: Data Fusion	67
2.4.11	Single-Target Bayes Filter: Computation	68
2.5	Single-Target Bayes Filter: Implementation	70
2.5.1	Taylor Series Approximation: The EKF	71
2.5.2	Gaussian-Mixture Approximation	72
2.5.3	Sequential Monte Carlo Approximation	79
2.6	Chapter Exercises	87
Chapter 3	General Data Modeling	89
3.1	Introduction to the Chapter	89
3.1.1	Summary of Major Lessons Learned	91

3.1.2	Organization of the Chapter	91
3.2	Issues in Modeling Uncertainty	92
3.3	Issues in Modeling Uncertainty in Data	94
3.4	Examples	97
3.4.1	Random, Slightly Imprecise Measurements	97
3.4.2	Imprecise, Slightly Random Measurements	101
3.4.3	Nonrandom Vague Measurements	102
3.4.4	Nonrandom Uncertain Measurements	103
3.4.5	Ambiguity Versus Randomness	106
3.5	The Core Bayesian Approach	109
3.5.1	Formal Bayes Modeling in General	109
3.5.2	The Bayes Filter in General	110
3.5.3	Bayes Combination Operators	111
3.5.4	Bayes-Invariant Measurement Conversion	113
3.6	Formal Modeling of Generalized Data	114
3.7	Chapter Exercise	117
<b>Chapter 4</b>	<b>Random Set Uncertainty Representations</b>	<b>119</b>
4.1	Introduction to the Chapter	119
4.1.1	Summary of Major Lessons Learned	119
4.1.2	Organization of the Chapter	120
4.2	Universes, Events, and the Logic of Events	120
4.3	Fuzzy Set Theory	121
4.3.1	Fuzzy Logics	122
4.3.2	Random Set Representation of Fuzzy Events	123
4.3.3	Finite-Level Fuzzy Sets	126
4.3.4	Copula Fuzzy Logics	129
4.3.5	General Random Set Representations of Fuzzy Sets	131
4.4	Generalized Fuzzy Set Theory	133
4.4.1	Random Set Representation of Generalized Fuzzy Events	134
4.5	Dempster-Shafer Theory	134
4.5.1	Dempster's Combination	136
4.5.2	"Zadeh's Paradox" and Its Misinterpretation	138
4.5.3	Converting b.m.a.s to Probability Distributions	141
4.5.4	Random Set Representation of Uncertain Events	143
4.6	Fuzzy Dempster-Shafer Theory	144
4.6.1	Random Set Representation of Fuzzy DS Evidence	145

4.7	Inference Rules	147
4.7.1	What Are Rules?	147
4.7.2	Combining Rules Using Conditional Event Algebra	148
4.7.3	Random Set Representation of First-Order Rules	150
4.7.4	Random Set Representation of Composite Rules	151
4.7.5	Random Set Representation of Second-Order Rules	152
4.8	Is Bayes Subsumed by Other Theories?	152
4.9	Chapter Exercises	154
Chapter 5 UGA Measurements		157
5.1	Introduction to the Chapter	157
5.1.1	Notation	158
5.1.2	Summary of Major Lessons Learned	159
5.1.3	Organization of the Chapter	161
5.2	What Is a UGA Measurement?	162
5.2.1	Modeling UGA Measurements	162
5.2.2	Modeling the Generation of UGA Measurements	164
5.3	Likelihoods for UGA Measurements	164
5.3.1	Special Case: $\Theta$ Is Statistical	165
5.3.2	Special Case: $\Theta$ Is Fuzzy	166
5.3.3	Special Case: $\Theta$ Is Generalized Fuzzy	169
5.3.4	Special Case: $\Theta$ Is Discrete/Dempster-Shafer	171
5.3.5	Special Case: $\Theta$ Is Fuzzy Dempster-Shafer	173
5.3.6	Special Case: $\Theta$ Is a First-Order Fuzzy Rule	174
5.3.7	Special Case: $\Theta$ Is a Composite Fuzzy Rule	179
5.3.8	Special Case: $\Theta$ Is a Second-Order Fuzzy Rule	180
5.4	Bayes Unification of UGA Fusion	181
5.4.1	Bayes Unification of UGA Fusion Using Normalized and Unnormalized Dempster's Combinations	185
5.4.2	Bayes Unification of UGA Fusion Using Normalized and Unnormalized Fuzzy Dempster's Combinations	186
5.4.3	Bayes Unification of UGA Fusion Using Copula Fuzzy Conjunctions	186
5.4.4	Bayes Unification of UGA Rule-Firing	187
5.4.5	If $\exists_0$ Is Finite, Then Generalized Likelihoods Are Strict Likelihoods	188

5.4.6	Bayes-Invariant Conversions Between UGA Measurements	189
5.5	Modeling Other Kinds of Uncertainty	194
5.5.1	Modeling Unknown Statistical Dependencies	195
5.5.2	Modeling Unknown Target Types	196
5.6	The Kalman Evidential Filter (KEF)	199
5.6.1	Definitions	204
5.6.2	KEF Predictor	205
5.6.3	KEF Corrector (Fuzzy DS Measurements)	205
5.6.4	KEF Corrector (Conventional Measurements)	207
5.6.5	KEF State Estimation	208
5.6.6	KEF Compared to Gaussian-Mixture and Kalman Filters	208
5.7	Chapter Exercises	209
Chapter 6	AGA Measurements	211
6.1	Introduction to the Chapter	211
6.1.1	Summary of Major Lessons Learned	212
6.1.2	Organization of the Chapter	213
6.2	AGA Measurements Defined	213
6.3	Likelihoods for AGA Measurements	214
6.3.1	Special Case: $\Theta$ and $\Sigma_x$ Are Fuzzy	215
6.3.2	Special Case: $\Theta$ and $\Sigma_x$ Are Generalized Fuzzy	219
6.3.3	Special Case: $\Theta$ and $\Sigma_x$ Are Dempster-Shafer	219
6.3.4	Special Case: $\Theta$ and $\Sigma_x$ Are Fuzzy DS	220
6.4	Filtering with Fuzzy AGA Measurements	221
6.5	Example: Filtering with Poor Data	222
6.5.1	A Robust-Bayes Classifier	223
6.5.2	Simulation 1: More Imprecise, More Random	225
6.5.3	Simulation 2: Less Imprecise, Less Random	225
6.5.4	Interpretation of the Results	232
6.6	Unmodeled Target Types	232
6.7	Example: Target ID Using Link INT Data	238
6.7.1	Robust-Bayes Classifier	240
6.7.2	“Pseudodata” Simulation Results	243
6.7.3	“LONEWOLF-98” Simulation Results	243
6.8	Example: Unmodeled Target Types	244
6.9	Chapter Exercises	245

Chapter 7	AGU Measurements	249
7.1	Introduction to the Chapter	249
7.1.1	Summary of Major Lessons Learned	250
7.1.2	Why Not Robust Statistics?	250
7.1.3	Organization of the Chapter	251
7.2	Random Set Models of UGA Measurements	252
7.2.1	Random Error Bars	252
7.2.2	Random Error Bars: Joint Likelihoods	252
7.3	Likelihoods for AGU Measurements	254
7.4	Fuzzy Models of AGU Measurements	255
7.5	Robust ATR Using SAR Data	260
7.5.1	Summary of Methodology	264
7.5.2	Experimental Ground Rules	266
7.5.3	Summary of Experimental Results	268
Chapter 8	Generalized State-Estimates	271
8.1	Introduction to the Chapter	271
8.1.1	Summary of Major Lessons Learned	273
8.1.2	Organization of the Chapter	274
8.2	What Is a Generalized State-Estimate?	274
8.3	What Is a UGA DS State-Estimate?	275
8.4	Posterior Distributions and State-Estimates	277
8.4.1	The Likelihood of a DS State-Estimate	278
8.4.2	Posterior Distribution Conditioned on a DS State-Estimate	278
8.4.3	Posterior Distributions and Pignistic Probability	279
8.5	Unification of State-Estimate Fusion Using Modified Dempster's Combination	280
8.6	Bayes-Invariant Transformation	280
8.7	Extension to Fuzzy DS State-Estimates	281
8.8	Chapter Exercises	285
Chapter 9	Finite-Set Measurements	287
9.1	Introduction to the Chapter	287
9.1.1	Summary of Major Lessons Learned	287
9.1.2	Organization of the Chapter	288
9.2	Examples of Finite-Set Measurements	288
9.2.1	Ground-to-Air Radar Detection Measurements	288
9.2.2	Air-to-Ground Doppler Detection Measurements	291

9.2.3	Extended-Target Detection Measurements	292
9.2.4	Features Extracted from Images	292
9.2.5	Human-Mediated Features	292
9.2.6	General Finite-Set Measurements	293
9.3	Modeling Finite-Set Measurements?	293
9.3.1	Formal Modeling of Finite-Set Measurements	293
9.3.2	Multiobject Integrals	297
9.3.3	Finite-Set Measurement Models	299
9.3.4	True Likelihoods for Finite-Set Measurements	302
9.3.5	Constructive Likelihood Functions	302
9.4	Chapter Exercises	303

## **II Unified Multitarget-Multisource Integration 305**

Chapter 10	Conventional Multitarget Filtering	307
10.1	Introduction to the Chapter	307
10.1.1	Summary of Major Lessons Learned	308
10.1.2	Organization of the Chapter	311
10.2	Standard Multitarget Models	311
10.2.1	Standard Multitarget Measurement Model	311
10.2.2	Standard Multitarget Motion Model	313
10.3	Measurement-to-Track Association	315
10.3.1	Distance Between Measurements and Tracks	315
10.4	Single-Hypothesis Correlation (SHC)	319
10.4.1	SHC: No Missed Detections, No False Alarms	319
10.4.2	SHC: Missed Detections and False Alarms	320
10.5	Multihypothesis Correlation (MHC)	321
10.5.1	Elements of MHC	323
10.5.2	MHC: No Missed Detections or False Alarms	326
10.5.3	MHC: False Alarms, No Missed Detections	329
10.5.4	MHC: Missed Detections and False Alarms	332
10.6	Composite-Hypothesis Correlation (CHC)	335
10.6.1	Elements of CHC	335
10.6.2	CHC: No Missed Detections or False Alarms	337
10.6.3	CHC: Probabilistic Data Association (PDA)	337
10.6.4	CHC: Missed Detections, False Alarms	338
10.7	Conventional Filtering: Limitations	338
10.7.1	Real-Time Performance	338

10.7.2 Is a Hypothesis Actually a State Variable?	340
10.8 MHC with Fuzzy DS Measurements	341
<b>Chapter 11 Multitarget Calculus</b>	<b>343</b>
11.1 Introduction to the Chapter	343
11.1.1 Transform Methods in Conventional Statistics	344
11.1.2 Transform Methods in Multitarget Statistics	345
11.1.3 Summary of Major Lessons Learned	346
11.1.4 Organization of the Chapter	348
11.2 Random Finite Sets	348
11.3 Fundamental Statistical Descriptors	356
11.3.1 Multitarget Calculus—Why?	357
11.3.2 Belief-Mass Functions	359
11.3.3 Multiobject Density Functions and Set Integrals	360
11.3.4 Important Multiobject Probability Distributions	364
11.3.5 Probability-Generating Functionals (p.g.f.s)	370
11.4 Functional Derivatives and Set Derivatives	375
11.4.1 Functional Derivatives	375
11.4.2 Set Derivatives	380
11.5 Key Multiobject-Calculus Formulas	383
11.5.1 Fundamental Theorem of Multiobject Calculus	384
11.5.2 Radon-Nikodým Theorems	385
11.5.3 Fundamental Convolution Formula	385
11.6 Basic Differentiation Rules	386
11.7 Chapter Exercises	394
<b>Chapter 12 Multitarget Likelihood Functions</b>	<b>399</b>
12.1 Introduction to the Chapter	399
12.1.1 Summary of Major Lessons Learned	401
12.1.2 Organization of the Chapter	402
12.2 Multitarget State and Measurement Spaces	403
12.2.1 Multitarget State Spaces	403
12.2.2 Multisensor State Spaces	406
12.2.3 Single-Sensor, Multitarget Measurement Spaces	407
12.2.4 Multisensor-Multitarget Measurement Spaces	408
12.3 The Standard Measurement Model	408
12.3.1 Measurement Equation for the Standard Model	411
12.3.2 Case I: No Target Is Present	412
12.3.3 Case II: One Target Is Present	414

12.3.4	Case III: No Missed Detections or False Alarms	416
12.3.5	Case IV: Missed Detections, No False Alarms	418
12.3.6	Case V: Missed Detections and False Alarms	420
12.3.7	p.g.fl.s for the Standard Measurement Model	421
12.4	Relationship with MHC	422
12.5	State-Dependent False Alarms	424
12.5.1	p.g.fl. for State-Dependent False Alarms	426
12.6	Transmission Drop-Outs	426
12.6.1	p.g.fl. for Transmission Drop-Outs	427
12.7	Extended Targets	427
12.7.1	Single Extended Target	428
12.7.2	Multiple Extended Targets	430
12.7.3	Poisson Approximation	431
12.8	Unresolved Targets	432
12.8.1	Point Target Clusters	434
12.8.2	Single-Cluster Likelihoods	435
12.8.3	Multicluster Likelihoods	442
12.8.4	Continuity of Multicluster Likelihoods	444
12.9	Multisource Measurement Models	445
12.9.1	Conventional Measurements	445
12.9.2	Generalized Measurements	447
12.10	A Model for Bearing-Only Measurements	448
12.10.1	Multitarget Measurement Model	450
12.10.2	Belief-Mass Function	451
12.10.3	Multitarget Likelihood Function	452
12.11	A Model for Data-Cluster Extraction	452
12.11.1	Finite-Mixture Models	453
12.11.2	A Likelihood for Finite-Mixture Modeling	456
12.11.3	Extraction of Soft Data Classes	457
12.12	Chapter Exercises	458
Chapter 13	Multitarget Markov Densities	461
13.1	Introduction to the Chapter	461
13.1.1	Summary of Major Lessons Learned	465
13.1.2	Organization of the Chapter	466
13.2	“Standard” Multitarget Motion Model	466
13.2.1	Case I: At Most One Target Is Present	469
13.2.2	Case II: No Target Death or Birth	470

13.2.3	Case III: Target Death, No Birth	471
13.2.4	Case IV: Target Death and Birth	471
13.2.5	Case V: Target Death and Birth with Spawning	472
13.2.6	p.g.fl.s for the Standard Motion Model	473
13.3	Extended Targets	474
13.4	Unresolved Targets	475
13.4.1	Intuitive Dynamic Behavior of Point Clusters	475
13.4.2	Markov Densities for Single Point Clusters	476
13.4.3	Markov Densities for Multiple Point Clusters	477
13.5	Coordinated Multitarget Motion	478
13.5.1	Simple Virtual Leader-Follower	478
13.5.2	General Virtual Leader-Follower	481
13.6	Chapter Exercises	482
Chapter 14 The Multitarget Bayes Filter		483
14.1	Introduction to the Chapter	483
14.1.1	Summary of Major Lessons Learned	484
14.1.2	Organization of the Chapter	486
14.2	Multitarget Bayes Filter: Initialization	486
14.2.1	Initialization: Multitarget Poisson Process	486
14.2.2	Initialization: Target Number Known	487
14.3	Multitarget Bayes Filter: Predictor	487
14.3.1	Predictor: No Target Birth or Death	489
14.4	Multitarget Bayes Filter: Corrector	490
14.4.1	Conventional Measurements	490
14.4.2	Generalized Measurements	493
14.4.3	Unified Multitarget-Multisource Integration	493
14.5	Multitarget Bayes Filter: State Estimation	494
14.5.1	The Failure of the Classical State Estimators	494
14.5.2	Marginal Multitarget (MaM) Estimator	497
14.5.3	Joint Multitarget (JoM) Estimator	498
14.5.4	JoM and MaM Estimators Compared	501
14.5.5	Computational Issues	504
14.5.6	State Estimation and Track Labeling	505
14.6	Multitarget Bayes Filter: Error Estimation	509
14.6.1	Target Number RMS Deviation	509
14.6.2	Track Covariances	509
14.6.3	Global Mean Deviation	510

14.6.4	Information Measures of Multitarget Dispersion	512
14.7	The JoTT Filter	514
14.7.1	JoTT Filter: Models	516
14.7.2	JoTT Filter: Initialization	518
14.7.3	JoTT Filter: Predictor	519
14.7.4	JoTT Filter: Corrector	520
14.7.5	JoTT Filter: Estimation	520
14.7.6	JoTT Filter: Error Estimation	523
14.7.7	SMC Implementation of JoTT Filter	523
14.8	The p.g.fl. Multitarget Bayes Filter	528
14.8.1	The p.g.fl. Multitarget Predictor	528
14.8.2	The p.g.fl. Multitarget Corrector	530
14.9	Target Prioritization	531
14.9.1	Tactical Importance Functions (TIFs)	533
14.9.2	The p.g.fl. for a TIF	533
14.9.3	The Multitarget Posterior for a TIF	535
14.10	Chapter Exercises	537

### **III Approximate Multitarget Filtering 539**

Chapter 15	Multitarget Particle Approximation	541
15.1	Introduction to the Chapter	541
15.1.1	Summary of Major Lessons Learned	542
15.1.2	Organization of the Chapter	543
15.2	The Multitarget Filter: Computation	543
15.2.1	Fixed-Grid Approximation	544
15.2.2	SMC Approximation	545
15.2.3	When Is the Multitarget Filter Appropriate?	546
15.2.4	Implementations of the Multitarget Filter	547
15.3	Multitarget Particle Systems	551
15.4	M-SMC Filter Initialization	554
15.4.1	Target Number is Known	554
15.4.2	Null Multitarget Prior	555
15.4.3	Poisson Multitarget Prior	555
15.5	M-SMC Filter Predictor	556
15.5.1	Persisting and Disappearing Targets	557
15.5.2	Appearing Targets	558
15.6	M-SMC Filter Corrector	560

15.7	M-SMC Filter State and Error Estimation	561
15.7.1	PHD-Based State and Error Estimation	561
15.7.2	Global Mean Deviation	562
15.7.3	Track Labeling for the Multitarget SMC Filter	563
Chapter 16	Multitarget-Moment Approximation	565
16.1	Introduction to the Chapter	565
16.1.1	Single-Target Moment-Statistic Filters	566
16.1.2	First-Order Multitarget-Moment Filtering	568
16.1.3	Second-Order Multitarget-Moment Filtering	572
16.1.4	Summary of Major Lessons Learned	574
16.1.5	Organization of the Chapter	575
16.2	The Probability Hypothesis Density (PHD)	576
16.2.1	First-Order Multitarget Moments	576
16.2.2	PHD as a Continuous Fuzzy Membership Function	579
16.2.3	PHDs and Multitarget Calculus	580
16.2.4	Examples of PHDs	583
16.2.5	Higher-Order Multitarget Moments	586
16.3	The PHD Filter	587
16.3.1	PHD Filter Initialization	587
16.3.2	PHD Filter Predictor	587
16.3.3	PHD Filter Corrector	590
16.3.4	PHD Filter State and Error Estimation	595
16.3.5	Target ID and the PHD Filter	599
16.4	Physical Interpretation of PHD Filter	599
16.4.1	Physical Interpretation of PHD Predictor	600
16.4.2	Physical Interpretation of PHD Corrector	603
16.5	Implementing the PHD Filter	609
16.5.1	Survey of PHD Filter Implementations	610
16.5.2	SMC-PHD Approximation	615
16.5.3	GM-PHD Approximation	623
16.6	Limitations of the PHD Filter	631
16.7	The Cardinalized PHD (CPHD) Filter	632
16.7.1	CPHD Filter Initialization	633
16.7.2	CPHD Filter Predictor	634
16.7.3	CPHD Filter Single-Sensor Corrector	636
16.7.4	CPHD Filter State and Error Estimation	639
16.7.5	Computational Complexity of the CPHD Filter	640

16.7.6	CPHD and JoTT Filters Compared	641
16.8	Physical Interpretation of CPHD Filter	642
16.9	Implementing the CPHD Filter	642
16.9.1	Survey of CPHD Filter Implementations	643
16.9.2	Particle Approximation (SMC-CPHD)	644
16.9.3	Gaussian-Mixture Approximation (GM-CPHD)	646
16.10	Deriving the PHD and CPHD Filters	649
16.10.1	Derivation of PHD and CPHD Predictors	650
16.10.2	Derivation of PHD and CPHD Correctors	651
16.11	Partial Second-Order Filters?	652
16.12	Chapter Exercise	653
<b>Chapter 17</b>	<b>Multi-Bernoulli Approximation</b>	<b>655</b>
17.1	Introduction to the Chapter	655
17.1.1	p.g.fl.-Based Multitarget Approximation	655
17.1.2	Why Multitarget Multi-Bernoulli Processes?	657
17.1.3	The Multitarget Multi-Bernoulli Filter	657
17.1.4	The Para-Gaussian Filter	658
17.1.5	Summary of Major Lessons Learned	659
17.1.6	Organization of the Chapter	660
17.2	Multitarget Multi-Bernoulli Filter	660
17.2.1	MeMber Filter Initialization	661
17.2.2	MeMber Filter Predictor	661
17.2.3	MeMber Filter Corrector	662
17.2.4	MeMber Filter Pruning and Merging	665
17.2.5	MeMber Filter State and Error Estimation	666
17.2.6	Relationship with the Moreland-Challa Filter	667
17.3	Para-Gaussian Filter	668
17.3.1	Para-Gaussian Filter Initialization	669
17.3.2	Para-Gaussian Filter Predictor	669
17.3.3	Para-Gaussian Filter Corrector	671
17.3.4	Para-Gaussian Filter Pruning and Merging	673
17.3.5	Para-Gaussian Filter State and Error Estimation	675
17.4	MeMber Filter Derivation	675
17.4.1	Derivation of the MeMber Filter Predictor	675
17.4.2	Derivation of the MeMber Filter Corrector	677
17.5	Chapter Exercise	682
<b>Appendix A</b>	<b>Glossary of Notation</b>	<b>683</b>

A.1	Transparent Notational System	683
A.2	General Mathematics	684
A.3	Set Theory	685
A.4	Fuzzy Logic and Dempster-Shafer Theory	686
A.5	Probability and Statistics	687
A.6	Random Sets	689
A.7	Multitarget Calculus	690
A.8	Finite-Set Statistics	691
A.9	Generalized Measurements	692
Appendix B	Dirac Delta Functions	693
Appendix C	Gradient Derivatives	695
C.1	Relationship with Partial Derivatives	696
C.2	Multidimensional Taylor Series	696
C.3	Multidimensional Extrema	696
Appendix D	Fundamental Gaussian Identity	699
Appendix E	Finite Point Processes	705
E.1	Mathematical Representations of Multiplicity	705
E.2	Random Point Processes	707
E.3	Point Processes Versus Random Finite Sets	708
Appendix F	FISST and Probability Theory	711
F.1	Multiobject Probability Theory	711
F.2	Belief-Mass Functions Versus Probability Measures	713
F.3	Set Integrals Versus Measure Theoretic Integrals	714
F.4	Set Derivatives Versus Radon-Nikodým Derivatives	715
Appendix G	Mathematical Proofs	717
G.1	Likelihoods for First-Order Fuzzy Rules	717
G.2	Likelihoods for Composite Rules	718
G.3	Likelihoods for Second-Order Fuzzy Rules	720
G.4	Unification of DS Combinations	721
G.5	Unification of Rule-Firing	722
G.6	Generalized Likelihoods: $\exists_0$ Is Finite	723
G.7	NOTA for Fuzzy DS Measurements	724
G.8	KEF Predictor	726

G.9 KEF Corrector (Fuzzy DS Measurements)	729
G.10 Likelihoods for AGA Fuzzy Measurements	732
G.11 Likelihoods for AGA Generalized Fuzzy Measurements	733
G.12 Likelihoods for AGA Fuzzy DS Measurements	734
G.13 Interval Argsup Formula	735
G.14 Consonance of the Random State Set $\hat{\Gamma}_z$	736
G.15 Sufficient Statistics and Modified Combination	737
G.16 Transformation Invariance	738
G.17 MHT Hypothesis Probabilities	739
G.18 Likelihood for Standard Measurement Model	742
G.19 p.g.fl. for Standard Measurement Model	745
G.20 Multisensor Multitarget Likelihoods	747
G.21 Continuity of Likelihoods for Unresolved Targets	749
G.22 Association for Fuzzy Dempster-Shafer	751
G.23 JoTT Filter Predictor	753
G.24 JoTT Filter Corrector	755
G.25 p.g.fl. Form of the Multitarget Corrector	757
G.26 Induced Particle Approximation of PHD	758
G.27 PHD Counting Property	760
G.28 GM-PHD Filter Predictor	761
G.29 GM-PHD Filter Corrector	763
G.30 Exact PHD Corrector	765
G.31 GM-CPHD Filter Predictor	767
G.32 GM-CPHD Filter Corrector	768
G.33 MeMber Filter Target Number	771
G.34 Para-Gaussian Filter Predictor	773
G.35 Para-Gaussian Filter Corrector	774
 Appendix H Solutions to Exercises	 777
