Contents

Preface	xi
1 Utility in Decision Theory	1
1.1 Choice under certainty	1
1.2 Basic probability background	5
1.2.1 Probability measures and distributions	5
1.2.2 Integration	17
1.2.3 Notes on topological spaces	31
1.3 Choice under uncertainty	34
1.4 Utilities and risk attitudes	48
1.4.1 Qualitative representations of risk attitudes	48
1.4.2 Notes on convex functions	53
1.4.3 Jensen's inequality	54
1.5 Exercises	55
2 Foundations of Stochastic Dominance	59
2.1 Some preliminary mathematics	59
2.1.1 Approximation of utility functions	60
2.1.2 A fundamental lemma	65
2.2 Deriving representations of preferences	66
2.2.1 Representation for risk neutral individuals	66
2.2.2 Representation for risk averse individuals	68
2.2.3 Representation for risk seeking individuals	69
2.2.4 A subclass of risk averse individuals	70
2.3 Stochastic dominance	76
2.3.1 First-order stochastic dominance	77
2.3.2 Second-order stochastic dominance	81
2.3.3 Third-order stochastic dominance	83
2.4 Exercises	85

3	Issues in Stochastic Dominance	89
3.1	A closer look at the mean-variance rule	89
3.2	Multivariate stochastic dominance	93
3.3	Stochastic dominance via quantile functions	96
3.3.1	First-order stochastic dominance	99
3.3.2	Second-order stochastic dominance	99
3.3.3	Stochastic dominance rule for risk seekers	101
3.4	Exercises	104
4	Financial Risk Measures	107
4.1	The problem of risk modeling	107
4.2	Some popular risk measures	110
4.2.1	Variance	110
4.2.2	Value-at-risk	111
4.2.3	Tail value-at-risk	114
4.3	Desirable properties of risk measures	119
4.4	Exercises	123
5	Choquet Integrals as Risk Measures	129
5.1	Extended theory of measures	129
5.2	Capacities	130
5.3	The Choquet integral	135
5.4	Basic properties of the Choquet integral	142
5.5	Comonotonicity	149
5.6	Notes on copulas	154
5.7	A characterization theorem	161
5.8	A class of coherent risk measures	164
5.9	Consistency with stochastic dominance	172
5.10	Exercises	176
6	Foundational Statistics for Stochastic Dominance	179
6.1	From theory to applications	179
6.2	Structure of statistical inference	182
6.3	Generalities on statistical estimation	189
6.4	Nonparametric estimation	196
6.4.1	The Glivenko-Cantelli theorem	196
6.4.2	Estimating probability density functions	201
6.4.3	Method of excess mass	205
6.4.4	Nonparametric regression	207
6.4.5	Risk estimation	209
6.5	Basics of hypothesis testing	213

6.5.1	The Neyman-Pearson lemma	215
6.5.2	Consistent tests	217
6.5.3	The Kolmogorov-Smirnov statistic	218
6.5.4	Two-sample KS tests	221
6.5.5	Chi-squared testing	222
6.6	Exercises	226
7	Models and Data in Econometrics	233
7.1	Justifications of models	233
7.1.1	The logit model	234
7.1.2	Stochastic volatility	238
7.1.3	Financial risk models	244
7.2	Coarse data	248
7.2.1	Indirect observations in auctions	248
7.2.2	Game theory	250
7.2.3	Measurement-error data in linear models	252
7.2.4	Censored data	253
7.2.5	Missing data	258
7.3	Modeling dependence structure	264
7.3.1	Copulas	264
7.3.2	Copulas for sampling designs	268
7.3.3	Estimation of copulas	270
7.4	Some additional statistical tools	271
7.4.1	Bayesian statistics	271
7.4.2	From linear regression to filtering models	271
7.4.3	Recursive estimation	275
7.4.4	What is a filter?	276
7.4.5	The Kalman filter	278
7.5	Exercises	281
8	Applications to Finance	285
8.1	Diversification	285
8.1.1	Convex stochastic dominance	285
8.1.2	Diversification for risk averters and risk seekers	291
8.2	Diversification on convex combinations	293
8.3	Prospect and Markowitz SD	300
8.3.1	Illustration	304
8.4	Market rationality and efficiency	305
8.4.1	Applications of SD to calendar anomalies	308
8.4.2	Data	309
8.4.3	Results	309

8.5	SD and rationality of momentum effect	318
8.5.1	Evidence on profitability of momentum strategies	319
8.5.2	Data and methodology	321
8.5.3	Profitability of momentum strategy	321
8.5.4	Results of stochastic dominance tests	325
8.5.5	Robustness checks	328
8.6	Exercises	331
9	Applications to Risk Management	333
9.1	Measures of profit/loss for risk analysis	333
9.1.1	SD criterion for decision-making in risk analysis	335
9.1.2	MV criterion for decision-making in risk analysis	337
9.2	REITs and stocks and fixed-income assets	341
9.2.1	Data and methodology	343
9.2.2	Empirical findings	344
9.2.3	Discussion	350
9.3	Evaluating hedge funds performance	351
9.3.1	Data and methodology	354
9.3.2	Discussion	363
9.4	Evaluating iShare performance	364
9.4.1	Data and methodology	365
9.4.2	Results	367
9.4.3	Discussion	374
9.5	Exercises	374
10	Applications to Economics	381
10.1	Indifference curves/location-scale family	381
10.1.1	Portfolio and expected utility	381
10.1.2	A dilemma in using the mean-variance criterion	386
10.2	LS family for n random seed sources	387
10.2.1	Location-scale expected utility	389
10.2.2	Indifference curves	393
10.2.3	Expected versus non-expected LS utility functions	394
10.2.4	Dominance relationships over the LS family	398
10.3	Elasticity of risk aversion and trade	400
10.3.1	International trade and uncertainty	400
10.3.2	LS parameter condition and elasticity	401
10.3.3	Risk and mean effects on international trade	402
10.4	Income inequality	403
10.5	Exercises	406

Appendix	Stochastic Dominance Tests	409
A.1	CAPM statistics	409
A.2	Testing equality of multiple Sharpe ratios	410
A.3	Hypothesis testing	413
A.4	Davidson-Duclos (DD) test	414
A.4.1	Stochastic dominance tests for risk averters	414
A.4.2	Stochastic dominance tests for risk seekers	416
A.5	Barrett and Donald (BD) test	417
A.5.1	Stochastic dominance tests for risk averters	417
A.5.2	Stochastic dominance tests for risk seekers	418
A.6	Linton, Maasoumi and Whang test	419
A.6.1	Stochastic dominance tests for risk averters	419
A.6.2	Stochastic dominance tests for risk seekers	419
A.7	Stochastic dominance tests for MSD and PSD	420
	Bibliography	425
	Index	439
