Stochastic Partial  
Differential  
Equations

A Modeling, White Noise  
Functional Approach

1996  
Birkhäuser  
Boston • Basel • Berlin

# Contents

<b>Preface</b> .....	xi
<b>Chapter 1. Introduction</b> .....	1
1.1. Modeling by stochastic differential equations .....	1
<b>Chapter 2. Framework</b> .....	11
2.1. White noise .....	11
The 1-dimensional, $d$ -parameter smoothed white noise	
The (smoothed) white noise vector	
2.2. The Wiener–Itô chaos expansion .....	18
Chaos expansion in terms of Hermite polynomials	
Chaos expansion in terms of multiple Itô integrals	
2.3. Stochastic test functions and stochastic distributions.	
The Kondratiev spaces $(\mathcal{S})_{\rho}^{m;N}$ , $(\mathcal{S})_{-\rho}^{m;N}$ .....	28
The Hida test function space $(\mathcal{S})$ and the Hida distribution space $(\mathcal{S})^*$	
Singular white noise	
2.4. The Wick product .....	39
Some examples and counterexamples	
2.5. Wick multiplication and Itô/Skorohod integration .....	45
2.6. The Hermite transform .....	56
The characterization theorem for $(\mathcal{S})_{-1}^N$	
Positive noise	
The positive noise matrix	
2.7. The $(\mathcal{S})_{\rho,r}^N$ spaces and the $\mathcal{S}$ -transform .....	68
The $\mathcal{S}$ -transform	
2.8. The topology of $(\mathcal{S})_{-1}^N$ .....	74
Stochastic distribution processes	
2.9. The $\mathcal{F}$ -transform and the Wick product on $L^1(\mu)$ .....	80
Functional processes	
2.10. The Wick product and translation .....	84
2.11. Positivity .....	89
<b>Exercises</b> .....	96

<b>Chapter 3. Applications to stochastic ordinary differential equations</b> .....	105
3.1. Linear equations .....	105
Linear 1-dimensional equations	
Some remarks on numerical simulations	
Some linear multi-dimensional equations	
3.2. A model for population growth in a crowded stochastic environment	110
The general $(\mathcal{S})_{-1}$ solution	
A solution in $L^1(\mu)$	
A comparison of Model A and Model B.	
3.3. A general existence and uniqueness theorem .....	117
3.4. The stochastic Volterra equation .....	120
3.5. Wick products versus ordinary products: A comparison experiment .	128
Variance properties	
3.6. Solution and Wick approximation of quasilinear SDE .....	133
<b>Exercises</b> .....	138
<b>Chapter 4. Stochastic partial differential equations</b> .....	141
4.1. General remarks .....	141
4.2. The stochastic Poisson equation .....	143
The functional process approach	
4.3. The stochastic transport equation .....	146
Pollution in a turbulent medium	
The heat equation with a stochastic potential	
4.4. The stochastic Schrödinger equation .....	150
$L^1(\mu)$ -properties of the solution	
4.5. The viscous Burgers' equation with a stochastic source .....	159
4.6. The stochastic pressure equation .....	166
The smoothed positive noise case	
An inductive approximation procedure	
The 1-dimensional case	
The singular positive case	
4.7. The heat equation in a stochastic, anisotropic medium .....	175
4.8. A class of quasilinear parabolic SPDEs .....	179
4.9. SPDEs driven by Poissonian noise .....	182
<b>Exercises</b> .....	189

<b>Appendix A. The Bochner–Minlos theorem</b> .....	193
<b>Appendix B. A brief review of Itô calculus</b> .....	199
The Itô formula	
Stochastic differential equations	
The Girsanov theorem	
<b>Appendix C. Properties of Hermite polynomials</b> .....	207
<b>Appendix D. Independence of bases in Wick products</b> .....	298
<b>References</b> .....	217
<b>List of frequently used notation and symbols</b> .....	223
<b>Index</b> .....	227
