1. BASIC CONCEPTS AND DEFINITIONS OF GRAPH THEORY 1

1.1 Introduction 1
1.2 Basic Definitions 2
1.2.1 Definition of a Graph 2
1.2.2 Adjacency and Incidence 3
1.2.3 Isomorphic Graphs 4
1.2.4 Graph Operations 4
1.2.5 Walks, Trials and Paths 5
1.2.6 Connectedness 6
1.2.7 Cycles and Cut Sets 6
1.2.8 Trees, Spanning Trees and Shortest Route Trees 7
1.3 Different Types of Graphs 8
1.4 Vector Spaces Associated with a Graph 10
1.4.1 Cycle Space 10
1.4.2 Cut Set Space 11
1.4.3 Orthogonality Property 11
1.4.4 Fundamental Cycle Bases 11
1.4.5 Fundamental Cut Set Bases 12
1.5 Matrices Associated with a Graph 13
1.5.1 Matrix Representation of a Graph 14
1.5.2 Cycle Bases Matrices 17
1.5.3 Cut Set Bases Matrices 19
1.6 Directed Graphs and Their Matrices 21
1.7 Planar Graphs-Euler´s Polyhedra Formula 23
1.7.1 Planar Graphs 23
1.7.2 Theorems for Planarity 25
1.8 Maximal Matching in Bipartite Graphs 27
1.8.1 Definitions 27
1.8.2 Theorems on Matching 27
1.8.3 Maximum Matching 28
Exercises 30

2. TOPOLOGICAL PROPERTIES OF SKELETAL STRUCTURES 35

2.1 Introduction 35
2.2 Mathematical Model of a Skeletal Structure 36
2.3 Union-intersection Method 38
2.3.1 A Unifying Function 40
2.3.2 An Expansion Process 41
2.3.3 An Intersection Theorem 42

2.3.4 A Method for Determining the DKI and DSI of Structures 45
2.3.5 Modifications on a Structure 52
2.4 Identification Method 54
2.5 The DSI of Structures; Special Methods 56
2.6 Space Structures and Their Planar Drawings 62
2.6.1 Admissible Drawing of a Space Structure 62
2.6.2 The Degree of Statical Indeterminacy of Frames 63
2.6.3 The Degree of Statical Indeterminacy of Space Trusses 66
2.6.4 Suboptimal Drawing of a Space Structure 68
Exercises 74

3. RIGIDITY OF SKELETAL STRUCTURES 77

3.1 Introduction 77
3.2 Definitions 78
3.3 Complete Matching for the Recognition of Generic Independence 82
3.4 A Decomposition Approach for the Recognition of Generic Independence 85
3.5 Special Methods for Rigidity of Planar Trusses 87
3.5.1 Simple Trusses 87
3.5.2 Trusses in the Form of 2-trees 89
3.5.3 A γ-tree and its Rigidity 89
3.5.4 Grid-form Trusses with Bracings 91
3.6 Connectivity and Rigidity 93
Exercises 95

4. NETWORK FORMULATION OF STRUCTURAL ANALYSIS 97

4.1 Introduction 97
4.2 Theory of Networks 99
4.3 Basic Concepts of Network Theory 100
4.3.1 Topological Properties of Networks 100
4.3.2 Algebraic Properties of Networks 103
4.3.3 Formulation of Network Analysis 109
4.4 Formulation of Structural Analysis 111
Exercises 115

5. MATRIX DISPLACEMENT METHOD 117

5.1 Introduction 117
5.2 Formulation 117
5.3 Element Stiffness Matrices 129
5.3.1 Stiffness Matrix of a General Element 129
5.3.2 Stiffness Matrix of a Bar Element 131
5.3.3 Stiffness Matrix of a Beam Element 136
5.4 Overall Stiffness Matrix of a Structure 139

5.5 General Loading 142
5.6 Computational Aspects of the Matrix Displacement Method 143
Exercises 145

6. MATRIX FORCE METHOD 149

6.1 Introduction 149
6.2 Formulation 150
6.3 Generalized Cycle Bases of a Graph 155
6.4 Minimal and Optimal Generalized Cycle Bases 158
6.5 Pattern Equivalence of Flexibility and Cycle Adjacency Matrices 160
6.6 Minimal GCB of a Graph 160
6.7 Selection of a Subminimal GCB: Practical Methods 161
6.7.1 Method 1 161
6.7.2 Method 2 162
6.7.3 Method 3 163
6.8 Force Method for the Analysis of Rigid-jointed Skeletal Structures 164
6.8.1 Cycle Bases Selection: Topological Methods 165
6.8.2 Cycle Bases Selection: Graph-theoretical Methods 168
6.8.3 Formation of $\mathbf{B}_0$ and $\mathbf{B}_1$ Matrices 184
6.9 Force Method for the Analysis of Pin-jointed Planar Trusses 187
6.9.1 Associate Graphs for Selection of a Subminimal GCB 188
6.10 Analysis of General Structures by the Force Method 194
6.10.1 Algebraic Methods 195
6.10.2 Algebraic-topological Methods 199
Exercises 202

7. ORDERING FOR BANDWIDTH AND PROFILE OPTIMIZATION 205

7.1 Introduction 205
7.2 Preliminaries 207
7.3 Pattern Equivalence of Stiffness and Cut Set Adjacency Matrices 210
7.4 A Shortest Route Tree and its Properties 211
7.5 Nodal Ordering for Bandwidth Optimization 212
7.5.1 A Good Starting Node 213
7.5.2 Primary Nodal Decomposition 218
7.5.3 Transversal P of an SRT 219
7.5.4 Nodal Ordering 220
7.5.5 Examples 221
7.6 A Connectivity Coordinate System for Nodal Ordering 222
7.6.1 A Connectivity Coordinate System for Planar Graphs 223
7.6.2 A Connectivity Coordinate System for Space Graphs 224
7.7 Nodal Numbering for Profile Reduction 226
7.8 Graph-theoretical Interpretation of Gaussian Elimination 228
7.9 Element Ordering for Bandwidth Optimization of Flexibility Matrices 230

7.9.1 An Associate Graph 231
7.9.2 Distance Number of an Element 231
7.9.3 Element Ordering Algorithms 232
7.9.4 Example 233
7.10 Nodal Numbering for Finite Element Models 234
7.11 Bandwidth Reduction for Rectangular Matrices 235
7.11.1 Definitions 236
Exercises 240

8. CONDITIONING OF STRUCTURAL MATRICES 243

8.1 Introduction 243
8.2 Condition Numbers 244
8.2.1 The Ratio of Extreme Eigenvalues 245
8.2.2 Determinant of a Row Normalized Matrix 248
8.2.3 The Ratio of Determinants 248
8.3 Weighted Graph and an Admissible Member 249
8.4 Optimally Conditioned Cycle Bases 250
8.4.1 Formulation of the Problem 252
8.5 Suboptimally Conditioned Cycle Bases 252
8.5.1 Algorithm A 253
8.5.2 Algorithm B 255
8.5.3 Algorithm C 256
8.5.4 Examples 258
8.6 Optimally Conditioned Cut Set Bases 261
8.6.1 Mathematical Formulation of the Problem 261
8.7 Suboptimally Conditioned Cut Set Bases 262
8.7.1 Algorithm 263
8.7.2 Example 264
Exercises 265

9. MATROIDS AND SKELETAL STRUCTURES 267

9.1 Introduction 267
9.2 Axiom Systems for a Matroid 268
9.2.1 Definition in terms of Independence 268
9.2.2 Definition in terms of Bases 269
9.2.3 Definition in terms of Circuits 269
9.2.4 Definition in terms of Rank 269
9.3 Matroids Relevant to Structural Mechanics 270
9.3.1 A Basis for a Finite Vector Space 270
9.3.2 A Basis for Cycle Space of a Graph 271
9.3.3 A Basis for Cut Set Space of a Graph 271
9.3.4 Cycle Matroid of a Graph 272
9.3.5 Cocycle Matroid of a Graph 273
9.3.6 Rigidity Matroid of a Graph 274
9.3.7 Matroid for Null Basis of a Matrix 275

9.4 Combinatorial Optimization: the Greedy Algorithm 276
9.5 Application of the Greedy Algorithm to the Force Method, A Combinatorial Approach 278
9.6 Problems with Application of the Greedy Algorithm 279
9.7 Concluding Remarks 282
Exercises 282

10 A GRAPH THEORETICAL APPROACH FOR CONFIGURATION PROCESSING 285

10.1 Introduction 285
10.2 Mathematical Elements of Configuration Processing 286
10.3 Operations on Graphs and Their Representations 289
10.4 Special Graphs 291
10.5 Some Useful Functions for Configuration Processing 293
10.5.1 Translation Functions 294
10.5.2 Rotation Functions 297
10.5.3 Reflection Functions 299
10.5.4 Projection Functions 301
10.6 Geometry of Structures 302
10.7 Extension to Hypergraphs 304
Exercises 306
