## ABSTRACT

This monograph provides an overview of structured group approaches which supply both effective learning strategies and interpersonal environments in which people can seek to achieve higher levels of personal competence and nurture feelings of inner satisfaction with the direction of their lives. These approaches should be viewed as educational tools whose implementation at the appropriate point in the evolution of an individual's development can facilitate positive growth. The monograph attempts to demonstrate the degree to which the structured group movement has matured and enhanced the ability of helping professionals to help people resolve both existing problems and developmental needs. The monograph presents the theoretical basis for structured groups and the critical elements in their design. Three major categories of structured groups (life skills, life theme, and life transition groups), their core components, and models for their development and implementation are described. Specific examples of activities for skill development are presented for each structured group. The issue of deployment of resources in utilizing these approaches, and future needs and directions for employing structured developmental groups are also discussed. The appendix and references provide useful information (with addresses) for the reader. (Author/HM)

**Structured Groups for Facilitating Development:  
Acquiring Life Skills, Resolving Life Themes,  
and Making Life Transitions**

**David J. Drum  
J. Eugene Knott**

In this introductory chapter the authors define structured groups, categorize them into three basic types, and speak to the various theoretical bases from which they have emerged. Key to the importance of the structured group effort is the fact that these groups are preventive as well as remedial and can be helpful to persons of all ages. The introduction concludes with several statements that support the use of the structured groups approach.

## Chapter I

### Origin of Structured Groups

The purpose of this monograph is to provide an overview of a relatively new style of helping people that can facilitate their growth and development. Within the past five years, a substantial number of highly structured group programs aimed at teaching key skills or clarifying important life attributes has been devised. These structured group approaches supply both effective learning strategies and interpersonal environments in which people can seek to achieve higher levels of personal competence and nurture feelings of inner satisfaction with the direction of their lives.

Structured groups are not to be viewed merely as a contemporary extension of the human potential movement, although some roots may be perceived therein. Rather, these approaches should be viewed as educational tools whose implementation at the appropriate point in the evolution of an individual's development can facilitate positive growth. This monograph attempts to demonstrate the degree to which the structured group movement has matured and enhanced the ability of helping professionals to help people resolve both existing problems and developmental needs. To achieve this goal the monograph provides an overview of the theoretical basis for structured groups and the critical elements in their design. Following that, three major categories of structured groups, their core components, and models for their development and implementation are described. Subsequent chapters present specific exemplars of each of the three major types of groups, their formats, and characteristics. Finally, the monograph addresses

the issue of deployment of resources in utilizing such approaches to serve one's clientele, and the future needs of and directions for employing structured developmental groups.

#### Definition of Structured Groups

A structured group is a delimited learning situation with a predetermined goal and a plan designed to enable each group member to reach that identified goal with minimum frustration and maximum ability to transfer the new learning to a wide range of life events. The use of structure in counseling groups allows the group facilitator: (1) to focus precisely on a specific goal and include relevant goal-oriented activities while eliminating goal-detracting influences, (2) to converge resources and exercises in order to amplify learning, and (3) to assess the degree of goal accomplishment for each participant. These three primary values of structuring, plus some other features, are highlighted by Middleman and Goldberg (1972) in their article on "The Concept of Structure in Experiential Learning." They state:

"A structured learning situation is a closed system, deliberately constructed and set in motion by the trainer or facilitator. It has a boundary which separates it from the talk about the situation as well. . . . Within this boundary a set of conditions is established which affects the roles and/or rules, and/or the processes of interaction. Finally, the trainer or facilitator introduces a task to be pursued under the structured conditions. This task constitutes the moving dynamics of the learning situation. Participants must function within those particular conditions and experience both the opportunities for and constraints on pursuit of the task and human behavior in general that are generated by these conditions" (p. 205).

For the purpose of clarifying the theoretical basis and differentiating the goals of structured groups, they may be categorized into three basic types: (1) those aimed at helping individuals acquire important interpersonal life skills, (2) those directed toward enabling people to resolve and understand critical life themes, and (3) those designed to assist people in the completion/making of important life transitions. Each of these three categories of structured groups is the topic of a later chapter in this monograph.

### Theoretical Basis of Structured Groups

The emergence of the structured group model is grounded in several broader movements that have been gaining momentum with the helping services professions. These movements have been variously identified as affective education (Leonard, 1968; Borton, 1970; Brown, 1971; Purves, 1972; Castillo, 1974), psychological education (Alschuler, 1973; Guerney, et al. 1970; Mosher and Sprinthall, 1971; Ivey and Alschuler, 1973), humanistic education (Bessell and Palomares, 1970; Weinstein and Fantini, 1970; Heath, 1971; Zahorik and Brubaker, 1972; Greer and Rubinstein, 1972; Patterson, 1973; Sharp, 1971), personal education/self-management (Bandura and Perloff, 1967; Cudney, 1972; Thoreson and Mahoney, 1974; Williams and Long, 1975; Colley, 1975), or behavior modification (Goldiamond, 1965; Bandura, 1969; Lazarus, 1971).

Structured groups represent a convergence of many of these rather divergent helping styles, with each approach contributing some important elements both to the theory and design of a particular group. A common element apparent

in almost all of these approaches is the emphasis placed on the educational-experiential format for overcoming difficulties or producing growth, rather than the more traditional one-to-one verbal process method of helping.

While the broad theoretical basis for structured groups is grounded in the approaches just identified, the specific goal of such groups is facilitating the developmental process and increasing the individual's adaptability to common life stresses. All too often the growth and development of the individual and his/her ability to handle life traumas have been left to chance resolution. In our own lives and the lives of people who surround us, one may find numerous examples of the unnecessary, non-productive turmoil that occurs because no one offered assistance when individuals were at developmental crossroads or undergoing some traumatic transformation.

#### Facilitating Development

In order to achieve the goal of facilitating the developmental process, structured groups are often designed specifically to resolve a particular developmental task, such as learning to be an effective parent, being able to control anxiety, and/or gaining skill in setting realistic career/life goals. The study of the developmental tasks which confront individuals in the course of their lifetimes is a relatively recent phenomenon. Only since the late 1930's has there been any systematic study of the various living/learning tasks of development an individual undergoes at various stages in life. But the impact of this way of viewing the needs of people has been mighty. Recognition--both of patterns of developmental needs and individual variability--has spurred numerous studies

and writings, including those by Tryon and Lilienthal, 1950; Havighurst, 1953; Piaget, 1954; Zaccaria, 1965; and Erikson, 1968. In their formulation of the developmental process; these theorists link identifiable growth periods to specific arrays of developmental tasks. As a result of the identification of some predictable, regularly occurring life needs and growth tasks, it is becoming possible to anticipate their emergence and provide for early intervention.

Structured groups represent one important intervention useful in resolving critical developmental tasks when they first arise. Perhaps the most compelling value of the early intervention capability of structured groups is that, by enabling persons to resolve or fulfill a developmental task, they can prevent that normal growth issue from deteriorating and becoming the basis for future life problems. The failure to accomplish adequately an earlier developmental task has been shown time and again to compound the difficulty in fulfilling subsequent needs and tasks in the developmental process. Guardo (1975), in an article on developmental existentialism, clearly illustrates the effect of unresolved problems on normal development in the following example:

"Let us use, as an illustration, a young woman whose father deserted her. If she cites this experience as a reason for her inability to sustain a relationship with a young man, for fear of being deserted again, then the helper must address two issues: the residual psychological effects of the client's experience of desertion and the client's present inability to sustain a heterosexual relationship. The helper should address these issues in their respective temporal contexts and give attention to the progression of interpersonal development that the client has undergone between these times... If the young woman in the above illustration were twenty years old, her situation would be interpreted quite differently from the way it would be if she were twenty-eight, since the developmental expectations for interpersonal maturity vary widely for these ages" (pp. 494-495).

Deteriorated life situations often presage full-blown developmental crises. A client experiences fatality when he/she finds himself/herself immersed in a situational crisis without the wherewithal, because of earlier developmental deficits, to convert the challenge to a satisfactory, growth-producing outcome. The relationship between unresolved developmental needs and the all-consuming vexation experienced in common situational crises is of major consequence. The obvious counseling goal at that point is to assist the individual to find the solution to the crisis. The not-so-obvious secondary goal should be to help the individual learn a response style that will better serve him/her in later attempts to avert such a crisis. The structured developmental group has built into it just such a dual capability. Application of this type of therapeutic strategy thus simultaneously becomes both problem-solving and preventive, and possesses both short- and long-term benefits.

Some other elements in the dynamics of personal development deserve attention. First among these is the dichotomous nature of human development. Just as the nature-nurture paradigm suffuses the whole of the behavioral sciences, so does this duality affect our notions of which developmental tasks antecede others. The potentiality for most, if not all psychological development, is laid down in the hereditary package one receives via genetic transmission. However, whether this potentiality is ever realized or actualized for a particular person is a function of the learning experiences encountered in the environment. And each of the developmental "gains" resulting from the successful integration of earlier learning becomes a prerequisite in the sequence of tasks necessary

for the achievement of further personal competence. Thus, frustration of an early developmental task cannot help but thwart a related future developmental task.

Another interesting facet of the human developmental process is that in terms of both physical and social growth, the time wherein physiological development levels off occurs in close conjunction with the increasing need for expanded affective and interpersonal capabilities. It is also at this time that the individual is faced with the first major set of life "choices." Not coincidentally, this is the "site" of the largest number of structured developmental groups that have been developed to date. Even though late adolescence and early adulthood represent the focus of most structured group efforts, these groups often address developmental issues which originate from earlier, unfulfilled developmental needs.

The contemporary fact of life documented so powerfully by Toffler (1970), which might be referred to as the "constancy of change," provides some indication of why the developmental period known as "adulthood" represents an area of increasing response to structured groups. Contrary to the earliest theories of developmental psychology, recent studies have documented ongoing changes that pose developmental challenges for persons at midlife and later (Levinson, et al. 1974; Lidz, 1968; Gould, 1972; Poland, 1974). The fact that "change" is an ongoing phenomenon, and is occurring at an accelerating pace, demands that individuals acquire certain coping skills and adaptational abilities earlier and exercise them longer than was the case in previous generations,

particularly in Western civilization. In many ways, the ultimate barometer of one's personal competence and self-actualization today is his/her capacity for coping with that "constancy of change."

### Increasing Adapability to Stress

As we have increased our knowledge about the developmental process, we have also become increasingly aware of the deleterious effects that stress has on that process (Lazarus, 1966; Adams and Goldstein, 1970). When stressful circumstances exceed an individual's point of tolerance, his/her whole developmental thrust grinds to a halt. If a person's developmental history is riddled with unresolved needs, then he/she is further vulnerable to the crippling effects of extreme stress.

Most structured groups have the capacity to facilitate the process for working through deeply stressful feelings and at the same time aid in the development of adaptive skills. Therefore, a woman who is in psychological transition--struggling with stressful feelings because, for example, she chooses to be more than a "shadow figure"--can be helped to resolve that stress. At the same time she can be exploring and developing alternative coping skills for enjoying her new style of being. Life transition groups are often designed both for resolving an existing problem and preparing for successful living in a different psychological (and sometimes physical) environment.

### Why Structured Groups?

The question of why should we invest time, energy, and resources in the development of structured groups instead of in the provision of traditional services

can be viewed from several perspectives. First of all, structured groups enable the helping agent to time interventions to correspond as closely as possible to the origination of the developmental need. A serious limitation of traditional methods is that they are unable to provide intervention until long after an unmet developmental need has deteriorated into a deeply troubling problem.

The value of structured group approaches is not limited to the single dimension of timing. They also have several additional positive features for the practitioner and consumer.

Structured groups optimize time for the practitioner. Where particular developmental lags or needs can be diagnosed or anticipated, short-term learning-oriented group experiences can capitalize on what will always be insufficient counseling resources by focusing on specific behavioral components that form the core of the identified need. Offering such learning opportunities in a group format also has the advantage of addressing the similar needs of several people simultaneously. Building on already extant skills to update and vary counseling methodology, they offer a role change to the helping agent that is more in line with that of other "educators" and that epitomizes the proactive stance. Further, the built-in accountability dimension arising from the goal-oriented nature of the groups has tremendous import, especially in current times of limited staff and finances.

Added gains accrue to consumers from a service modality which reaches out to them, often in their own living/working situation, and which is time-limited

and target-specific. An added plus for consumers is the benefit they realize from learning "responsiveness" ("intentionality," in psychological education terminology) to life situations as opposed merely to learning discrete responses to single situations.

### Summary

The introduction to this monograph has touched on the basic nature and genesis of structured groups for facilitating human development, some of the key elements in the process of development, and many of the characteristics that recommend such approaches both to the practitioner and the consumer. The next chapter explores at greater length the core components and some further conceptual tenets of each of the three types of structured developmental groups.

The first section of this chapter describes the value of utilizing structured groups to help people deal with problem situations. Next, the three major categories of structured groups are presented and the core components of each type are identified. A checklist follows for identifying and detailing the critical elements to be included in the development of a structured group. The chapter concludes with a discussion of practical issues and guidelines for implementing structured groups in an agency or institution.

## Chapter II

### Conceptual Overview of Structured Groups

#### Value of Structured Groups

In general, structured groups represent attempts on the part of mental health workers to intervene as early as possible in an individual's life so that unmet normal developmental needs do not become the foundation for more serious problems later in life. Specifically, they are designed to provide opportunity for positive intervention to occur as the need for assistance develops. So, for example, instead of trying to help a person relieve his depression after an unsuccessful marriage, the focus is on intervening earlier to help a person learn how to communicate feelings non-defensively and how to share intimately. This illustration is characteristic of a number of situations in life where structured groups can reduce the likelihood that normal developmental needs will become frustrated and lead to the need for later extensive counseling and therapy.

Besides providing opportunity for early intervention, structured groups have several other positive attributes that make them valuable additions to the mental health worker's repertoire for promoting growth and development. Among the most important are the following:

- (1) They demystify the process of self-discovery and self-enhancement by systematic structuring for goal-attainment. Because the groups have a definite structure, they communicate a sense of goal-directedness and raise expectations that the goal can be achieved.
- (2) They are relatively non-threatening to participants and make the process of self-learning enjoyable. Through appropriate structured exercises they encourage people gently but firmly to increase their ability to try out new behaviors or examine issues they would normally avoid. Most structured groups attempt to raise a person's approach gradient so that he/she will attempt new behaviors or examine delicate issues, while traditional therapy focuses on lowering the avoidance gradient so that new behaviors may emerge.
- (3) They allow for both peer and professional feedback relating to a specific interpersonal skill or life issue. Provisions are made for an individual to reality test, gain consensus, and explore self-enslaving myths. Peer involvement within the group in providing social feedback is a key factor in enabling participants to attempt new and provisional ways of responding to existing problem situations.
- (4) They represent an economical use of treatment time. A significant number of issues or needs that are treated in one-to-one counseling

can be more efficiently and completely resolved through a structured group.

- (5) They encourage change and growth by providing a mechanism for active problem-solving. Group members invest a significant amount of group time in practicing a particular skill, actively clarifying an issue, and structuring a resolution.
- (6) They help participants become aware of the commonality of the type of problem situation they are attempting to resolve. The sense of "being in it together" is not only communicated through the fact that there are ten, twenty, or more participants in the particular group at hand but also that the type of group in which they are involved is being offered on a widespread basis in other locations.
- (7) They reduce the stigma associated with seeking help because they focus on common developmental needs utilizing an education/experiential format. This is in contrast to traditional counseling which is largely remedial or rehabilitative in character.
- (8) They establish the boundaries of the contract between the leader and the participants and thereby create a sense of psychological safety for group members. Each participant can enter into the group experience with a feeling of inner comfort that the group will stick to the stated goal and not attempt to restructure the "whole personality." Many people fear that structured groups are simply sensitivity groups by another name and that their every vulnerability will be exposed and exploited. Through an explanation of the differences between the two

! types of groups, their fears can easily be relieved. The use of structure in groups sets real limits on the power of the leader and on what is legitimate to explore.

### Major Types of Structured Groups

Structured groups can be classified into three general types according to the emphasis the group leader and members place on achieving a specific purpose or goal. The three types are: (1) life skills groups, (2) life theme groups, and (3) life transition groups. While all three types of structured groups have an educational/experiential based format, are goal oriented, and utilize a systematic, sequential approach to resolution of the problem situation, significant differences exist among the three types with regard to their goals. Broadly speaking, life skills groups are designed to help people acquire new skills or complete the development of inadequate skills. Life theme groups center on structuring the self-inquiry process so that an individual can develop a sense of personal understanding that can lead to greater feelings of freedom and individuation. Life transition groups have the twin goals of helping people restructure the past psychologically and build skills for future living. As one can see, each type of group aims at supporting and facilitating the developmental process from a different, yet often complementary, perspective.

#### Life Skills Groups

Life skills groups have as their common purpose helping people acquire or further develop life-enhancing skills that will enable them to cope successfully with the psychological demands of living. As a person's chronological age

increases, especially during the first 18 to 25 years of life, the number of affective and interpersonal skills that must be mastered expands dramatically. Yet, although an individual is expected to develop this wide range of interpersonal skills, their acquisition is often left to chance. In today's society very few ceremonies, programs, or initiation rites remain that will insure the learning of critical life-enhancing skills by a given age (Aries, 1975). Despite this fact, we often show very little tolerance or provide little support for those people who have not learned certain skills by the expected time. The failure to acquire effective interpersonal skills impacts in a decidedly negative fashion on the quality of an individual's life.

Structured life skills groups provide procedures, methods, and systematic techniques to help people develop the affective and interpersonal skills they need to make life worth living. Some of the more common life skills workshops and groups are: Assertive Behavior Training, Academic Survival Skills, Anxiety Management, Life/Work Planning, Behavioral Self-Control, Decision-Making/Problem-Solving, Communication Skills, Interpersonal Skills Training and Parenting Skills.

Core Elements of Life Skill Groups. Certain core elements are consistently stressed in life skills groups. First, in a life skills group the goal is always explicitly stated and is the reason for the group's existence. The leader provides for every participant a clear overview of the purpose of the group and the general methods that will be used to achieve that goal. It is critically important that the stated goal always remain the central focus for each group member. Second, life skills groups try to teach responsiveness to situations

rather than discrete responses. A major goal of each group is to help people develop skill in responding or initiating as opposed to learning pat phrases or stock answers. Third, the typical format for a life skills group involves (a) a blending of didactic and experiential learning, (b) sequential and cumulative building from session to session, (c) out-of-group assignments to reinforce learning and increase generalization to real life, and (d) a predetermined number of sessions to achieve the stated goal. Fourth, virtually all life skills groups involve some pre-selection of clients. Specific selection criteria are established prior to the group that are based on the needs of the individual in relation to the group and the possible negative effects an individual may have on the group process. Fifth, life skills groups require that an atmosphere of mutual trust and cohesiveness exist among the members of the group. Because a large majority of the life skills groups utilize peer feedback as a reality-testing mechanism, it is important that life skills groups are time-limited. The typical length of a group is usually between four and eight sessions and involves a total time commitment of 8 to 16 hours in formal meetings.

Leader Behaviors. Most often the leader takes a very active role during the life of the group by modeling appropriate behavior, role playing difficult or perplexing problems, providing positive reinforcement or constructive criticism, and assigning and reviewing homework. Thus, in order to be an effective facilitator of a life skills group, an individual must be able to communicate clearly, confront constructively, reinforce effectively, focus critical feedback to the task at hand, and understand the complexities of group process. In addition,

the group leader must (1) be willing to adhere to the established goal and avoid turning the group into a non-specific counseling group, (2) have command of a flexible fund of techniques and activities in order to vary the procedures or style used in attaining the goal when group conditions so indicate, (3) be comfortable with a leadership role limited to assisting with the accomplishment of a particular goal and the consequent reduction in power over the group, and (4) be willing to invest as much time and energy in designing and evaluating a particular type of group as in leading the actual group meetings. Since most life skills groups build from a theoretical base which is largely either behavioral or cognitive, a working knowledge of relevant theories and research findings is also helpful.

While it is not essential for a prospective leader of structured groups actually to have developed the program to be offered, it is desirable that the person have had some experience as either a co-leader or apprentice before becoming the primary leader. Apprenticing or co-facilitating allows the future group leader to obtain "hands on" experience that will enable him/her to develop flexibility and avoid total dependence on the original design. Also, co-leading provides an opportunity to "clinic" group progress and, therefore, become sensitive to the critical points in the group movement. The majority of structured life skills groups are co-facilitated.

#### Life Theme Groups

Contrasting with the life skills groups, which focus on skills necessary for positive interpersonal functioning, are the life theme groups. These groups

are designed to provide individuals with opportunities to examine and grapple systematically with important intrapersonal issues of day-to-day living.

Beginning with the period of adolescence, a substantial increase occurs in the number of times an individual is required to make subjective choices (Gould, 1972). Often, external guidelines for choosing one alternative over another are unclear, and the person must look inward to determine which alternative is most appropriate. In short, the individual becomes his/her own resource for problem-solving, making judgments, and evaluating alternatives.

The choices an individual makes or the way he/she decides to exercise judgment are highly influenced by the extent to which the person has successfully resolved certain key life themes. For example, the degree to which a person has resolved his/her feelings about sexuality, personal values, mortality, and desire for intimacy clearly influence the way he/she will respond to others and to the environment. Most people can recall instances in their own lives or in the lives of others when they have been so preoccupied with a particular issue or theme (mortality, loneliness, etc.) that all else became of little importance. Many people move through life unaware of how they affect other people and/or how their ability to live in the "here and now" has become severely constricted because they have been unable to resolve some critical life theme.

One does not have to search very far to find situations where people have betrayed values central to themselves to escape feelings of loneliness or have chosen to live with surface level relationships because real intimacy or sharing themselves with others was too difficult. Examples abound of how

individuals have redirected their lives to compensate for inadequate resolution of central life issues. Life theme groups provide people with an opportunity to (1) examine their basic beliefs and values, (2) understand their style of relating to themselves, and (3) clarify the reasons why they relate to others in specific ways. The ultimate goal of life theme groups is not simply to examine, understand, or clarify key life themes but to lead toward a resolution of those themes so that individuals can unshackle themselves from the constraints of an unexamined life and redirect themselves in more personally rewarding ways.

Just as the acquisition of many life skills is left to chance factors, so the resolution of important life themes is often left unprovided for in any systematic fashion. The advent of structured life theme groups offers a vehicle for systematic examination, evaluation, and resolution of important values, issues, or needs. Some examples of life theme groups or workshops are Values Clarification, Male/Female Consciousness-Raising, Meaning of Death in Life, Intimacy and Sharing, Loneliness and Self-Betrayal, Creating a Personal Lifestyle, Self-Esteem, and Learning to Love.

Core Elements of Life Theme Groups. Life theme groups share a number of common characteristics. First, each life theme group has a clear purpose that is known to all group members and is the stated reason for the group's existence. Second, life theme groups focus on intrapersonal knowledge as opposed to the acquisition of interpersonal skills. The typical flow of the self-discovery process in a life theme group is exploration, integration, and initiation of the process of resolution. Third, through enabling people to increase their level of self-understanding, life theme groups help them become

flexibly responsive to the needs and values of others rather than rigid or role dependent. Fourth, the group format typically involves (1) a series of structured exercises designed to direct and guide the self-inquiry process, (2) exercises or techniques for integrating and beginning resolution of life issues, (3) opportunity for processing feelings and attitudes uncovered as a result of the group activities, and (4) some guidelines indicating for whom the group is appropriate and whether a screening interview should be conducted. Fifth, life theme groups are value-oriented in that they attempt to assist people to clarify their personal stance with regard to a specific theme or value. Finally, they are time limited. The typical group length varies from one to six sessions, with a corresponding total time investment range of three to fifteen hours. Most life theme groups require a time investment for members of ten to twelve hours. Some life theme groups, however, are designed to be conducted in one day or one evening and, therefore, may last for as few as three hours.

Leader Behaviors and Skills. Even though life theme groups are highly structured, they often possess humanistic or existential foundations. The group leader plays an active, guiding role but is usually less active than the leader of a life skills group. The group leader must clearly explain each exercise, provide a system for processing new information or awareness, and seek to develop mutual trust and cohesiveness. Additionally, much as in life skills groups, the leader of a theme group must (1) keep the group focus on the original goal, (2) have command of a flexible fund of techniques and

activities so that he/she can redirect the style of goal attainment if group conditions so indicate, and (3) be willing to invest as much time and energy in designing and evaluating a particular type of group as in leading the actual group meetings.

Again, as in life skills groups, it is not essential for a prospective leader of structured groups actually to have developed the program to be offered, but it is desirable that the person have had some experience as either a co-leader or apprentice before becoming the primary leader.

Life Transition Groups. Life transition groups are designed to help people understand, evaluate, and accomplish major changes which they feel are necessary or desirable. They attempt to help people move as smoothly and effectively as possible through the unexpected upheavals that occur in life as well as the conscious, willful attempts to undergo change.

People are constantly attempting to redirect or positively influence the course of their lives. One often hears statements like, "He is trying to better himself," "She's trying to be more sensitive," or, "He's trying to adjust to the kids' being gone." Many of the changes or transitions people experience are minor, and can be accomplished without significant stress or fear of unknown consequences. However, when a person comes to the point of being suddenly catapulted into a new life style (death of a life mate, divorce, or other major loss), or purposely seeks to alter an unfulfilling style of existence, he/she faces a very difficult and sometimes overwhelming challenge. Often the individual faces that task alone, unable to find helpful and supportive

signposts. The feelings of apprehension, "second thoughts," and other negatively-tinged emotions that sweep through a person entering a major life transition are magnified by the uncertainty of how to proceed or to comprehend what is happening.

In order to negotiate important life transitions successfully, an individual can profit from the assistance of an external resource system. The system should provide for a chance to reality test, find support for, and become aware of how others deal with change. Adopting and adapting to a new way of life requires a high degree of intrapersonal awareness and a substantial array of interpersonal skills. Moving from a previous way of being to a newer and less familiar style of living is a complex process and demands that an individual possess the skills and self-knowledge to create an appropriate support system for the change. As Morgan (1974) noted, a growing need has surfaced for group contexts designed to accommodate persons going through these kinds of life stages or transitions.

The vast majority of life transition groups focuses on helping people deal with the unexpected. It is dramatic, unanticipated transitions, catalyzed by personal loss, that are most shocking to an individual. Transition groups attempt to provide a mechanism for successfully resolving these important life changes. Among the significant life transitions that many people struggle with are: (1) adjusting to the death of a family member or life mate, (2) making a major career change, (3) learning to cope with an uncorrectable physical injury, (4) leaving the family and entering the adult world, and (5) creating a new way of life following the breakup of a primary relationship.

### Core Elements of Life Transition Groups

The degree of structure employed in life transition groups varies widely, and, therefore, they have fewer core components in common than do life skill and life theme groups. A first major commonality of life transition groups is that they are change oriented and the change goal is identified and openly shared. As noted above, life transition groups offer vehicles for negotiating changes that become necessary because of some psychological or physical loss or result from self-willed alterations in one's life situation. Second, they focus on building future styles of relating based upon a clear understanding of how the past has led to one's present status. Last, life transition groups are time limited. The typical length of a group ranges from four to ten sessions.

### Leader Behaviors and Skills

In life transition groups, the leader is only moderately active and is highly dependent on the healing and nurturing forces present within the group members to help participants effect integration and readjustment. The leader goes beyond the boundaries of traditional group counseling by using structure to augment and catalyze the change process. Thus, the development and facilitation of a life transition group is both an art and a rational process.

Because a life transition group requires that a leader be aware simultaneously of the emotional needs of each member and their progress toward the desired change goal, it is particularly desirable for a prospective leader to first co-facilitate a group. The primary leader has a responsibility to "clinic"

with the co-facilitator (trainee) the progress of the group participants so that the co-facilitator can gain skill in recognizing the critical incidents and points of transitional movement occurring during the life of the group.

### Designing a Structured Group

The next three chapters in this monograph describe existing structured groups designed to help an individual acquire a life skill, examine a life theme, or effectively resolve an important life transition. Each of the programs can be implemented in a wide variety of settings without need for significant revision.

Even though the structured groups to be presented are fairly comprehensive, many people may still desire to create their own type of group. To assist in this process of designing new kinds of structured groups, a series of conceptual and practical guidelines is presented here. For purposes of clarity and ease of application the guidelines have been divided into three areas: (1) pre-group planning, (2) group format consideration, (3) evaluation of outcome. In designing a structured group it is critical to give attention to each of these three areas. The guidelines are key to the effectiveness of a structured group.

#### Pre-Group Planning Variables

The four key conceptual and practical pre-program variables are:

- (1) statement of purpose and focus of the group
- (2) assessment of need for the group in the population being served
- (3) determination of staff and supportive resources
- (4) development of a marketing strategy.

The first step in the organization of a structured group is to articulate as specifically as possible the goal or focus of the group. Once the aim of the group has been clarified, it is necessary to assess the need for that type of group in the agency, institution, or community where it is to be offered. Assessment procedures do not have to be intricate or elaborate, since the purpose is simply to forecast response and identify target groups. Often the need for a particular type of structured group can be determined by (1) intensive interviews with a small number of people, (2) review of the types of problems presented to your agency or prevalent within the community, (3) a brief questionnaire given to a representative sample of the population being served, or (4) research data reported in books and journals on developmental needs of people in the age range you serve.

After identifying the need for the group being developed, the next important task is to match existing resources to the degree of need. Developing, implementing, and revising structured groups requires a significant time commitment. It may be necessary, for example, for staff members to upgrade or embellish their group skills. Staff members also need to learn how to tap the resources of the institution or community since many structured groups may be offered outside of the sponsoring agency and/or may require the use of equipment (video-tape and the like).

The final pre-program planning variable involves establishing a plan for marketing the group to potential consumers. Active marketing aimed at increasing the visibility of the group is important, particularly where the clientele are unfamiliar with the structured developmental group concept. It

must be remembered that structured groups represent attempts to intervene before unmet normal developmental needs deteriorate into deeper psychological troubles. While counselors providing traditional forms of counseling and therapy can rely upon the duress experienced by clients with severe problems to motivate them to seek assistance, leaders of structured groups cannot. A significant portion of the clientele being served by structured groups is not deeply troubled emotionally and thus must be motivated to participate through other means.

### Group Format Considerations

Prior to the actual offering of a structured group several important issues related to group format must be considered. They are:

- (1) elaboration of the goal of the group
- (2) specification of key program elements
- (3) identification of objectives and selection of appropriate exercises and techniques
- (4) Provision of opportunity to reality test
- (5) determination of size, length, and membership.

If the four pre-group planning steps have been effectively carried out, then the groundwork has been laid to determine the actual format of the group.

The first step in developing an appropriate format is to clarify further the goal of the group. The group facilitator must be able to explain in non-technical language to the members the precise goal they will be trying to achieve and how the achievement of the goal can make a difference in their lives. The

participants should understand clearly what will change. For example, will the focus be on eliminating specific counterproductive behaviors? On clarifying life values? On learning how to be appropriately assertive? The facilitator should be able to provide some positive descriptions of the behavior or attitudes of people who have acquired the life skill or resolved the life theme in this particular type of structured group. In addition, it is important that the group facilitator help each member personalize the group goal. For example, it is not enough simply to state that this group will be dealing with a specific goal, such as becoming more assertive. The person must be able to identify how the group can help him or her with his/her specific assertion deficit. Will the individual learn to become less aggressive? Will the group help the person become more goal-directed in asking for what he/she needs? Will the individual learn to defend his/her rights? In other words, what the group can do for each participant personally needs to be spelled out clearly.

The second step in developing a format designed to achieve a stated goal is to specify key program components and indicate how they relate to the overall purpose of the group. For example, in designing an assertion training group, it would be necessary to indicate what the components of assertive behavior are (things such as eye contact, body posture, vocal tone, timing, goal-directedness) and the ways a person could use assertive skills (to defend against verbal attack, to express positive feelings, etc.). In helping a person acquire a life skill, understand a vital theme, or effect a desired transition, it is necessary to identify the discrete steps involved in building cumulatively toward the successful attainment of the goal.

A third necessary step is to select appropriate group exercises or techniques and order them so that the growth or discovery process unfolds sequentially, builds cumulatively on previous learning, maintains motivation through minimizing frustration and maximizing enjoyment, and achieves the goal in the most efficient amount of time.

Fourth, it is critically important that the facilitator provide an opportunity for each participant to test his /her new learning-- a new attitude, skill, or direction in life--in the group. A group setting is an ideal environment for reality testing, seeking support, or trying to approximate a desired behavior. Honest feedback from group members helps the individual to operationalize new learnings and increases the likelihood that these learnings will generalize beyond the group.

After the group facilitator has clearly elaborated the goal, specified the basic elements of the learning process, selected appropriate techniques and exercises, and made provision for reality testing, the next step is to determine the desired size, length, and membership characteristics of the group. Group size will depend upon the amount of individualization the facilitator must provide each member. The more individual attention received for each member of the group, the smaller the group size must be. In general, life skills and life transition groups are limited to twelve or fewer people, while life theme groups often can be expanded to accommodate any number of persons. The number of sessions and duration of each will vary according to the goal and size of the group. Life transition and life skills groups usually meet for several sessions on a weekly basis while some life theme groups meet only once

or twice. Many structured group facilitators report that multiple sessions produce the most satisfactory and lasting results.

An important format consideration is the establishment of criteria for the selection of appropriate group participants. Of course, the global criterion for inclusion is commonality of some specific need (to become assertive, overcome grief, clarify values), and all participants should have some degree of need to achieve the group's stated goal. It is also important that a potential member not be so bogged down with psychological problems that his/her inclusion in the group will detract significantly from the ability of other group members to gain from the group experience. In order to insure that a potential member is appropriately motivated and equipped to profit from the experience, facilitators sometimes prefer to hold a short screening interview with each prospective client. The group facilitator can use this pre-group screening session to explain the nature of the group and to assess the potential member's motivational level. This is particularly true of groups that involve multiple sessions such as life skills groups.

#### Evaluation of Effectiveness

Evaluation of structured groups has some direct parallels with research on other modes of counseling and therapy. The fact that the experience of theory and practice is more advanced than the ability to assess behavior change adequately applies both to psychotherapeutic strategies and outcomes and to structured group methods. The major difference is that because structured groups are fairly recent developments, they have not been the subject of as many research

studies as have other more traditional forms of helping services.

A second parallel with research on group counseling in general is found in the few empirical studies done to date on structured groups. The preponderance of outcome studies has involved a single, usually immediate, subjective self-report assessment completed at the end of the group program or shortly thereafter. This type of study has the dual purpose of providing feedback to the group leader for improvement of further groups and of measuring the participants' view of the group's effectiveness in helping them accomplish their desired goal. The results of the majority of these consumer-based feedback studies indicate that participants feel positive about their accomplishment of the stated goal. Less common, but more desirable methodologically, are those few outcome studies of structured groups that measure "gains" within a single group through some pre- and post-scheme of measurement of change. Finally, although all too infrequent in group studies of any nature, are those research studies that evaluate treatment outcomes by comparison with various types of control groups. This lack of well controlled research is evident also in the evaluation of the effectiveness of one-to-one counseling, for practitioners rarely conduct any systematic empirical assessment of their clients' experience in therapy.

Overall, the current state of evaluation of structured groups can be characterized as sparse and predominantly superficial--which is not surprising, considering its neophyte status. To date, the most thorough research has been undertaken in life skills groups, and most notably in assertive skills training. Even here, however, work on evaluation is as yet only beginning to move

toward being useful and of high quality. Most often, methodological weaknesses characterize the research, particularly with regard to insufficient numbers of subjects studied, inappropriate or totally absent control group comparisons, or inadequate instrumentation. Some studies do employ behavioral outcome measures and appropriate valid and reliable inventories; but these are few in number, of recent origin, and primarily accomplished with college student populations. However, the fact that these studies are beginning to surface can be taken as a sign of the increasing maturity of the structured group movement.

Generally, more sophisticated studies with matched control groups are needed to determine the efficacy of the structured groups, and evaluation needs to be done at greater post-treatment intervals so that designers of similar programs have a scientific basis for relating program elements to outcomes. In this light, it would be helpful if component parts of the various format models were isolated and analyzed, including conceptual variables and their operational measures. Even though few well-controlled research efforts have been generated as yet, the situation can still be viewed as promising. With the advent of these structured developmental groups, the opportunities for researching and validating alternative modes of counseling assistance are plentiful. Also, as they grow in number and expand in scope and method of delivery, there appears to be reasonable cause for optimism over their future, both as effective modes of providing service, and as objects of empirical evaluation. For example, a review of the recent assertion skills training group literature reveals that clear-cut, positive results have been obtained consistently, particularly

Where behavioral measures and controlled studies have been employed.

In addition to empirical measurement of the extent to which group members achieve their desired goals, leaders of structured groups should continue to utilize participants' feedback as a basis for possible revision of the group format. Because goals are clearly identified and learnings build cumulatively from one session to the next, structured groups do have some degree of built-in accountability. For instance, if a group member is having difficulty achieving a goal, it becomes readily apparent to the person, the facilitator, and other group members. An examination of the particular activity being used to meet the stipulated objective is probably in order.

As noted previously, although some controlled research studies have been conducted, the most common form of outcome measure used to date is consumer feedback through interviews or questionnaires. Any attempt to assess the impact of a component of a structured group on an individual should be detailed enough to identify the elements which led to success or the lack of it. Thus, feedback should be solicited from group members with regard to:

- (1) clarity and appropriateness of the goal
- (2) what information contributed to the achievement of the goal
- (3) helpfulness or limitations of the particular exercises used
- (4) the size and length of group
- (5) adequacy of opportunity for reality testing
- (6) extent of generalization to everyday living
- (7) stability of learning, particularly over time.

The group facilitator should also evaluate the effectiveness of the group from the leader's perspective. Did the group reach the desired target audience? Was the need properly estimated for the group in the population being served? Were appropriate members selected for inclusion in the group? Was the goal individualized in such a way that each group member was motivated to learn?

### Summary

In this chapter, the three major conceptual categories of structured groups and their respective core components have been presented. These conceptual benchmarks are also the prototypical model for a structured developmental group of any type. In addition, descriptions of several practical steps useful in designing such a developmental group experience were outlined, and the status and needs for evaluation described. In the next chapter, definitions of specific life skills groups are elaborated, followed in succeeding chapters by similar presentations for life theme groups and life transition groups.

Life skills groups help persons to acquire the interpersonal skills necessary for effective functioning and satisfying living. While these groups may deal with general or very specific kinds of skills, this chapter describes nine programs that are comprehensive in scope, with the idea that they encompass the key elements of more narrowly focused groups. For each program the issue is briefly outlined, an overview is provided, the format is described, and the activities and objectives are given in some detail.

## Chapter III

### Life Skills Groups

Life skills groups have as their common objective the development of life-enhancing skills which enable people to cope successfully with the psychological demands of everyday living. Basically, they try to help people fill in specific developmental gaps that may have occurred during their lifetime, or, ideally, teach appropriate skills contiguous to the origin of demands for them. Specifically, they help individuals acquire the interpersonal skills and abilities that are considered essential to successful negotiation of everyday tasks and interactions.

The goal of a specific type of life skills groups can be quite broad or very narrow. For example, consider the differences in scope of life skills groups designed to help people learn to control and eliminate feelings of anxiety. Some anxiety management groups are designed to relieve a full range of anxiety-based problems, including somatic complaints, social concerns, or general feelings of anxiety; while other anxiety management groups are designed to relieve a single manifestation of anxiety such as public speaking anxiety or test anxiety. Usually, the more comprehensive life skills groups require a larger number of sessions to achieve successfully the stated goal. This chapter focuses mainly on providing descriptions of broad scope life skills programs, since they often encompass the key elements of the more narrowly focused groups.

Regardless of the particular emphasis of the group, the wide variety of structured life skills groups has some common methods, techniques, and procedures that are considered to be essential. The core elements were described more fully in Chapter II. Each one of these elements listed below is usually a key part of any life skills group:

- (1) a clearly identified focus or goal
- (2) development of responsiveness (intentionality)
- (3) use of an education-experiential format (including exercises and techniques)
- (4) criteria for pre-selection of group members
- (5) concern for establishing a positive, cohesive group atmosphere
- (6) a time-limited number of sessions.

#### Focus of Life Skills Groups

The vast majority of life skills programs currently being offered attempt to foster the developmental process in two basic ways. First, many life skills groups advance the development of critical skills which most people acquire only incompletely during their adolescent years. Typical of these incompletely acquired skills are:

- (1) inability to manage the anxiety that accompanies increasing responsibility and independence
- (2) difficulty in negotiating needs and asserting effectively
- (3) lack of interpersonal skills which limit the ability to communicate intimately and clearly

- (4) need to learn to integrate more fully life and work goals.

Second, life skills groups facilitate the growth process by providing a structured experience which allows people to develop specific life-enhancing behaviors and to eliminate self-defeating actions. Examples of the needs addressed by life skills groups in this category are:

- (1) developing effective parenting skills
- (2) reducing excessive weight
- (3) improving sleeping habits
- (4) controlling smoking habits
- (5) developing creative decision-making skills.

#### Descriptions of Life Skills Programs

The remainder of this chapter describes in depth nine life skills groups. These nine structured groups were selected from a much larger number of programs because they represent models which are either comprehensive in scope or have achieved fairly widespread use. For each of the nine groups a capsule description of the developmental issue is presented, a general overview of the specific program illustrated is given, and a detailed description of the activities objectives of each group session is outlined. In addition, we have identified the originator(s) of each model and have presented a session-by-session description of the activities and objectives as it was submitted to us. Therefore, the style of description of each program varies, as well as the degree of detail used to elaborate upon the activities employed. One major variation among the nine structured group models presented relates

to the way the objectives of each session are reported. Some models identify an objective for each group activity within a session. Other structured group approaches utilize several exercises or activities to achieve a specific objective. In situations where there is not a one-to-one correspondence between an activity and specific objective, the overall objectives for each session are listed at the beginning of each session description.

The reader should take into account the fact that each of the programs reported was condensed by the original developer(s) to conform to our format requirements. In some cases leader manuals, workbooks and other materials had to be compacted from over fifty pages to approximately ten pages in length. Readers of this monograph are encouraged to write directly to the individual program developers for more complete information and supportive materials which would be helpful for effective program implementation. A list of these developers will be found at the end of the monograph.

#### Anxiety Management Training Group

The need to monitor, control and eliminate unnecessary, and often crippling, feelings of anxiety is a task that confronts an increasing number of people in our "future shock" pace of living. The inability to manage the physical and psychological feelings of tension and anxiety that are present in daily living can dramatically influence the amount of enjoyment and satisfaction that a person experiences. Indeed, it is striking to note the degree to which people restrict their life styles and adopt many self-defeating behaviors to avoid having to cope with feelings of anxiety.

Structured groups designed to help people monitor and control feelings

of anxiety are attempts to supply people with adaptive coping skills so that they will not have to rely on more maladaptive coping styles. A wide variety of anxiety management groups has been devised over the past few years. As noted before, some group models focus on the treatment of a particular type of anxiety, while other models are more comprehensive in scope. The model illustrated in detail in this chapter is a comprehensive model designed to deal with feelings of generalized anxiety, somatic complaints, speech and test taking anxiety, free-floating anxiety, and many other manifestations of underlying tension. //

The Anxiety Management Training Model was developed by Barry McCarthy in the Counseling Center at The American University and meets for one and one-half hours weekly for four weeks. The purpose of the group is to help people develop the skills to monitor and control non-productive feelings of anxiety. The group relies largely upon behavioral concepts and is designed for a group of from eight to twelve participants. Since the group model utilizes progressive relaxation techniques, the leader must arrange for a comfortable room in which participants can recline on a soft surface (pillows or carpeting), noise level can be controlled, and lighting can be dimmed at appropriate times.

The group participants can differ with regard to the type of anxiety based problem they are experiencing. However, people who have developed several anxiety or phobic problems are considered inappropriate for inclusion. Because the group meets for one and one-half hours for four consecutive weeks, prior to the group each participant should agree to attend each session and do

the homework assignments.

### Group Format

The Anxiety Management Training model developed by McCarthy is a sequential skill building approach. The concepts, exercises, time limits, and objectives are presented below.

### SESSION I

<u>ACTIVITY</u>	<u>OBJECTIVES</u>
1. Introduction and background (30 to 45 minutes).  a. Each person introduces self and states purpose for being in group.  b. Leader gets verbal commitment from each person to do homework; describes group format (including confidentiality); sets up buddy system; explains theory and technique of relaxation; stresses the goal of monitoring and controlling anxiety (importance of self control); explains the difference between anxiety management training and hypnosis, meditation, yoga, etc.; and gives clinical and personal examples of when it can be used.	(1) To begin to establish group cohesiveness.  (2) To obtain commitment to all four sessions.  (3) To clarify how to learn to control and monitor anxiety.  (4) Through buddy system to have contact with person outside group who monitors and reinforces the person for practicing skill.  (5) To begin to develop skills in relaxation, and to increase participants' feelings that they can learn to manage and eliminate non-productive tension.
2. Practice of relaxation exercises (30 to 45 minutes).	
3. Discussion of exercises and homework (15 minutes). Leader re-emphasizes that relaxation is a skill which must be practiced to be	

## ACTIVITY

## OBJECTIVES

learned, and that one must learn to discriminate between tension and various degrees of relaxation.

4. Homework assignment.
  - (a) Practice exercises a minimum of once a day for ten minutes each. Practice tensing muscles first, eyes closed, comfortable position.
  - (b) Keep list of what makes you anxious during week. Try to discriminate where anxiety is felt.
  - (c) Check with buddy at least once during week to monitor progress.

## SESSION II

1. Check on homework (10 to 15 minutes). Important to be sure that buddy system is positively reinforcing and that person is ready to make maximal use of relaxation exercises this session.
  - (1) To insure that group members are completing homework assignments and acquiring relaxation skills.
  - (2) To begin to develop the capacity to utilize imagery as a way of controlling anxiety.
  - (3) To further refine the skill of relaxation and use it to monitor and control feelings of tension.
2. Discuss use of imagery and development of relaxation and competency scenes (30 minutes). Provide the following guidelines:
  - a. Since anxiety is an internally-cued response, it can be elicited and controlled and the procedure learned and practiced via use of imagery.
  - b. It is important to use all senses-- touch, sight, hearing, movement, smell, etc. while imagining scenes.

## ACTIVITY

## OBJECTIVES

- c. See self directly in scene, not a picture.
  - d. Each participant is to construct a relaxation scene. Examples: lying on beach, having back rubbed, skiing, etc.
  - e. Each participant is to construct a competency (mastery) scene-- Examples: boss saying "Good job," cooking gourmet meal, getting an "A," etc.
3. Practice relaxation exercises (30 minutes).
  4. While still relaxed, each member turns on relaxation and competency scenes, each scene twice for one minute each.
  5. Discuss relaxation and imagery experience and ways to make them more real and vivid.
  6. Homework:
    - a. Practice relaxation for same time periods, but by end of week fade out technique of tensing before relaxing.
    - b. While relaxed, use relaxation and competency scenes to enhance the vividness and comfort.
    - c. Begin thinking of two anxiety-provoking scenes. Scene should be focused where individual is feeling anxiety, so that it is out of control.

## ACTIVITY

## OBJECTIVES

- d. Meet with buddy at least once to reinforce practice and monitor progress.
7. End session by taking 5 minutes to relax group (without first tensing) and then imagine relaxation and competency scenes. Participants must practice and refine this during week.

### SESSION III

|--|--|

## ACTIVITY

## OBJECTIVES

and present it for a shorter time. Hopefully, both anxiety scenes will be finished during session.

- a. First three scene presentations. Participants are to feel the anxiety, become aware of physical and psychological manifestations of anxiety (20 second presentation).
  - b. Each anxiety scene followed by 45 seconds of relaxation with either relaxation or competency scene. Members learn to replace anxiety with relaxation. Be sure participants are relaxed before presenting anxiety scene again.
  - c. On the rest of the presentations, goal is for participants to be relaxed during anxiety scene-- to be able to imagine anxiety scene for 45 seconds with no anxiety. Present at 20 seconds, 25 seconds, 30 seconds, and finally 45 seconds. Goal achieved when no one in group signals feeling of anxiety with two 45-second presentations.
5. Discuss procedure and homework (10 to 20 minutes).
  6. Homework:
    - a. Practice scenes at least twice at home, in relaxed comfortable position, eyes closed. Then practice anxiety inducing scene twice in real-life situation.
    - b. Practice relaxing with eyes open; and then in regular, non-comfortable position. Eventual

## ACTIVITY

## OBJECTIVES

goal is to be able to relax  
in real world situation.

- c. Be aware of other anxiety-provoking situations in which anxiety management can be used.
- d. Check with buddy at least once during week.

### SESSION IV

1. Discuss homework (10 to 15 minutes).

Start with success experiences and then move to problem situations. In generalizing to real-life situations, leader should emphasize taking small steps; if anxious, moving back a step or two until relaxed; and not letting anxiety snowball but finding that it can be monitored and controlled.

2. Participants practice anxiety management technique, develop two new scenes (15 50 20 minutes).

- a. One scene should be a troublesome situation, but higher in anxiety evocation.
- b. The second scene should be another problem area where the client would like to feel more relaxed and competent.

3. Use of the Anxiety Management Training Technique (30 to 40 minutes).

Same procedures as third session.

- (1) To troubleshoot any homework problems.
- (2) To work toward further generalization of anxiety management skills.
- (3) To make sure each member has the ability to relax quickly and naturally.
- (4) To provide more training and reinforcement in anxiety management techniques.
- (5) To encourage and support continued practices of skill.

## ACTIVITY

## OBJECTIVES

4. General discussion of continued use of anxiety management techniques and continued use of self-control procedures to monitor and control anxiety.
  - a. Continued practice of anxiety management at home both in imagery and real life situation.
  - b. Continued practice of relaxation in real-life situation, dropping out relaxation "props."
  - c. In new anxiety situations, using imagery and anxiety management techniques.
  - d. Meeting with buddy in two weeks to discuss continued use of program.

### Assertion Training Group

One of the most universally recognized and desired needs of people is to be effectively assertive. In one respect our culture requires us to give feedback, receive feedback, and initiate interaction with others, and demands the ability to be assertive. However, in another respect our cultural patterns prescribe certain behaviors or ways of relating to others which conflict with the development of assertive skills. Since the need for a person to be able to assert is high and the chances for acquisition of the skill are rather low, the overwhelming consumer response to participation in assertion training programs is not surprising.

Structured groups designed to enable people to develop effective assertive

behavior range in length from short one-session models to those that spread training over six or more consecutive weeks. The longer training models have produced the most lasting client benefits. This is not to say, however, that the one- and two-session models are without value. These shorter models seem to be very effective in raising individuals' awareness of their assertive skill needs, as well as providing a forum for resolution of some of those needs. In addition, they often help a person learn to identify the common mistakes made by many non-assertive and aggressively assertive people.

The structured group program selected for inclusion in this monograph is entitled "Assertion Training" and was developed by Dolph Printz in the Counseling Center at the University of Rhode Island. The model is an intensive assertive training experience designed for a relatively small number of participants. The ideal number of group participants should not exceed six (plus two trainers) and should consist of both sexes. The purpose of limiting the number of group participants to six is to insure adequate time for role-playing and behavioral rehearsal. The co-trainers must be assertive individuals in their own right and preferably be a male and female. The program includes six weekly sessions besides pre-screening interviews and a follow-up session one month after the end of the sixth session. Each session lasts two hours, and all sessions are scheduled consecutively. Videotape equipment may be used during the second, third, fourth, and fifth sessions. Although there are some highly desirable advantages to using videotape, it is not mandatory.

Prior to the beginning of the first session each participant will have had a short pre-screening interview by one of the group leaders. The goals of the pre-screening interview are: (1) to validate the fact that the prospective participant lacks assertive skills; (2) to explain the group format, goals, and meeting schedule; (3) to obtain the client's commitment to attend all sessions and complete homework assignments; and (4) to screen out clients for whom the group may be inappropriate. Once six appropriate participants have been selected, Printz outlines the following sequence of activities and objectives for his assertion training model.

## SESSION I

### ACTIVITY

1. Trainees and group members introduce themselves.
2. Trainers hand out outline of principles and activities for first session. (This is done for all sessions.)
3. Trainers explain rationale for behavioral therapy in general, and assertive training in particular.
4. Trainers explain that the skill of assertive behavior can be broken down into manageable behavioral components.
  - a. Eye contact and appropriate facial expression.
  - b. Body posture and appropriate hand movements.
  - c. Vocal tone, volume, and quality.
  - d. Goal directedness.

### OBJECTIVES

1. Begin to establish a sense of group cohesiveness.
2. Clients then have a guideline for the session that reduces some of the anticipating anxiety and becomes a reference sheet for later review.
4. This introduces the "components" section which operationalizes the skills acquisition.

## ACTIVITY

5. After each presentation of a behavioral component, the trainers model the contrast between ineffective and effective use of that component. Group members then pair up and alternately perform a related exercise. For example, the exercise to follow the eye contact component has one person beginning a conversation (content irrelevant) with his partner while looking at the floor; gradually he makes full eye contact and continues speaking.
6. Trainers present Assertive Guideline: "State the feeling that needs to be expressed as clearly as possible, and state what you need from the other person. If appropriate, ask for respect from the other person for your feelings."
7. Trainers present Reasons for Assertion:
  - a. Objective Approach Assertion is assertive behavior utilized in the pursuit of or movement toward an objective goal (e.g., asking for a pay raise, asking to borrow an object from a friend, getting past rude secretaries or clerks to settle a matter, etc.).
  - b. Subjective Approach Assertion is assertive behavior utilized to approach another person for reasons of interpersonal attraction or any subjective communication

## OBJECTIVES

5. Essentially, this and the following exercises are interpersonal warm-ups but they also allow the individuals to exercise the behavioral contrast in themselves and others. These should be enjoyable above all.
6. This statement is intended only to be a clear statement of the general interpersonal mechanics of assertion. The last sentence reflects that the asserter does not always get the goal he/she wants, but always has the human right to express his/her feeling or opinion.
7. This breakdown of assertion allows for a clearer conceptualization of assertive motives and provides group members with a cognitive model for their assertion skills.
  - b. This type of assertive behavior is often neglected and many programs focus on defensive assertions (see next page); it is important to include assertion that is directly life-enhancing.

## ACTIVITY

to another person (e.g., getting beyond superficial acquaintances to actual friendships, communicating interpersonal feelings, etc.).

- c. Defensive Assertion is assertive behavior utilized to maintain one's individual rights and personal dignity; in essence, one is "defending" one's life-space.

8. Trainers call for questions and clarify any issues that require it.

9. Trainer-modeled role-plays.

Trainers role-play three pairs of scenes--one pair for each of the three types of assertion: objective approach, subjective approach, and defensive approach.

Format for trainer-modeled role-plays:

- a. Trainers utilize three pre-selected situations to correspond with the three types of assertion.
- b. They first assign behavior component discrimination roles to each of the group members; these people then critique the role-plays after the first scene of a pair. The discrimination roles are for observation of eye contact, facial expression, body posture, hand movements, vocal tone and quality and content (goal directedness). These roles should be rotated at the end of each pair of scenes.

## OBJECTIVES

9. This procedure models the basic role-play procedure which will be used with the group members. Essentially, group members see the process of behavioral shaping toward effective assertive behavior.

- b. This procedure allows for active group member practice in discrimination of behavioral components and for consolidation of modeled behavior.

## ACTIVITY

## OBJECTIVES

- c. Trainers first play a scene with the "asserter" being unassertive by leaving out some components (one minute).
- d. Group members critique presence or absence of components.
- e. Trainers replay same scene with effective assertive behaviors (one minute).

- e. Trainers are here modeling responses to group feedback.

### 10. Homework assignments:

- a. Observe a good assertive role and study his/her behavioral components.
- b. In interactions with others, be aware of your own behavioral components and actively bring them into play in order to make better contact.
- c. Describe two situations in your own life in which you have been unable to be assertive and would like to be. Bring these written scenes to the next session.
- d. Read selected articles or book chapters on the "rights to be assertive."

- a. This observation allows for further modeling effect.
- b. This assignment maintains clients' awareness of these components during the week and encourages them to flex their "body language" muscles.
- c. These are the two basic scripts for individuals' role-plays in the group. By using their own real-life situations, the group members are better able to generalize the group-learned skills to their lives.

### SESSION II

1. Discussion of homework and sharing of past week's experiences.

1. Trainers can respond to group members' assertion-related experiences and positively reinforce any progress made. Also, individuals

## ACTIVITY

2. Trainers hand out session outline.
3. Trainers explain some further behavioral guidelines for assertion:

- a. Relax as fully as possible before entering a difficult assertion situation. Group members can either be taught a quick relaxation technique in the group (such as Fensterheim's method) or be offered relaxation training at another time.

- b. Try to engage the other person from the beginning of an encounter with non-verbal behavioral components.

- c. Keep the goal of the interaction in mind and actively return to it when necessary.

- d. Focus on getting your own feelings across in a direct, straightforward manner.

4. Trainer-client role-plays

Half the group role-plays the less difficult of their two written scenes with one of the trainers as the "assertee."

## OBJECTIVES

usually raise questions and issues that need to be dealt with.

- a. It is clear that reducing one's anxiety before a difficult encounter is beneficial, and a relaxation technique is a valuable tool to possess.

- b. Focusing on the very beginning of an assertive encounter is very important; initial contact is essential.

- c. Persistence counts for a lot in assertion, and it may be necessary to "recycle" back to the goal.

- d. Since unassertive people worry excessively about the other person's feelings, it is reasonable at this point to encourage group members to devote more energy to their own feelings.

4. Starting with the less difficult allows for higher probability of initial success. Trainers should role-play a character difficult enough to make the person work at the assertion,

## ACTIVITY

## OBJECTIVES

but not so much that the member is discouraged.

Format for trainer-client role-plays:

- a. After group member describes his situation in enough detail to allow realistic role-playing, he/she and one of the trainers play it (about 1 to 2 minutes).
  - b. Immediately after the scene, the "asserter" views the videotape playback and critiques the behavioral components. If videotape is not available, then the group members can critique the "asserter's" use of behavioral components.
  - c. One of the trainers initiates other group feedback and positive reinforcement. Suggestions are offered.
  - d. The scene is played again as before with videotape and group feedback. If necessary, the process can be repeated a third time until the individual is comfortable with his/her performance and the group (and trainers) feels that progress has been made.
5. Homework assignments:
- a. Practice the quick relaxation technique when feeling anxious (or acquire other relaxation skills if desired).
- a. At this point, it is best to have a trainer in the "assertee" role (until perhaps the 4th session); the trainer can better modulate the degree of resistance and general difficulty of the scene.
  - b. Group member actively observes and critiques his/her own behavior; the person "owns" his/her behavior.
  - c. Trainers are here modeling a constructive reinforcement process.
  - d. This is basically a behavior-shaping procedure with a plentiful amount of appropriate reinforcement. The trainers should be vigilant that group feedback is constructive and not hostile.

## ACTIVITY

- b. Group members now make a behavioral contract with the group to be accomplished during the week: to express their feelings in a specific non-threatening situation.

## SESSION III

1. Discussion and sharing of experiences and contracts.

- a. Trainers (and group) actively and positively reinforce gains made.

- b. Broken contracts should be explored and suggestions made (non-punitively).

2. Trainers hand out session outline.

3. Trainers present three additional behavioral guidelines:

- a. Good assertion is not aggression; assertion should respect both the rights of the asserter and assertee. Aggressive behavior clearly closes off communication of any really productive sort.

- b. Timing of an assertive response is critical in two respects:

## OBJECTIVES

- b. This assignment begins a series of between-session contracts to motivate group members to change their behavior outside the group. These are "gentleman's agreements," but the demand characteristics of the group are a powerful motivating force.

1. Hopefully, group members have garnered their own positive reinforcement in vivo, but the group reinforcement is also beneficial.

- a. This distinction is best made within role-play feedback, but a formal conceptual statement is helpful.

## ACTIVITY

(1) When an individual does not assert in a given situation over time, he/she builds up anger and resentment which sometimes is then "dropped" much later on the other person; this delayed response is generally distorted and definitely non-productive.

(2) Within an assertive encounter, the most effective response is an immediate response and the person should state his/her feeling before being side-tracked.

c. Before asserting, it is important that the individual internally reflect on the specific goal. The assertive response should begin with a personal feeling, very often initiating the interaction with "I..." By starting each assertive statement with the word "I," the trainer is encouraging the individual to internally reflect on his/her purpose for asserting; that is, what really is the goal?

4. Role-plays with the second half of the group as described in Session II.

5. Homework assignments:

a. Group members contract to act on a specific, real-life objective approach assertion (use same procedure as indicated in Session II).

## OBJECTIVES

(1) Since many non-assertive people sometimes "explode" after a long period of silence, this concept allows them to see the connection between continued non-assertion and consequent eruptive aggression.

(2) This concept is mostly elaborated in the role-plays and emphasizes the first few moments of making contact with the other person.

c. This is emphasized to facilitate straightforward communication but also to prevent accusations of the other person which only serve to put others on the defensive.

a. This second contract is more difficult than the previous one, and the later two contracts complete the hierarchy of increasing behavioral challenge.

## ACTIVITY

## OBJECTIVES

### SESSION IV

- |   |  |
|---|--|
| <ol style="list-style-type: none"><li>1. Discussion and sharing of contracts (procedure indicated in Session III).</li><li>2. Trainers hand out session outline.</li><li>3. Trainers review principles covered in past sessions (briefly) and respond to issues raised.</li><li>4. Role-playing with group members, second scene (half the group).</li><li>5. Homework assignment:<ol style="list-style-type: none"><li>a. Group members contract to act on a specific real-life defensive assertion (same procedure as indicated in Session II).</li></ol></li></ol> | <ol style="list-style-type: none"><li>1. The general objectives of the fourth and fifth sessions are identical to those reported in the second and third sessions.</li><br/><li>3. This is intended as a conceptual refresher prior to the second go-around of role-playing.</li></ol> |
|---|--|

### SESSION V

1. Discussion and sharing of contracts (as before).
2. Trainers hand out session outline.
3. Role-playing with second half of group.
4. Homework assignment:
  - a. Group members contract for a specific real-life subjective approach assertion (as before).

## ACTIVITY

## OBJECTIVES

### SESSION VI

1. Discussion and sharing of contracts (as before).
2. Group improvisational role-plays:
  - a. Trainers and group members pick random assertive situations to role-play; these should be situations which occur suddenly and for which an asserter must respond without prior rehearsal or planning (e.g., someone steps in front of you in line, someone takes your seat, people talk loudly at movies, etc.).
  - a. These role-plays are intended as additional behavioral practice and as enjoyment. These sudden situations are frequent in life and require more spontaneous assertive responses.
  - b. As much of the group can get involved as possible so that the situation is realistic; one person is targeted as the "asserter."
  - c. Videotape is not used for these role-plays, and feedback and reinforcement are chiefly in the hands of the group.
  - d. The scene may be replayed as necessary.
3. Trouble-shooting and wrap-up.
4. Announcement of time and date of Session VII (approximately one month later).
4. The purpose of the follow-up session is to allow the clients "time in the field"; the delayed final session can address problems which have been encountered and utilize additional specialized role-plays.

## ACTIVITY

5. Homework assignments:
  - a. Keep an ongoing assertive diary for the coming month with entries for as many situations as can be charted; emphasis can be on both the positive occurrences and the problematic skill areas.
  - b. Immediately prior to Session VII, review the diary and summarize the successful and problematic areas.

## OBJECTIVES

- a. The diary allows the client to self-document his/her own success areas and also to delineate the situations or skills which need further work.
- b. This review provides the basis for the trouble-shooting work in the follow-up session.

## SESSION VII

1. Trainers facilitate free-flowing discussion concerning clients' successes and problems with assertion.
    - a. Role-playing can be utilized to concretize the discussion.
    - b. The issue of choice in assertion can be introduced by the trainers if not raised by the group.
  2. Trainers elicit feedback on their personal and program performance.
  3. Good-bye.
1. Since this session is essentially a "booster" session with emphasis on trouble-shooting, there is no firm agenda.
  - b. Although the behavioral technology of assertion has been acquired, an individual has the right to choose whether or not he/she uses it in certain situations.
  2. The goal of soliciting feedback is to learn what leader behavior exercises and/or activities group members felt were helpful or not helpful.

## Communication Skills Groups

The ability to communicate clearly, openly, and with a feeling of naturalness is an attribute highly desired by many people. Unfortunately, people often concentrate more on the inadequacies in their communication of thoughts and feelings to others than they do on ways they can change their behavior to improve their ability to relate. A person with a deficit in interpersonal communications skills is usually painfully aware of the negative feelings such as alienation, isolation, and social discomfort which often accompany this lack of skill.

Communication skills groups provide a series of structured activities that enable people to develop effective interpersonal skills and rewarding styles of relating, as well as to overcome specific personal barriers to effective communication. The actual content of communication skills groups varies widely, from those that emphasize listening and responding skills to those that focus on reducing social anxiety and improving interpersonal transaction abilities.

Although communication skills groups vary considerably, they can be roughly categorized into two types. The first type is designed for the individual who has minimal, if any, relationships with others. He/she can be characterized as a person who has trouble initiating relationships with others, cannot sustain relationships, is inhibited in heterosexual relationships, and experiences general feelings of social anxiety. The second form of communication skills group is for people who have formed a relationship with another person and want to enhance the quality of that relationship. The following pages highlight an exemplary program in each category.

## Communication Skills Workshop

The Communication Skills Workshop developed by the staff of the Counseling Center at Colorado State University is an example of the first type of program -- that is, one designed to assist individuals to develop effective interpersonal relationships. It helps individuals who have difficulty initiating and sustaining relationships with other people. Despite its focus on the person whose interpersonal skills are inadequate, however, it can benefit a wide range of people. As indicated in the Communication Skills Workshop Manual, the purpose of this group is "to provide an atmosphere in which members will learn and practice a model of good communication by increasing their ability to:

1. be more honest and open about themselves (self-disclosure)
2. experience caring and being cared for (intimacy)
3. express their observations and reactions to other people (giving feedback)
4. hear and accept others' reactions to them (receiving feedback)
5. identify and work toward new behavior (behavior change)" (1972, p.1).

The general structure for the workshop is outlined on pages 1 and 2 of the leader's manual and is presented below:

"The Communication Skills Workshop is a 6-week session structured workshop with groups meeting once a week for 2 hours as well as one 7-hour session... Members also attend 4 weekly meetings with a smaller group between regular group sessions.

### A. The Total Group

#### 1. Composition

- a. A CSW group should include 7-10 members, composed equally of men and women if possible.
- b. The authors found that combining participants with a variety of social skill levels into one group seemed to facilitate interaction and change.

- c. It is recommended that there be one male and one female facilitator although use of a single facilitator would probably be successful.

## 2. Sessions

- a. The group will meet for seven sessions over the course of six weeks. With the exception of the second session, meetings are weekly and last two hours.
- b. The second session takes place during the week between the first and third sessions, and lasts seven hours. Session #2 takes place on any available full day, such as a Saturday, from 9:00 A.M. to 4:00 P.M.

## B. The Mini-Group

### 1. Composition

- a. The mini-group is composed of 3-4 CSW participants, maintaining as equal a ratio of men to women as possible. At least one member of both sexes should be in each mini-group.
- b. At least one member who has been determined by the facilitator to be potentially helpful, caring, or facilitative, and who is somewhat strong relative to the rest of the group should be in each mini-group.
- c. The mini-group should be composed of participants whom the facilitators predict may be helpful to each other.
- d. There is no facilitator present at mini-group meetings.

### 2. Sessions

- a. Mini-groups meet during the week between sessions of the total group.
- b. There are four mini-group meetings, beginning after Session #3, taking place weekly at a time convenient to the members of each individual mini-group.
- c. There is no designated time limit for mini-group meetings.

By providing opportunities for large group interactions with the facilitator(s) present, small group interactions without a facilitator, and specific help with goal setting, the aim is to maximize the likelihood of positive change in interpersonal behavior.

### Group Format

The Communication Skills Workshop model (CSW) utilizes a sequential skill building approach within a clearly articulated and specified format. A condensed version of the activities and objectives in the Communication Skills Workshop Manual is presented below. The effective implementation of this program will be greatly enhanced by direct use of the leader's manual which can be obtained from the Counseling Center at Colorado State University.

### SESSION I

<u>ACTIVITY</u>	<u>OBJECTIVE</u>
1. Introduction and Expectation Setting. a. Facilitator describes the general structure of the group, mentioning the weekly sessions, the all-day meeting, and the mini-group meetings. b. Facilitator stresses importance of a commitment to attend all sessions. Contracts are signed.	1. To provide participants with a general overview of the workshop structure, clearly establish the facilitators as authority figures (i.e., knowledgeable about process).
2. Warm-up Exercise. Name Chant. The group repeats each member's name in two different ways, e.g., with joy, anger, sadness, loneliness, humor.	2. To maximize the likelihood of remembering one another's name.
3. Non-Verbal -- Creative Objects. Group members pass around three or four objects for which each participant creates a different use while	3. To free people of self-consciousness from being in a strange setting by providing a fun activity and to give

## ACTIVITY

the group guesses what it is, i. e., ruler, ball, pie tin, handkerchief.

4. Verbal Communication -- Who Am I? and individual introductions. Participants write five key dimensions about themselves which are then pinned to the front of each participant. Participants circulate, read one another's papers while remaining silent. After the non-verbal phase the participants return to 2 or 3 different people they thought interesting and ask questions which they ordinarily would not ask. The participants then choose one member of the group whom they introduce to the group by telling something about the individual not previously revealed.
5. Trust Exercise -- Trust Fall. Participants form a small circle in which one member stands in the center. The person in the center, body rigid, arms at side, falls toward the circle. The members of the group catch and pass the center person around the circle. This entails passing the person across the diameter of the circle as well as around the circle.
6. Distribution of Session I handout entitled, "Memo for Communication Skills Workshop," and end of first session.

## OBJECTIVE

participants the chance to watch how people act non-verbally.

4. To allow participants to become acquainted quickly in a relatively non-threatening way; to look at and share with others who we are, what roles we have, and our own uniqueness.
5. To introduce the basic concept of trust.
6. The first session is intended to provide an opportunity for group participants to begin to feel comfortable with each other, and to reduce the anxiety usually shared at the beginning of groups. Group members experience having fun together, they begin the process of self-disclosure in a gradual and controlled manner, and they are introduced to non-verbal exercises.

SESSION II (ALL-DAY INTENSIVE SESSION)

ACTIVITY

OBJECTIVE

1. Behavior Description. Triads are formed and participants are given specific instructions for describing certain behaviors (15 min.) and processing reactions.
  2. Sharing Important Objects. Each member has been told to bring something to the group that is important and would help the group get to know him/her better. Participants show the group what they have brought and explain why it is important to them. The group asks any questions they wish of each member. The group share spontaneously, rather than going around the circle. Discussion follows. (30 min.)
  3. First Impressions. One group member tells what part of nature he/she sees himself/herself as. This may be a flower, tree, animal, element, etc. The person tells why he/she sees himself/herself this way. Then he/she chooses another group member and tells what part of nature he/she sees that person as. The receiver of feedback tells why he/she thinks the description was chosen, and how he/she feels about it. The giver of feedback then tells why he/she chose what he/she said. In this way, the feedback process of message-feeling-clarification is modeled. The process is repeated for each member of the group. Discussion follows. (1 hour)
1. To practice describing non-verbal behavior objectively without interpretation; to study the body language messages that accompany verbalization; to alert group members to the array of signals which they emit when they are attempting to communicate.
  2. To have each group member share an important part of self with the group; to generate data about each member with respect to how much he/she shares and how he/she reacts with others.
  3. To focus on the processes of self-disclosure and feedback; to provide a rather non-threatening, playful context in which individuals can give their honest impressions of each other.

## ACTIVITY

4. Feedback Model and Johari Window. The leader passes out the handouts on feedback and the Johari Window, explains their connection, and answers any questions from the group.
5. Group interaction (using same format of Behavior Description exercise used previously). Group breaks into triads. Person A talks about why he/she came to the group, what things he/she wanted help with, how he/she feels about self. Person B tells A what he/she heard A saying. Person C serves as observer of interaction between A and B. Introductions are made of each person by other two members of his/her triad. The focus is on feelings. (45 min.)
6. Lunch. Participants first pair up with new partners, and then leaders introduce exercise to group members. During lunch, group members feed each other. Pairing up, each one feeds the other after obtaining food for the other. After lunch, some quiet time is allowed for each person to think about what he/she has been experiencing, how he/she feels, what he/she has learned about self. (1 hour, 30 min.)
7. Unstructured Group Discussion. Designed to keep the focus on here and now, and relationships and feelings between group members. Video tape is used to record discussion for playback in third session. (1 hour)

## OBJECTIVE

4. To concretize in a coherent theoretical way the concepts acted out in first impressions; to teach the feedback model so that it can be used as a basis for the future interaction in the group.
5. To encourage self-disclosing behavior; to focus on feelings and emotions; to model support and understanding; to foster a supportive climate in the group.
7. To allow time for free exchange, develop group cohesion, model and use good feedback process.

## ACTIVITY

8. Cradling. One group member lies down on the floor, others reach under and lift the person up, rock her/him gently, lift to a position over their heads, and lower her/him gently. Each group member takes turn. (30 min.)
9. Group Fantasy. The group members lie on the floor, on their backs, with their heads together like spokes on a wheel. They are told they are about to embark on an expedition together. -- everything is ready and they are set to go. Then any group member can set the scene or describe what he/she sees in his/her fantasy. (15 min.)
10. A short explanation of handouts is presented which highlights the process of behavior-change goal settings. (15 min.)
11. Relaxation using Jacobsen's Relaxation technique. (30 min.)

## OBJECTIVE

8. To build group closeness, to continue the feeling of group support, to encourage non-verbal caring.
9. To get an indication of the stage of group life; to provide a fantasy means of learning about relationships within the group.

## SESSION III

1. Video Tape Exercise. Selected portions of video taped interaction are played back and group members watch. They are asked to evaluate their behavior in terms of how satisfied they are with it and, more importantly, in what ways they would like to be behaving that are different from what they are observing.
  2. Specific behavioral goals are developed within the workshop setting by answering questions on Behavioral Change Goal-Setting Worksheet and role playing goal-
1. To provide each member with useful feedback in regard to how the person currently relates in the group.
  2. To assist group participants in clarifying and setting specific behavioral goals.

## ACTIVITY

## OBJECTIVE

setting. Focus is on individual goal setting utilizing the following process: members form into two groups and complete Item No. 5 of the worksheet together. A group leader is present in each of these groups and aids in refining goals. On a separate sheet of paper, each member then writes out one selected target behavior and agrees to work on it in the following workshop sessions. Discussion should center around behavioral change goal inside the group. Focus in last sessions is on behavioral change goal outside the group, using the feedback model for their perception of an appropriate behavioral change goal.

3. Explanation of the Mini-Group Concept. The emphasis in the Mini-Group is on expanding the opportunity to practice good communications outside the formal group meetings and to experience a deepening relationship with selected others through the use of self-disclosure and good feedback. The need to bridge the gap between what takes place within the formal workshop setting and the real world should also be dealt with in relation to the mini-group experience. Confidentiality of mini-group interaction as separated from the large group is stressed.
4. Forming Mini-Groups.
  - a. Assigning members
  - b. Getting acquainted
  - c. Establishing a meeting time (exchange of name and phone numbers)
  - d. Distribution of exercise No. 1 (not to be opened until group
3. To introduce and define the purpose and activities involved in the mini-groups.

## ACTIVITY

meets) (To help insure the trust level in the mini-group, the use of all mood altering agents should be avoided.)

5. Material needed:
  1. Mini-group encounter booklets.
  2. Video tape deck, tape and monitor.
  3. Pencils and paper.

## SESSION IV

- |  |   |
|--|---|
| <ol style="list-style-type: none"><li>1. Behavioral Change Goal Sharing. After receiving behavioral change goal worksheets, group members share their behavioral change goals with the other members of the group. Feedback is given with respect to the goal, and leaders explain that there will be peer ratings of progress toward goals.</li><li>2. Mini-Group Sharing. This is a topic-focused discussion about the value of the mini-group experience in terms of behavior change goal setting, feedback, and other issues. Use of fishbowl technique may be helpful here.</li><li>3. Positive Feedback Practice. Each member asks the group for positive feedback, or "listen checks" can be used if desired. The group members giving the feedback call upon the others.</li></ol> | <ol style="list-style-type: none"><li>1. To provide incentive for establishing constructive goals, an opportunity for feedback, and assessment of goals, and modeling for others in the group as each group member shares his/her behavioral change goal with the group. Feedback can be given with respect to the goal. Leaders explain that there will be peer ratings of progress toward goals.</li><li>2. To encourage mini-group activity; to provide an opportunity for group members to exchange information which might help all groups function more effectively.</li><li>3. To aid group members in practicing the feedback model and to enable them to feel more relaxed in positive feedback.</li></ol> |
|--|---|

## ACTIVITY

4. Negative Feedback Exercise.
  - a. Members sit in circle with the person receiving feedback sitting in center or in opening of semi-circle.
  - b. Open feedback -- people who wish to give negative feedback tell person in center what they wish to say (use Good Feedback Model).
  - c. Processing -- after all persons in group have received negative feedback, everyone discusses how it felt to receive such information. Stress is placed on the utilization of this input in their growth pattern.
  
5. Personal Progress Form. Using participants' worksheets to identify other participants' behavior change goals, each participant writes other participants' names on the outside of the blank slips of paper, his/her own rating of the other participants using 1-5 scale, and also his/her own name on the inside of each slip of paper and place these slips in piles in the middle of the floor. Each participant will pick up his/her own slips, tally and average the scores and plot the number score on the graph located on the progress sheet. This will be done at the end of all remaining sessions, except the last session. The Behavior Change Goal-Personal Progress Form is used here.

## OBJECTIVE

4. To provide members with the experience of giving and receiving information about behavior that is negatively perceived. Individuals are encouraged to tune in to this and deal with it in a constructive manner in an attempt to show that interpersonal anxiety-producing situations can be dealt with in non-defensive and personally rewarding ways. Using the Good Feedback Model enhances the digestibility of the feedback and creates an atmosphere which is more likely to result in its utilization.
  
5. To provide each participant with concrete, peer-oriented feedback regarding progress toward goals.

## SESSION V

### ACTIVITY

1. Mini-Group Sharing. Open group or fishbowl discussion technique is used to assess the value of the mini-group in helping achieve behavioral change goal and give useful feedback. Overall reaction to the mini-group concept is also discussed.
2. Continue Negative Feedback Exercise. The group members who did not participate last week sit in the center of the circle one at a time, or use the semi-circle. The procedure followed is same as reported in Session IV.
3. Evaluation of Behavior Change Goal Program. Same procedure as indicated in Session IV. Members are encouraged to discuss their feelings about their own progress and clarify any scores that confuse them. This method is used to facilitate their reaching their own goals and to give them another person's feedback.
4. "Outside the Workshop" Behavioral Change Goal Setting (Handout with discussion). The purpose of this activity is to enable each group member to establish a goal which he/she wishes to accomplish OUTSIDE the group setting (i. e., in a dorm, in a classroom, with a friend, etc.). Participants will have had practice on this, having worked on their "in the group" behavioral change goal. Each member receives a worksheet for the out-of-group goal setting and spends time alone working through Item 4.

### OBJECTIVE

1. To support and facilitate the impact of mini-groups on positive behavioral change as well as trouble-shoot problems.
2. Same as indicated for this exercise in Session IV.
3. Same as indicated for this exercise in Session IV.
4. To help group members bridge the gap between the group setting and the real world.

## SESSION VI

### ACTIVITY

1. Mini-Group Sharing. General discussion. How did it go? How helpful was this session in comparison with previous ones? Are you working on your in-group behavioral change goal in the mini-group?
2. "Outside the Workshop" Behavioral Change Goal Setting (Handout filled out to Item 4). Members join their mini-groups to complete Item 5 together. A group leader is present in each of these groups and aids in refining goals. Each member begins working on his/her goal as soon as possible. The mini-groups are to take time in their next two meetings to discuss each member's progress and/or problems concerning the goals.
3. Continue Negative Feedback Exercise. This activity is conducted as indicated in Session IV except at the end the "group" (symbolically) go to the center for feedback.
4. Personal Progress Form. This activity utilizes the same guidelines as in Session IV.

### OBJECTIVE

1. Same as reported for this exercise in Session V.
2. To help group members bridge the gap between the group setting and the real world; to provide opportunity to clarify behavioral change goals and overcome personal roadblocks.
3. Same as indicated for this exercise in Session IV.
4. Same as indicated for this exercise in Session IV.

## SESSION VII

1. Review of mini-group's final meeting and what the mini-group has meant to participants.

1. To assess the value and impact of the mini-groups for each participant as well as determine the value of the mini-groups in the overall CSW.

## ACTIVITY

2. Taking of Post-Tests (if evaluation is being done). Rationale for testing done now is based upon the desire to receive both pre- and post-tests for each participant prior to group's ending. Odds are better for accomplishing this goal during the last session than if a special testing time is scheduled for another date.
3. De-briefing Regarding Goals and Group Experiences. The remainder of this final session is oriented toward helping participants process feelings about their progress during the workshop.
4. Fantasy (15 min.). The group fantasizes a future hypothetical meeting of the group, e.g., at a restaurant, at a party, on a trip, at a social get-together. The group might also fantasize how it might help its members further their personal growth in future meetings.

## OBJECTIVE

2. To evaluate the direction and amount of change that occurred as a result of a student's participation in the CSW.
3. To allow participants to process feelings about the progress they feel they have made on their own, "in" and "out of group" behavior change goals, and to evaluate the effectiveness of the workshop.

## Couples Communication Skills Groups

The second communication skills group highlighted was developed by Richard Blouch at the Counseling Center at Millersville State College, Pennsylvania, and is entitled, "Couples Enrichment Workshop." It is designed to enhance normally functioning male-female relationships. It specifically excludes couples who are experiencing substantial conflict, or individuals whose relationship was so recently formed that expectations and roles have not had time to develop between partners. Blouch identifies five distinct purposes of the Couples Enrichment Workshop:

- (1) to assist couples to discover roles and expectations within the relationship
- (2) to help partners discover the strengths and weaknesses of their relationship
- (3) to help individuals discover the stereotypes and expectations which they have learned to project on their partners
- (4) to increase openness and improve communications within the partnership
- (5) to reduce "gamesmanship" and increase authenticity and intimacy within the relationship.

Ideally, the number of participants should not exceed twelve. The workshop is designed to be offered in either two six-hour sessions, with up to a week intervening between sessions, or four three-hour sessions in consecutive weeks. Prior to the first session the group leader conducts a screening interview with each couple seeking inclusion. Only couples who give evidence of a normal relationship should be selected. The motivation

for wanting to be in the workshop must be to improve a relationship rather than to repair a relationship which is fraught with hostility, dominance-submission, or other disruptive patterns of relating. Another purpose of this interview is to select couples who are similar in regard to the length and nature of the relationship bond. A mixture of married, engaged, cohabiting and dating couples can benefit from the workshop but not, in the opinion of the author, as well as a group of couples of similar relationship status.

The author provides an overview of the activities used and objectives realized during each of the four sessions of the Couples Enrichment Workshop. In order to convert this outline into a two-session model one simply combines the activities of the first two sessions into one six-hour session and does likewise for the last two sessions. The author clearly prefers the two six-hour session format because of the higher intensity generated within sessions and the increased continuity afforded. Below is the Couples Enrichment Workshop outline as developed by Blouch.

### SESSION I

<u>ACTIVITY</u>	<u>OBJECTIVE</u>
1. Leader Introduction (5 min.). Leader introduces self and the purpose of the workshop.	(1) To establish an open, trustful, atmosphere; (2) to encourage the exchange of perceptions by the partner; (3) to bring to awareness the hidden agendas which partners have for their relationships.

## ACTIVITY

## OBJECTIVE

2. Introduction of Workshop Members via Role Reversal (20-30 min.). Partners introduce each other by assuming what they think are the characteristics of their mate.
3. Contracting by Workshop Members (20-30 min.). Each person writes at least one personal goal for the workshop. The goals are shared with the group and time is allowed for feedback.
4. Administration of the Barnett-Lennard Relationship Inventory, optional (30-40 min.).
5. Partnership Roles (35-40 min.). Each participant makes a list of the roles he/she holds in his/her relationship and the roles held by the partner. Couples compare their lists. Agreement and disagreement are discussed within the group.
6. Relationship Sculpting (30-45 min.). Partners take turns positioning themselves and their partners into human sculptures. The processing which follows relates to new learnings about the relationships and changes which couples would like to make.
7. Processing (Variable).

## SESSION II

1. Male and Female Discussion Groups (40-50 min.). Male and female groups meet separately to discuss what the opposite sex member of the partnership does

- (1) to continue the open exchange between partners and couples;
- (2) to establish an identity with the workshop as a unit;

## ACTIVITY

## OBJECTIVE

- which they like or are "turned-on" by. The groups report and discuss these appreciated behaviors. This process is repeated for disliked behaviors.
2. Dyadic Interchange (45-60 min.). Couples take turns sitting in the middle of the circle for this exercise. The partners take turns telling each other five behaviors which they notice and emotions associated with these behaviors.
  3. Physical Mirroring (20-30 min.). The participants are told to mirror their partner physically without any verbal communication. The processing is aimed at discovering ~~who leads and the ability to exchange~~ and share leadership.
  4. Relationships Assessment Questionnaire (Peterman). This questionnaire is assigned as voluntary homework to be done before the beginning of the third session.
  5. Processing (Variable).

- (3) to have couples learn about and share the strengths and weaknesses of their relationships.

## SESSION III

1. Couples report on their use of the Relationship Assessment Questionnaire (20-30 min.).
2. Echoing (25-40 min.). Starting with verbal mirroring or echoing, couples are taught Thomas Gordon's "active listening" skills. The group is broken into triads to practice this skill.

- (1) to help partners become sensitive to the verbally and non-verbally expressed needs of each other;
- (2) to teach and practice the helping skill of active listening (Gordon, 1970).

ACTIVITY

OBJECTIVE

3. Helping Communications (60-75 min.).
4. Non-verbal Expression and Recognition of Emotions (15-20 min.).
5. Processing (Variable).

SESSION IV

1. Effective Confrontation. Through the use of "I messages" partners learn how to tell each other negative effects they experience in their relationship without resorting to judgmental or guilt inducing messages. "I messages" have a three part content:
  - (1) the emotion of the sender,
  - (2) the behavior of the partner, and
  - (3) the concrete effects of the partner's behavior on the sender (Gordon, 1970).
2. Problem Solving for Mutual Satisfaction (45-60 min.).
3. Contract Evaluation (20-30 min.). Participants check out the degree to which their contracts have been fulfilled.
4. The participants complete the sentence stem, "I learned that..." (30-40 min.).
5. Leave Taking (10-15 min.). Each participant is asked to take leave of every other participant except
  - (1) to provide the participants with skills they can use in dealing with problems and conflicts in their relationships;
  - (2) to help participants assess their learnings in the workshop;
  - (3) to provide feedback to the leader which he/she can use in improving future workshops;
  - (4) to help participants experience a feeling of closure with the ending of the workshop.

## ACTIVITY

## OBJECTIVE

his/her partner. This exercise provides closure for the workshop. I have changed this to have couples take leave of each other.

### Decision-Making Group

A futuristic, changing society and an uncertain economy require individuals to know their options and be able to make better decisions when faced with changes in life directions. Living in a complex, fast-paced society presents a person with multiple opportunities for involvement with the resulting need for making more decisions.

The ability to solve problems, choose among conflicting alternatives, and evaluate the quality of information are critical to effective functioning in our society. Individuals who have refined their skills in problem-solving and in exercising reasoned judgment increase the likelihood that the decisions they make about future life directions will be fulfilling and satisfying.

Decision-making skills groups usually consist of a series of exercises and lecturettes which heighten people's awareness of the processes involved in arriving at sound decisions. The structured decision-making group described in this monograph was developed by Si Clifton and Bob Nejedlo in the Counseling and Student Development Center at Northern Illinois University. Their program is designed to make participants aware of the decision-making process, to consider alternatives, to predict outcomes, to develop strategies, and finally to make decisions based on a systematic process. A basic premise

of the program is that the skills involved in decision-making and the process utilized in arriving at a decision can be taught and practiced. The resultant learning can then be transferred to practical application in real-life situations.

### Group Format

"Decision-Making" as designed by Clifton and Nejedlo has as its main purpose the providing of knowledge and skills which will help participants make better choices and consequently be able to enjoy more satisfying, productive life experiences. Group size is practically unlimited, and it has worked well with both small and large groups. Groups should have at least six members, and if more than twelve, one facilitator for each additional twelve should be added. There are three two-hour sessions. The format includes informative subject matter, decision-making activities, participant input, group interaction, and evaluation. A detailed description of the decision-making group as outlined by Clifton and Nejedlo follows:

### SESSION I (Two Hours)

<u>ACTIVITY</u>	<u>OBJECTIVE</u>
1. Self-evaluation. Participants complete a self-evaluation from "Assessment of Decision-Making Skills" (handout #1) designed to determine the degree of their skill in decision-making.	1. To obtain a pre-test measure of participants as decision makers.
2. Warm-up exercise. Group participants introduce themselves by using a "going-around" technique.	2. To begin to develop group cohesiveness.

## ACTIVITY

3. **Making Decisions.** Introduction to the decision-making process, the relative importance of decisions, and good vs. bad decisions through use of structured activities such as "Decisions Come in All Colors" (handout #2) and "A Good Decision is..." (handout #3).
4. **The Person and the Process in Decision-Making.** Lecturette on major processes and limitations of skillful decision-making.
5. **Highlighting Values.** Discussion of one's personal values; recognition of one's own values and the values of others; use of exercises "A Fantasy Trip" (handout #4) and "What Do People Really Want" (handout #5).
6. **Setting Objectives.** Establishing clear, concise objectives from one's values through use of exercise "Specifying What You Want -- Objectives" (handout #6).
7. **Identify Alternatives.** Through use of a homework assignment, "What Are Your Real Alternatives" (handout #7), participants are given a structured guide which takes them through the steps involved in establishing real alternatives. Each participant is asked to formulate alternatives to a given situation by stating objectives, obtaining further information; and accounting for abilities, interests, and values.

## OBJECTIVE

3. To begin to understand the concept of decision-making; to know that different decisions require different degrees of thought; and to understand what constitutes a good decision.
4. To understand the impact of one's values, use of adequate relevant information, and use of effective strategies; to understand limitations of personal capabilities, motivation, and environment.
5. To begin to own one's values and to respect the values of others.
6. To know how to formulate objectives that will let one know when the goal is attained.
7. To enable the participants to learn the process of setting alternatives by establishing some real alternatives.

SESSION II (Two Hours)

ACTIVITY

OBJECTIVE

- |  |   |
|--|---|
| <p>1. Discovering Your Real Alternatives. Lecturette on the process of identifying alternatives with opportunity for questions and discussion.</p>   | <p>1. To gain further insight into the process of identifying alternatives with opportunity for integration into self.</p>      |
| <p>2. Using Information in the Decision-Making Process. Discussion of how to gain knowledge; and use of adequate, relevant information.</p>  | <p>2. To expand the participants' awareness of the importance of information.</p>   |
| <p>3. Information Awareness. Discussion of how to gather information; the most common mistakes; and the consideration of sources, objectivity, and releva</p>  | <p>3. To inform the participants of the value of critically analyzing input data.</p>   |
| <p>4. Exercise, "Touch All Bases." An activity utilizing informational bases like people, reading material, audio-visual media, and computers. Participants are presented a case in which a student needs to decide whether or not he should remain in college. The group members are asked to brainstorm resources to be explored before making the decision.</p> | <p>4. To encourage discussion of additional sources of information without making judgment about which information is best.</p> |
| <p>5. Judging the Quality of Information. Criteria for evaluating information using leader's expertise and exercise, "Do You Believe What You Hear and See?" (handout #9). This exercise is intended to help participants discern information that is written to influence others from information that reports the facts.</p>                                     | <p>5. To enable participants to judge critically all information gathered.</p>  |

## ACTIVITY

## OBJECTIVE

6. **Predicting Outcomes.** This exercise consists of teaching and discussing the steps involved in predicting outcomes. The group leader assigns and introduces the "I Predict" exercise (handout #10). The exercise is a homework assignment presenting four situations which call for a decision. For each situation participants are asked to identify three alternatives and a predicted outcome for each alternative.

6. To acquaint the participants with the procedures in order that they will be able to do the take-home exercise.

### SESSION III (Two Hours).

1. **Introduction.** Discussion of the homework exercise and at the same time review of the steps in predicting outcomes.
2. **Lecturette on Risk-Taking.** Discussion of the elements that influence the degree of risk people are willing to take and how to increase the chances of achieving a desired outcome.
3. **Involvement in exercise "Shoot the Works, Play It Safe, or...?"** (handout #11). This exercise is designed to show that people differ in their risk-taking behavior and may not be consistent in their risk-taking.
4. **Strategies For Selecting Alternatives.** Discussion of types of strategies often used in selecting one alternative over another: desire strategy, success strategy, avoidance strategy, and combination strategy.

1. To obtain feedback from participants relative to their involvement in the exercise.
2. To create insight regarding the range of risk-taking behavior.
3. To learn one's own risk-taking characteristics as well as those of others.
4. To acquaint participants with various types of strategies so that they will be able to identify the strategies they utilize in making decisions.

## ACTIVITY

5. "X, Y, Z Affair" (handout #12). This exercise consists of making six decisions based on three alternatives. Additional information is provided after making each decision. The exercise allows a person to utilize a variety of strategies in making the six decisions.
6. Alternate exercise in decision-making. If time permits, "Your Agent" (handout #13) can be used. In this exercise each participant is hired to make decisions based on certain information. A plan of action based on a strategy is to be written for each decision.
7. Summary--A review of the processes utilized in good decision-making.
8. Post-Evaluation. A post measure of decision-making skills is obtained through the use of the "Assessment of Decision-Making Skills" self-evaluation form. This is the same form mentioned in Session I.

## OBJECTIVES

5. To apply skills learned in the decision-making group; more specifically to know how to examine alternatives, use of strategies, preferences for probabilities, and desirability of outcomes in decision-making.
6. To gain further practice in decision-making.
7. To review and provide opportunity for participants to clarify the decision-making process in order to integrate the knowledge.
8. To assess change and growth relative to knowledge of good decision-making.

### Life/Work Planning Group

Life/work planning groups attempt to help people discover ways to blend their life and work goals so as to increase their overall satisfaction with the direction of their lives. They are based on the assumption that people can distill from an inspection of their overall life experiences key elements that will help them create a meaningful life/work orientation.

Life/work planning groups have been variously labeled as Life Planning Workshops, Life Directions Workshops, Career Development Groups, PATH, and Career Decision Making Groups. These approaches vary in the degree to which they focus on either establishing life directions or developing career objectives. For example, some life planning models might devote only one-fifth of the group time to actual consideration of career goals, while others might devote nearly the entire group experience to determining career objectives. Some life/work planning groups rely on external evaluation instruments (ability tests or interest inventories) while others employ a self-assessment format.

The life/work planning group highlighted in this chapter was developed by Howard Figler in the Counseling Center, Dickinson (PA) College, and is entitled PATH. According to Figler, the purpose of PATH is to provide a sequence of self-assessment exercises which assist individuals to create a life/work style that satisfies their internal and external needs. PATH operates on the premise that an individual can take charge of his/her life-work development only if he/she assesses all of the following: (a) the life priorities which will compete for attention with work priorities; (b) the chief values and pleasures that he/she hopes to satisfy in a life's work; (c) the abilities which he/she possesses and would most like to use in a life's work; (d) a creative imagining of a situation in which all of his/her work needs might be satisfied and all of his/her talents might correspond to the needs of a particular work environment. Thus, the general objectives of PATH are to help the individual to:

- (1) integrate work priorities with life priorities;
- (2) find or create work situations in which he/she enjoys the work as much as possible;
- (3) choose work that he/she regards as highly important, worth doing, and intrinsically rewarding;
- (4) make use of his/her strongest talents, abilities, skills;
- (5) create the idea of a life/work state in which his/her unique combination of values and talents is fully satisfied.

In order to achieve the stated objectives the PATH program has incorporated several key features. The key features identified by Figler are:

Self-Assessment: The individual is the best judge of him/herself; therefore, he/she makes all assessments of his/her personal attributes that are work-related. No external assessment devices are used.

Client-Centered: Exercises serve as stimuli which enable individuals to interpret their own experiences; the student is given complete responsibility for these interpretations.

Group-Oriented: The sequence of exercises is designed for most effective use with small-group interaction. These exercises can also be used effectively in one-to-one counseling, or the individual can employ them on a self-instructional basis.

Liberal Arts: The program is chiefly helpful for those who have numerous options in their life/work planning, such as liberal arts students, and any other people who have the freedom to seek a wide variety of work possibilities.

Process-Oriented: PATH is not oriented toward decisions, closure, or final outcomes. Rather, it teaches individuals ways of thinking about life/work choices, and a process for sharpening their objectives. The process can be used by individuals again and again, whenever they desire to change objectives or a work situation.

Cumulative: PATH presents the view that everything an individual does in life can be applied to a future work situation. Since "nothing that you do is ever wasted," the individual has many degrees of freedom to experiment with work objectives.

#### Group Format

Selection of group members is not limited only to those who are undecided or unhappy over their career and life directions, especially if that choice was based on a limited examination of desired life style, underlying values, basic abilities, and functional skills. Since the PATH program requires approximately fifteen hours of actual group time to complete, it is desirable that participants are prepared to invest the necessary amount of time and energy to make the process work. The number of participants can vary from as few as four to as many as thirty, with the ideal number being around twenty. The group format is designed so that approximately three exercises can be completed in each of the six, two and one-half hour sessions.

During the course of the group four major life/work dimensions are explored: (1) life/work style, (2) values, (3) abilities, and (4) creative career. Exploration in each of these four areas is accomplished by a series of exercises. Suggested time limits, format, and objectives as outlined by

Figures are presented below. Many of the activities indicated below are described more fully in PATH, a career workbook for Liberal Arts students.

SESSION I -- Examining Life/Work Style

<u>ACTIVITY</u>	<u>OBJECTIVE</u>	<u>FORMAT</u>
1. <u>Job Style:</u> "Security" "Excitement/Risk" "Make Money" "Free Time" (45 minutes).	To present individuals with 4 dramatically different motivations for working, and ask them to dwell upon the relative attractiveness for themselves.	Interaction in a small group of 4
2. <u>Male/Female:</u> "How has your career development been affected by the sex role identification encouraged for you by significant others?" (45 min.)	To evaluate the influence of sex role identification upon individuals' life/work aspirations, and ask them to consider how these aspirations might have been different if they had been born the other sex.	Small group of 4
3. <u>Distribution of Time:</u> "How do you choose to allot your time among (a) Formal work, (b) Informal work (off the job), and (c) Recreation?" (60 minutes)	To consider the relative importance of paid employment, non-paid work, and leisure activity in terms of time individuals are willing to allocate to each.	Individuals work alone, then small group of 4 interacts

SESSION II -- Exploring Values

1. <u>Life Values/Work Values/</u> "What conflicts may exist between your Life Values (Family, Community, Geography, Religion,	To suggest that work needs must be congruent with other life priorities, if individuals expect to satisfy all life and work needs.	Individuals work alone, then interact with a group of 4
--	--	---

ACTIVITY

OBJECTIVE

FORMAT

Health) and Work Values (Money, Power, Security, Fame, Independence, etc.)?" (60 minutes)

- 2. Traditional American Values: Which are the most important to you? (health, happiness, stand up for rights, respect for parents, sick and needy, hard work and productivity, etc.)"

To explore values which are commonly espoused, and decide which of these the individuals regard as most important in their life/work style.

Small group interaction

- 3. Work with People: "Which ways of working with people are most appealing to you (instruct, supervise, negotiate, manage, counsel, etc.)?" (15 minutes)

To ask individuals to discriminate among 15 different ways of working with people so that they may learn that some are much more appealing than others.

Small group interaction

SESSION III -- Distilling Key Values

- 1. Occupational Prestige: "Which occupations don't have enough prestige or status to satisfy you?" (30 minutes)

To present individuals with 90 occupations titles and ask them to discover their needs for occupational status by considering why certain titles would not be acceptable.

Individuals work alone, then interact with a group of 4

- 2. Enjoyable Activities: "What things do you most enjoy doing? How

To discover the activities that are most purely pleasurable to individuals when they are freed from constraints by

OBJECTIVE

FORMAT

might you incorporate them into your future work?" (45 minutes)

other people or organizations; to consider whether these preferences are congruent with the schooling or employment anticipated by the individuals.

Individuals work alone, then interact with a group of 4

3. Summary of Values: "Review all of the values which you have determined from previous exercises; summarize these for use in the 'creative career' exercise later." (15 minutes)

To establish a unified record of all high priority needs and values identified by each individual.

Individuals work alone

SESSION IV -- Examining Abilities

1. Trial Occupations: "Select 6 or more of these occupational titles which appeal to you. What might they have in common?" (A new "Occupational Deck" of 150 cards is used here -- 30 minutes)

To introduce individuals to a wide array of occupations most often desired by college graduates, ask them to choose several on the basis of pure appeal, and then analyze the personal and subjective meaning that these choices may have for them.

Individuals work alone, then interact with a group of 4

2. Self-Assessed Abilities: "Rate yourself on these 30 separate abilities scales." (15 minutes)

To obtain baseline data regarding individuals' assessment of their strengths and weaknesses, in terms of a set of general abilities that have direct relevance to a variety of occupations.

Individuals work alone

<u>ACTIVITY</u>	<u>OBJECTIVE</u>	<u>FORMAT</u>
<p>3. <u>Trial Occupations and Abilities:</u>            "Decide, with the help of your small group, which abilities are most essential to success in certain occupations."            (45 minutes)</p>	<p>To examine certain kinds of work and discover what particular abilities are necessary for competence in these work situations; then, to evaluate the degree to which individuals possess the requisite abilities for the kinds of work that interest them most.</p>	<p>Small group interaction</p>
<p>4. <u>Functional Skills:</u>            "Self-inventory your 'functional skills' from a roster of 85 such skills (managing, speaking, writing, computing, counseling, organizing, planning, building, etc.); then refer to experiences in which you have used these skills."            (45 minutes)</p>	<p>To have individuals consider which functions they perform best in work situations, and ask them to validate their view of these things they can 'do' by describing situations in which they have done them previously.</p>	<p>Individuals work alone, then interact with a group of 4</p>

SESSION V -- Identifying Skills and Creating Career Flexibility

<p>1. <u>Achievements:</u>            "Name as many things as you can that you have done that (a) you enjoyed, (b) you did very successfully by your own standards, (c) you felt were important. Ask your small</p>	<p>To examine individuals' peak experiences for the discovery of hidden talents; to ask individuals to talk about these talents in a situation where they might be applied to the needs of an employer.</p>	<p>Individuals work alone, then small group interaction, then "group interview" for a hypothetical job.</p>
---	---	---

- group to help you identify which functional skills you were using. Apply for a hypothetical job and talk about your skills."  
(75 minutes)
2. Summary of Abilities:  
"Review all of the abilities and skills which you determined from previous exercises and summarize these for use in the 'creative career' exercise later."  
(15 minutes)
3. Types of Employers:  
"Self-inventory 5 or more kinds of employing organizations which you think you would most prefer, from a roster of 80 such employers."  
(30 minutes)
4. Random Career:  
(The group facilitator demonstrates that any combination of values, abilities, major fields, and employers can be integrated to form a sensible career; he or she does this by taking various values, abilities, majors, and employers from different group participants, and then creating a definition of an integrated career).  
(30 minutes)
- To establish a unified record of all high priority strengths that have been identified by individuals in cooperation with group members.
- To ask individuals to begin thinking about the kinds of work environments that might best satisfy their personal needs
- To show that any combination of personal needs and attributes can be unified in a particular kind of work, if the individual applies some imagination to this process; to show that certain work needs must not necessarily be surrendered in favor of other needs.
- Individuals work alone
- Individuals work alone
- Facilitator demonstrates to the group and asks for their help in the process.

SESSION VI -- Creating Career Directions and Evaluating Options

<u>ACTIVITY</u>	<u>OBJECTIVES</u>	<u>FORMAT</u>
1. <u>Creative Career:</u> "Summarize your Values, Skills, Preferred Employers, and Major Field(s). Choose one employer you prefer, and decide how working for this employer might enable you to satisfy all of your personal attributes." (90 minutes)	To construct the idea of a life's work which would incorporate all of an individual's highest priority needs, abilities, and other preferences. It is best if this creative career is one which doesn't yet exist in the form defined by the individual.	Individuals work alone, then with assistance of small group of 4
2. <u>Group Interview:</u> "Report your 'creative career' to a small group of friends whom you haven't seen in years." (30 minutes)	To provide the individual with practice in describing life/work aspirations, explaining them to people who may not understand readily, and interpreting how they fit his/her personal needs and attributes.	Small group members role-play the "group of friends" and stimulate the individual to support and defend the career idea she/he has created.
3. <u>Evaluation Table:</u> "Review your state of 'readiness' for career exploration by asking yourself relevant questions ("Have I met people who do this kind of work?" "Do I know where the training is available?" "Do I know what resources are required?")." (30 minutes)	To determine whether individuals have done the necessary investigation to support their tentative life/work aspirations; to learn whether they have collected enough information to warrant an investment of time, resources, and energy toward this objective.	Individuals work alone, then interact with small group

## Interpersonal Skills Group

The ability to initiate, develop, and nurture meaningful interpersonal friendships can have profound effects on a person's sense of well being and mental health. Many people, however, are unable to relate openly and comfortably with others. Those of us who work in mental health professions deal constantly with individuals who have been unable to initiate or sustain contacts with others and/or are unable to respond appropriately to people who reach out to them. In short, we work with many people who have not been successful in acquiring the interpersonal skills they need to nourish and improve their self-image.

During the past few years a number of structured groups has been designed to enable people to develop effective social and interpersonal skills. The goal of many of these programs is not only to increase participants' communicative skills but also to help them develop contact skills and create meaningful friendships. This is both a quantitative and qualitative goal. It is quantitative in that the programs try to help individuals increase the frequency of their interpersonal risk-taking and social contact approach behaviors. By the same token the goal is qualitative in that the groups do not promote "interaction without integrity," nor do they consider increased frequency of interpersonal behavior a successful outcome unless some corresponding decrease in social anxiety and negative self-evaluative thinking has occurred.

The leaders of groups which focus on increasing an individual's ability to initiate and develop relationships must use extreme caution in their choice of exercises or procedures used during the beginning sessions. Participants often enter

the group with a high level of anxiety which, if magnified by the initial activities, can become so inhibiting that some members will choose not to continue with the group. Therefore, the first session at least should not be too demanding interpersonally and should be designed to reduce the counter-productive fear level evidenced by many participants.

The interpersonal skills group described in this monograph is entitled "Friendship Initiation and Development," and was designed by Michael Menefee in the Counseling and Psychological Services Center at the University of Texas, Austin.

Prior to the beginning of the six two-hour sessions screening interviews take place. The purposes of the screening interviews are: (1) to obtain a commitment from each person to attend every session; (2) to screen out clients for whom the group may be inappropriate; and (3) to attempt to make the group heterogeneous with regard to degree of cautiousness in verbal expression. Ideally, the number of group members should not exceed twelve, including the two leaders. Below is an outline of the group as developed by Menefee.

### ACTIVITY

### OBJECTIVES

#### SESSION I

1. Introductions (5 minutes).  
Leaders introduce themselves, giving name and brief information about themselves. Then a name-chain game is used to introduce participants. One member is asked to introduce

1. To "imprint" members' names on each group member, as well as to establish a warm, friendly atmosphere.

## ACTIVITY

- him/herself (as well as everyone to whom he/she has already been introduced) to person on his/her right, leaving the last person to recite the first names of all of the other members to the first person who started the chain.
2. Review of Group Format (5 min.). Leaders briefly discuss the goals of the program, emphasizing the focus on skill acquisition through modeling and behavioral rehearsal and on practice and performance of skills between sessions. Sessions usually consist both of set exercises and discussion of individual members' problems or concerns in the area of friendship development.
  3. Participant Sharing of Goals (45 min.). Leaders ask participants to tell the group why they came to the group, what their goals are in terms of coming to the group, and what their concerns are in friendship initiation and development. Leaders attempt to draw members out, specifically in terms of goals and member assessment of friendship difficulties.
  4. Modeling and Rehearsal of Initiating Conversations (35 min.). Leaders introduce this exercise by commenting that the first three sessions will focus on skills involved in initiating conversations. Leaders briefly discuss these skills (asking open questions, providing and responding to "free personal information," and searching for an integrating topic of conversation). Leaders then model for several

## OBJECTIVES

2. To clarify group structure roles and expectations of participants (especially in terms of providing content for discussion/rehearsal of individual members' difficulties).
3. To emphasize importance of establishing goals for this experience, particularly in terms of changes each member hopes to realize within his/her own behavior.
4. To begin to model and rehearse several of the more important skills in friendship initiation.

## ACTIVITY

## OBJECTIVES

- minutes an attempt to initiate conversation, demonstrating the appropriate skills. Members are then asked to form pairs and share and elicit basic but personal information about one another, attempting to ask open questions, respond to and provide unsolicited personal information or feelings, and arrive at a mutually interesting topic of conversation, if at all possible.
5. Processing of Exercise (15-20 min.). Leaders initiate a discussion of the participant response to and experience during the exercise, focusing on whether the conversation was balanced or shared, whether the content was relatively impersonal or personal, how the participant felt during the conversation (with attention to any positive or negative self-statements), and how the participant experienced his/her partner.
  6. Discussion of Homework (5 min.). Members are asked to monitor the frequency of initiated social approaches during the coming week using a monitoring booklet.
  7. Completion of Feedback Cards (5 min.). Members are asked to complete a session evaluation card.
  8. Handout on Initiating Relationships.
5. To review amount of success or difficulty encountered in the exercise; to encourage process of reviewing interactions and providing feedback to one another.
  6. To obtain baseline data.
  7. To obtain session evaluation data.
  8. To provide a cognitive framework of social approach.

## ACTIVITY

## OBJECTIVES

### SESSION II

1. **Collection and Review of Self-Monitoring Data (15-20 min.).** Leaders collect self-monitoring booklets and inquire of participants what they learned, if anything, from monitoring: in what situations, if any, were they more likely to approach someone, what was ratio of initiated versus received approaches. Leaders emphasize situational aspects and individual variances; they also attempt to elicit negative and positive self-statements regarding specific successful or unsuccessful approaches. Risk-taking is reinforced.
  2. **Discussion of Hand-Out (15 min.).** Leaders develop a discussion of hand-out distributed in Session I, focusing on identifying facilitators, helpful "openers," and respondent cues suggesting interest in continuing the conversation.
  3. **Continued Practice in Greetings and Initial Approach (60-75 min.).**
    - a. Leaders ask several pairs of participants to model various initial social approach situations (meeting someone in class, in the dorm, etc.). The situations may be elicited from the group or taken from the Greetings and Initial Approach cards (a deck of cards identifying situations and roles for two interactants for each situation).
1. To obtain baseline data and to sensitize members to frequency and situational aspects of their approach behavior.
  2. To further develop cognitive framework, as well as define terms and desirable behaviors.
  3. To model and shape desirable behaviors of initial social approach.

## ACTIVITY

## OBJECTIVES

One partner of each pair is asked to attempt to initiate a conversation with his partner following role-play situational context. Emphasis is placed on sharing and eliciting personal information (shifting from impersonal "What's your major..." to more personal "How do you feel about..." questions and statements), with continued reminders regarding asking open questions, providing "free information," and searching for an integrating topic. Each role-play is processed on these dimensions. Repeat role-plays until satisfactory models are shaped.

- b. After the basic skills have been modeled and clarified for and by the group, leaders distribute the Greeting and Initial Approach cards to triads of group members. In each triad, the cards identify one observer and two interactants. All triads simultaneously practice role-playing the desired behaviors, with the observer providing feedback to interactants at the end. Then participants change roles and repeat either same situation or a new one (exchanging cards among triads.).
- c. Leaders develop a brief discussion of alternative hypotheses to personal rejection, should a social approach be rejected or terminated. Participants

## ACTIVITY

are encouraged to consider various reasons that might cause rejection other than that one might be disliked--such as, the other might not be "open" to any more relationships, or that a "good fit" between the two was not present. The development of a social network is described as involving sorting out people you enjoy and who enjoy you, which implies that others may sort one out as well. To be "screened out" is not, however, to be disliked.

4. Hand-out: "Example of Homework Objectives," and Identification of Homework Objectives (15 min.). Leaders distribute hand-out on typical objectives, focusing on the objectives listed under "initial approach" (versus repeated contact, spread, and arranging a future interaction). Leaders urge participants to select or create an objective that will extend and challenge their present level of skill or comfort, suggesting that different members will vary in what they consider difficult or important.
5. Distribution and collection of Feedback Cards (5 min.).

## SESSION III

1. Homework Review (35 min.). Participants report on progress made toward the objective chosen last session. Leaders encourage group to: (a) help problem-solve difficulties;

## OBJECTIVES

4. To instigate behavior change outside the group

1. To reinforce and/or problem-solve progress on homework objectives in order to promote behavior change and risk-taking.

## ACTIVITY

## OBJECTIVES

(b) cognitively restructure harmful self-statements, and  
(c) elicit affective responses from members ("How did you feel when...").

2. Exercise in Self-Disclosure  
(60 minutes).

a. Didactic. Leaders talk for a few minutes to and with the group about the process and reciprocal character of self-disclosure--how it is dependent on mutual sharing--and that pacing ( distributing

personal information over time) is extremely important as it allows interactants time to evaluate their interest in continuing the relationship. Appropriate self-disclosure, assuming neither participant terminates the process, develops trust and provides the conditions for a wide range of intimate behaviors. Leaders attempt to create a group discussion on this topic, noting that self-disclosure does not mean being completely honest or "telling all" the first time you meet someone (differentiating it from encounter group norms).

b. Leaders process this exercise with the group, focusing on determining which questions were perceived as most difficult, what level of disclosure was reached, and whether a feeling of closeness was

2. To shape more open sharing of personal feelings and experiences; to desensitize participants who are anxious about self-disclosure.

## ACTIVITY

engendered. Leaders re-emphasize that disclosure is a critical but gradual process that produces trust and results from the decision to deepen a relationship.

3. Discussion of Johari Window (15 minutes). A diagram of the Johari Window is distributed and discussed.
4. Determination of Homework Objectives (15 minutes).

## SESSION IV

1. Review of Homework Objectives (25-30 minutes). In addition to usual procedure of reviewing homework experience, leaders attempt to elicit "feeling" talk, personal concerns related to homework or other events in relationship building.
2. Behavioral Rehearsal of Positive Responses to Individual Participant Concerns, Skill or Performance Deficits (90 minutes).
  - a. Leaders pass out blank cards to participants asking each to write down on the card a behavioral situation or interaction of concern or difficulty to him/her in area of friendship initiation and development (e.g. how to tell someone you don't want to get romantically involved; how to ask someone out for a date).

## OBJECTIVES

3. To provide cognitive framework for self-disclosure.

1. To reinforce risk-taking and performance of objectives, to problem-solve, and to promote self-disclosure (more open responses to "How are you?").
2. To individualize treatment of skill or performance deficits specific to each member. Further, to provide additional practice in self-disclosure.

## ACTIVITY

## OBJECTIVES

- b. Each person's specific concern or behavioral difficulty is discussed or role-played in center of the group, with focus on developing appropriate responses to the stressful situation. Leaders attempt to solicit recommendations and reactions from the group.
3. Identification of Homework Objectives (5 minutes).
4. Completion of Feedback Cards (5 minutes).

## SESSION V

1. Review of Homework Objectives (35 minutes).
2. Coached Modeling of Appropriately Providing Negative Feedback and Disagreement (30 minutes).
  - a. Group members role-play providing criticism to a friend, with appropriate coaching on importance of specifying problematic behavior to the other, suggesting positive alternatives, conveying sense of continued interest in the relationship ("When you do X, I feel Y.").
  - b. Group members role-play disagreement, e.g., one partner voices an opinion on a movie, other disagrees. Point out importance of forming your opinion as your personal reaction ("I was
2. To demonstrate appropriate feedback and disagreement styles:

## ACTIVITY

## OBJECTIVES

- really moved by...") as opposed to making blanket, rigid statements ("That movie is bad and everyone should think so.").
3. **Self-Disclosure. Providing Feedback/Personal Reactions to One Another (55 minutes).** Leaders ask participants to express one positive and one negative reaction to at least one other member's behavior, using appropriate feedback model. It is helpful to pull the group into a tight circle for this exercise. This experience should be introduced as an opportunity to learn about one's behavior and others' reactions to it. Leaders should attempt to clarify feedback, attending to recipients' emotional response.
  4. **Identification of Homework Objectives (5 minutes).** Simply suggest members identify an objective, allowing a few moments for decision.
  5. **Completion of Feedback Cards (5 minutes).**
3. To provide information to participants regarding appropriate (likeable) and inappropriate (disturbing or distancing) behavior; to provide practice in providing and receiving personal feedback.

## SESSION VI

1. **Review of Homework (25-min.)**
2. **Personal Feedback Continued (50 min.).** Ask group to form pairs and spend 5-10 minutes sharing with each other their initial impression of each other, and how that impression
2. To further provide specific information to each individual of his/her behavior and feelings as perceived by others; to provide warmth

## ACTIVITY

## OBJECTIVES

- has changed. Have members rotate to new partners and repeat this exchange. Leaders participate, providing any feedback they feel is appropriate (this is an opportunity to communicate privately with any specific individual in the group). Continue rotation until time is up or all possible pairs have exchanged impressions.
3. **Articulation of Future Goals and Objectives (30 min.).** Participants are asked to identify several behaviors they would like to change or increase/decrease in frequency. Areas of change since group began are also discussed.
  4. **Distribution of Self-Monitoring Booklets (5 min.).** Leaders provide same instructions as in Session I, asking for the booklets to be dropped off or mailed at end of one week.
  5. **Distribution of End-of-Group Evaluation Questionnaire (5 min.).**
- and closeness (usual result) through mutual disclosure of reactions.
3. **To stimulate members to consider developing personal change goals.**
  5. **To obtain client satisfaction data.**

### Parenting Skills Group

Being a parent is one of an individual's most important roles during his/her lifetime. Parenting can be a source of immense pleasure and reward as well as the cause of inner turmoil and feelings of inadequacy. It is little wonder that the nature of the "ideal" relationship between parents and their children has been the subject of numerous books and articles.

Increasingly people are becoming aware of the importance of developing effective parenting skills and are buying books and enrolling in programs to increase such skills. Within recent years several structured group models for developing key parenting skills have emerged and are gaining popularity. These models blend experiential activities, lecturettes, and homework assignments into a time-limited group format. To help insure the acquisition of effective parenting skills, homework assignments give parents a chance to reality-test and implement the concepts and behaviors stressed during group sessions. Leaders often suggest that participants read one or more of the following books: Between Parent and Child (Ginott, 1965), Parent Effectiveness Training (Gordon, 1970), or Living with Children (Patterson and Gullison, 1973).

The parenting skills group described in this monograph is entitled "More Effective Parenting Program," and was developed by Lester Pearlstein and Joel Lipson in the Counseling and Psychological Services Center at the University of Texas, Austin. They indicate that in order to implement the model successfully, a leader should know the principles of behavior modification and have a general knowledge of basic helping skills and "good communication skills," as well as some knowledge of child development.

#### Group Format

The "More Effective Parenting Program" is designed for a group of approximately ten parents. Each of the nine weekly sessions lasts for two hours and is structured so that key parenting skills are developed in a

carefully designed sequence. Because the skills acquired or accentuated during this program build on one another, then, it is detrimental to the program to leave out any of its components. The model is designed to be co-facilitated, and the time limits suggested for each activity should be viewed as guidelines and not as rigid determinants of activity length.

An overview of the group format, exercises used, and objectives sought for each session as outlined by Pearlstein and Lipson is presented below.

### SESSION I

<u>ACTIVITY</u>	<u>OBJECTIVES</u>
1. Introduction to structure and mechanics of program--need for consistent attendance and starting on time (15 minutes).	1. The objectives of Session I are to: (1) orient parents to structure, mechanics and philosophy of MEPP program; (2) sensitize parent to his/her implicit expectations from his/her children, and how these expectations might interfere with responsiveness to the child and creation of an atmosphere conducive to the emotional adjustment of the child.
2. Introduction of group members and use of some "ice breaker" getting-acquainted exercise. (15 minutes).	
3. Didactic presentation and discussion (15 minutes).	
a. Home atmosphere conducive to optimal emotional development.	
b. "Love and limits."	
c. Importance of understanding, warmth, acceptance, guidance and support (use of employment and marital relationships as examples).	
4. Discussion of how home atmosphere is affected by parent's explicit and implicit expectations (15 minutes).	

## ACTIVITY

## OBJECTIVES

5. Expectations exercise  
(20 minutes).
  - a. Parent writes down kind of child he/she would like to have--descriptive adjectives.
  - b. Parent writes down way child actually is--descriptive adjectives.
  - c. Discussion of differences between "a" and "b"; expectations tied to "a" affect home atmosphere, parent's understanding, warmth, and acceptance.
6. Childhood memories exercise  
(20 minutes).
  - a. Parent is relaxed and comfortable.
  - b. List of common childhood experiences is read to help parent remember what it is like to be a child.
  - c. Brief discussion.
7. Didactic presentation and discussion of concept of script (25 minutes).
  - a. "What was your parent's script for you?"
  - b. "How did this affect the atmosphere in your home?"
  - c. "What is your script for your child?"

## ACTIVITY

## OBJECTIVES

- d. "How might your script get in the way of your understanding and acceptance?"
8. Homework
  - a. List of stimulus situations.
  - b. Parent asked to respond to "My child would be feeling..."
  - c. Parent asked to attend to his/her interactions with child, and identify own feelings and child's feelings.

## SESSION II

1. General discussion of homework (10 minutes).
2. Competency exercise (20 min.)
  - a. Each parent, in turn, labels feelings in one homework stimulus situation.
  - b. Leader facilitates identification and labeling of feelings.
  - c. Distinction made between feelings and overt actions.
3. Didactic presentation and discussion of the ways of communicating acceptance -- non-verbally and verbally (25 min.)
  - a. Empty chair exercise -- one parent talks to empty chair and experiences what it feels like not to be responded

The objectives of Session II are to: (1) sensitize parent to child's feelings; (2) sensitize parent to what he/she may be communicating to the child nonverbally; (3) have parent become aware of and practice empathic listening and communication.

## ACTIVITY

## OBJECTIVES

- to. Identify what leader could do nonverbally to make speaker more comfortable.
- b. Parent-child exercise -- parents form pairs and take turns playing child and parent. Child gets down on knees and looks up to standing parent and asks for permission to do something. Parent refuses firmly. Reverse roles.
- c. Brief discussion.
- 4. Didactic presentation and discussion of verbal communication of acceptance and understanding -- miscommunication vs. active empathic communication (10 min.).
- 5. Practice of empathic communication -- messages broken into content and affect. Each parent in turn practices four ways of responding to message of another parent (50 min.).
  - a. Parroting response -- word for word repetition.
  - b. Paraphrase content response -- in own words.
  - c. Labeling of implied or expressed feeling.
  - d. Putting it all together -- respond in concise own words to content and affect. (tone of voice important).

## ACTIVITY

## OBJECTIVES

6. Homework (5 minutes).
  - a. List of stimulus child-statements -- parent is asked to write empathic responses to the statements.
  - b. Parent asked to list five statements by child during week, and empathic response made, or empathic response he/she would like to have made.

### SESSION III

1. General discussion of homework (10 minutes).
2. Competency exercise (40 minutes).
  - a. Parent asked to write down two interactions with his/her child wherein feelings are implicitly or explicitly expressed.
  - b. Each parent, in turn, role plays one of these situations -- delivering message to parent next to him/her.
  - c. Receiving parent responds empathically, and rest of group is encouraged to facilitate.
3. Didactic presentation and discussion of sequential order of parenting responses (10 min.).

The objectives of Session III are to (1) increase understanding and comfort regarding use of empathic listening, (2) expose parents to non-threatening ways to express their own needs and feelings.

ACTIVITY

OBJECTIVES

- b. Parent asked to generate five situations during week in which "I messages" were used or could have been used.

SESSION IV

1. General review of homework (10 minutes).
2. Competency exercise (30 min.).
  - a. Pick situation from previous week where "I message" was appropriate.
  - b. Each parent, in turn, role-plays or describes situation to next parent.
  - c. Receiving parent asked to identify what his/her feeling might be and respond to an "I message."
3. Discussion of relationship of response style and expectations. Importance of tolerance, flexibility, and checking out the reasonableness of expectations (10 minutes).
4. Reasonableness of Expectations Exercise -- worksheet gives parent chance to identify expectations, tolerance limit, child's real capabilities and difficulties -- discussion (25 minutes).
5. Didactic presentation and discussion of limit setting as next phase in sequence of parent response (15 minutes).

The objectives of Session IV are to: (1) increase the parent's understanding and use of "I messages," (2) increase the parent's sensitivity to the reasonableness of his/her expectations, (3) enhance the parent's understanding of and skill in setting rules or limits with his/her child.

## ACTIVITY

## OBJECTIVES

- a. Review of guidelines of limit setting.
  - b. Explanation of natural and logical consequences when limit is exceeded.
6. Practice in setting limits and making rules using guidelines (25 minutes).
- a. From worksheet of "Reasonableness of Expectations Exercise," parent is asked to select situation requiring limit.
  - b. Leader models setting limit.
  - c. Each parent, in turn, verbalizes rule or limit he/she would like to express to child, and appropriate consequence if limit is exceeded.
7. Homework (5 minutes).

Generate five situations from week in which interaction with child called for the expression of a rule or limit. Include: expectations, limit to behavior actually tolerated, verbalized rule or limit, consequence, how it was enforced.

## SESSION V

1. General review of homework (10 minutes).
2. Competency exercise (40 min.).

Each parent in turn describes a situation from his/her homework

The objectives of Session V are to: (1) increase understanding and use of consecutive limit setting, (2) expose parents to the prerequisite consideration for increasing the frequency of occurrence

## ACTIVITY

## OBJECTIVES

- and how he/she responded to it.
3. Discussion of sequence of parental responses leading to modification of child's behavior.
  4. Didactic presentation in which parent is instructed in the following (30 minutes):
    - a. the importance of operationally defining behaviors to be modified.
    - b. observing and recording behaviors.
    - c. surveying reinforcers operating in the environment of the child.
  5. Practice and discussion (35 minutes).
    - a. Operationally define and determine a method of measurement for the modification of representative behaviors.
    - b. Generate lists of reinforcers specific to particular children of the participants.
  6. Homework (5 minutes).
    - a. Parent is asked to choose, define and determine a practical method of measurement for each of two behaviors exhibited by his/her child.

of desirable child behaviors and decreasing the occurrence of less desirable child behaviors.

## ACTIVITY

- b. Parent is asked to survey the reinforcers relevant for his/her own child.

## SESSION VI

1. Homework and competency exercise (60 minutes).
  - a. Each parent, in turn, shares with the group the behaviors chosen to be modified, and method of measurement selected.
  - b. Each parent provides representative examples of the reinforcers chosen for use with his/her child.
  - c. Leaders provides feedback concerning potential problems.
2. Didactic presentation and practice (50 minutes).
  - a. Emphasis on the importance of baseline recording.
  - b. Instruction in baseline recording.
  - c. Practice in graphing baseline data as it relates to the individual needs of the parents.
3. Homework (10 minutes).
  - a. Parent asked to begin baseline recording (and graphing) of at least one of the behaviors selected earlier.

## OBJECTIVES

The objectives of Session VI are to: (1) insure that parent has adequately defined and chosen an appropriate method of measurement for the behaviors to be modified, (2) insure that reinforcers chosen by the parents are practical and realistic, (3) introduce parents to concept of baseline recording, (4) introduce parents to a method for graphing data.

## ACTIVITY

## OBJECTIVES

- b. Parent asked to bring baseline graphs to next meeting.

### SESSION VII

1. Homework and competency exercise (25 minutes).
2. Didactic presentation (40 minutes).  
  
Introduction of general principles of behavior management (consequences, immediacy, and consistency in providing reinforcers).
3. Practice and discussion (35 min. for a. and b.; 20 minutes for c., d., and e.).
  - a. Parent designs intervention program specific to child's behavior he/she wishes to change.
  - b. Leader facilitates by working individually with parents.
  - c. Parent shares intervention program with rest of group.
  - d. Group members facilitate and provide feedback.
  - e. Leader facilitates and moderates.
4. Homework (5 minutes).
  - a. Parent asked to implement program he/she just designed.

The objectives of Session VII are to: (1) straighten out problems encountered during week in regard to baseline recording and graphing, (2) introduce principles of behavior management, (3) instruct in design of program of intervention.

## ACTIVITY

- b. Parent asked to continue day-by-day graphing for presentation at next session.

## OBJECTIVES

### SESSION VIII

1. Homework and competency exercise (85 minutes).
  - a. Each parent, in turn, exhibits and discusses graphic representation of child's behaviors.
  - b. Parents are encouraged to share frustrations and elations occurring during first week of intervention.
  - c. Leader and other members facilitate.
2. Didactic presentation (30 min.)

Instruction in evaluating and changing own programs based on data collected.
3. Homework (5 minutes).
  - a. Parents asked to continue intervention program as well as the day-to-day graphing of child's behavior.
  - b. Parent asked to bring the graphic presentations to final session.

The objectives of Session VIII are to: (1) provide opportunity for discussion of results of first week of intervention, (2) provide opportunity for problem solving with parents whose interventions have provided minimal results.

### SESSION IX

1. Homework and competency exercise (60 minutes).

The objectives of Session IX are to: (1) facilitate parent in re-evaluating and making

## ACTIVITY

- Each parent, in turn, exhibits the graph of child's behavior, and explains graph and problems encountered.
2. Leader attempts to summarize and overview past seven sessions (15 minutes).
  3. Discussion and recommendations (45 minutes).

## OBJECTIVES

necessary changes in behavioral management programs, (2) facilitate an integration of all of the skills and concepts presented during previous weeks.

### Self Management Group

The elimination of self-defeating behavior and the development of self-managing capabilities have been the focus of much discussion in the field of human growth and development. Within the past few years more and more counselors and other mental health workers have been using approaches which encourage the development of self-management skills on the part of their clients. To some extent this radical increase in the utilization of such procedures has been the result of the publication of numerous articles and several informative books (Cudney, 1975; Williams and Long, 1975) which provide counselors with a broad array of strategies for aiding client self-management.

Self-management groups have the twin goals of remediation and development. The remedial goal involves the elimination of some self-limiting behavior or problem. The developmental goal has to do with the development of an approach to life or strategy that enables persons to manage their lives so that they do not reacquire problem behaviors.

The group program chosen to exemplify this approach is entitled "Profile Groups for Weight Control," and was designed by Robert Mandell, Coordinator of Counseling and Health Services at the University of Texas, Dallas. As the title implies, this group is designed to center on one aspect of a person's behavior which can be self-controlled. Although the typical self-management group relies almost exclusively on a behavioral format, Mandell's approach combines behavioral principles and growth group techniques to resolve the problem and establish positive behaviors.

### Group Format

The stated purpose of the group is to provide a structure and an atmosphere which can help people lose excess weight and develop the skill to maintain their desired weight. The ideal number of group participants is ten, with six being the minimum and twelve being the maximum. Inclusion in the group is by self-selection. Each of the ten group sessions lasts approximately 90 minutes, except for the first meeting which focuses on organizational issues and usually lasts about one half-hour.

An overview of group format, exercises used, and objectives sought in each session as suggested by Mandell are presented below.

### PRE-SESSION

<u>ACTIVITY</u>	<u>OBJECTIVES</u>
1. General Introduction and Organizational Meeting. (30 minutes). Designed to: (a) clarify the group purpose and procedures, including fact that initial weight of each group member and weekly progress toward stated goals will be known	The objectives of the first meeting are to: (1) insure a clear understanding of the group goals, responsibilities, and procedures; (2) encourage only those who evidence some degree of seriousness and

## ACTIVITY

## OBJECTIVES

- by all other group members;  
(b) establish a common meeting time and place.
2. Expectation setting by leader:  
(a) each member should be serious and committed to goal; (b) public accountability will exist within the group.

commitment to weight control to join the group.

## SESSION I

1. Use non-threatening group exercises designed to create closer interpersonal relationships such as those found in A Handbook of Structured Experiences for Human Relations Training (Vol. 1-4) by Pfeiffer and Jones. (30 minutes).
2. Restate goals and negotiate group rules (30 minutes).
  - a. Group members and leader share in establishing group rules.
  - b. Typically, rule discussions center on issues of attendance, confidentiality, and weight.
3. Establish baseline weight for each group participant (10 min.).
  - a. Group members are used to post weights on chart.
  - b. Shoes are removed before weight check.
4. Leader initiates discussion on goal setting -- weight loss goal (20 minutes).

Session I objectives are to:  
(1) establish baseline weight and realistic end goal; (2) establish a positive group atmosphere and group cohesiveness so that sharing of actual weight is non-threatening and personal reinforcement value of each group member is increased.

## ACTIVITY

## OBJECTIVES

- b. Each group member's goal should be self-determined.
- c. Group leader monitors goal-setting to encourage establishment of realistic goal.

## SESSION II

1. Group begins with weigh-in and posting of new weight. Calculate weight loss average for entire group. Reinforce those who made progress toward the goal (10 minutes).
2. Leader facilitates a discussion among participants about the type of intragroup incentives for weight control that they wish to build into the process (25 minutes).
3. Leader provides informational assistance on weight control techniques and encourages members to do the same (20 minutes).
  - a. Supply articles and books on dieting and weight control (Ex.: handout on Scary Facts).
  - b. Assign one of the handouts for reading.
  - c. Point out differences in philosophies and techniques for weight control
  - d. Leader may use Dr. Stillman's book, The Doctor's Quick Weight Loss Diet for developing a list of practical hints. Some

The objectives of Session II are to: (1) provide useful hints and ideas so that group members can develop effective self-management strategies; (2) unlock some of the feelings and tensions which people have about their bodies and body image; (3) continue to build up the personal reinforcement value of each group member.

## ACTIVITY

## OBJECTIVES

examples are: (1) Break Up Your Meal. Put aside what you haven't eaten for a snack later or for the next day; (2) Watch Out For Common Rationalizations such as, "I'm already 15 pounds overweight, so I decided what's the difference if I eat just a little more."

- e. Discuss materials and reactions.
4. Either through the use of traditional group counseling methods or sensitivity group exercises begin the process of encouraging people to share feelings about their bodies, self-images, or other life areas (30-40 minutes).

## SESSIONS III - VIII

1. Group begins with weigh-in process as described earlier. Continue to reinforce individual progress and allow the group to encourage and support the less successful members (10 minutes).
2. The group leader initiates a therapeutic sharing of feelings and experiences of the past week with regard to weight control. Once he/she initiates the group process the leader utilizes a client-centered frame of reference, relying on the mutual trust and cohesiveness of the group to stimulate the process of sharing feelings and attitudes about weight loss,

The objectives of Sessions III - VIII are to: (1) reinforce successes in order to support cumulative gains; (2) continue to explore hopes and fears about the body, self, and social interactions that affect weight control; (3) begin to blend from group reinforcement of successes to a focus on self-maintenance skills; (4) continue to foster a healthy group atmosphere to insure that people feel safe in examining sensitive interpersonal and intrapersonal feelings.

## ACTIVITY

## OBJECTIVES

maintenance of new weight levels, and experiences participants have had associated with weight loss and control.

3. Throughout these sessions increasing emphasis is placed on techniques and approaches designed to help a person maintain weight loss. Weekly handouts and discussions provide a wide range of weight control strategies from which to choose (20 minutes).

## SESSION IX

1. Group begins with final weigh-in using established procedures (10 minutes).
2. Group discusses feelings about goal attainment or failure to achieve goal (20 min.).
3. General sharing of feelings and attitudes about leaving group includes a discussion of the procedures that each member has chosen to maintain weight control. Encourage each group member to provide any helpful suggestions he/she can think of to others in the group (50 minutes).
4. Solicit suggestions for improvement of group format (10 min.).

The objectives of the final session are to: (1) help each group member understand the factors leading to goal attainment or lack of it; (2) insure that each member has developed an effective self-management plan; (3) help members summarize and clarify what they have learned about themselves in regard to weight control; (4) insure a smooth termination of the group; (5) obtain feedback for improvement of future groups.

### Summary

This chapter contained detailed descriptions of nine life skills groups that are either comprehensive in scope or have achieved fairly widespread use. Included with the program descriptions were the objectives for each session and the names and locations of the program developers.

The inability to resolve intrapersonal issues such as loneliness, intimacy, sexuality, and the like, can become a tremendously inhibiting factor in human development. Life theme groups are designed to help persons resolve these kinds of problems which are essentially existential or humanistic in nature. This chapter describes six programs structured around themes of interest and concern to many individuals, and includes the name of the developer, the basic format of each group, and the activities within each session.

## Life Theme Groups

Whereas the goal of life skills groups is essentially to enhance interpersonal functioning, life theme groups are designed to deal with vital intrapersonal issues. Seemingly intangible yet strongly felt needs essential to living a satisfying life and to setting and achieving personally meaningful goals are the focus of discussion in life theme groups. In a very global sense, the objectives of these structured groups are to clarify individual values and to help each participant make an active, personal commitment to adopting or adapting a life style that will be consistent with them.

Focus of Life Theme Groups

Specific examples of themes commonly addressed in such groups include sexuality, mortality, sharing oneself, loneliness, selfhood, intimacy, personal values, and the like. As stated in Chapter II, the inability to resolve these issues satisfactorily for oneself can result in the living of an unexamined, purposeless, and unfulfilling life. The most common titles given to life theme groups would be similar to the following: "Intimacy," "Sexuality," "Loneliness and Self-Betrayal," "The Meaning of Death in Life," "Learning to Love," "Sharing and Relationship," "On Being a Man," "Women in Search of Autonomy," "Search for Fulfillment," "Clarifying Personal Values," "Self-Esteem," "Living Together," "Body Image," and "Self Concept."

Life theme groups have some common characteristics, regardless of the specific thematic focus. These common aspects have been explicated in detail earlier, but for the sake of clarity, the four are restated here.

- (1) Each group has a clear purpose generally shared by all group members.
- (2) Life theme groups focus primarily on intrapersonal understanding as opposed to the acquisition of interpersonal skills.
- (3) By helping participants to increase their self-understanding, life theme groups help them become flexibly responsive, rather than rigid or role-dependent.
- (4) The format for each life theme group involves: (a) a series of structured exercises to facilitate the self-inquiry process, (b) techniques for integrating and resolving the particular theme focus, and (c) a pre-determined meeting length or time structure.

Typically, the group leader coordinates the process and sequence throughout, but is less directive and less personally active than is the leader of a life skills group. Also, the temporal features of life theme groups involve less overall time investment, with most groups meeting formally for maximums of eight sessions and fifteen total hours.

As can be seen from their titles, life theme groups, although fairly well-structured, revolve around topics which are frequently

existential or humanistic in nature. While careful pre-selection of participants is characteristic of most life skills groups, such screening is not so crucial to the success of a life theme group. However, it is important to acquaint participants with the distinction between group therapy and the structured life theme group experience in which they are about to participate. A final point of note may be somewhat obvious: while many participants achieve major gains toward a satisfactory resolution of the focal issue, others find that the group experience represents merely the beginning of the crucial process of examining and valuing their particular position vis-a-vis the theme.

### Description of Life Theme Groups

The latter part of this chapter describes a number of life theme groups, chosen for inclusion because of their relative completeness, variety of focus, and developmental aspect. The descriptions are in narrative form in contrast with the outline style used for the more highly structured life skills groups.

### Clarifying Personal Values

A basic human need for effective functioning is the clarification of personal values so that one can pursue a lifestyle in concert with them. A model for resolution of this critical theme is that used by Judy Marsh, formerly of the Office of Residential Life at New England College. Her description of the workshop follows.

### Group Format

Most of the decisions we make in life are based on how and why we

value things. Yet, so often one hears people say, "I do not know why I do this," or, "I wonder why I always do that." The answer is probably linked to something they value -- some need that is being met by that action.

Values Clarification sessions can be useful for people of all ages and in all career positions. The number of people in a workshop is up to you as a facilitator, according to what size group you prefer. I have worked with anywhere from 20 to 150 people in various workshops. Each session is designed to run from 45 to 90 minutes.

A primary goal is to have people get in touch with their own personal values. It is important to share the seven criteria for a full value at the beginning of the first session (Raths, Harmin, and Simon, 1966). A full value meets the following seven criteria:

- (1) chosen freely
- (2) chosen from among alternatives
- (3) chosen after due reflection
- (4) prized and cherished
- (5) publicly affirmed
- (6) acted upon
- (7) part of a pattern that is a repeated action.

As you share the value criteria, choose a full value from your own life. Tell how you chose it, how you considered the alternatives, the time you spent reflecting on it, and so on, down the criteria list.

As facilitator, it is also important that you model what you ask others to do, particularly in the initial exercise. I use an extra large piece

of newsprint or overhead projector and do each step as a model for them to see as they write on their own. This serves several purposes: it answers many of the directional questions; it gives you a better sense of timing for each phase; and it shows the group that you are working on your own values, and are willing to affirm them publicly.

The following six sessions have been drawn from several sources and together provide a total design which I find quite useful in assisting people to clarify their personal values.

#### SESSION I: Name tags (60-90 minutes)

This exercise is an easy way to help any new group relax and get acquainted. It also starts individuals on the road to identifying what they value in their own lives, and to affirming those values in a group. You'll need a sufficient number of 5x8 unlined file cards, pens, and safety pins.

Hand out the cards and have participants write their names or the name they would like to be called in the center of the card. Ask them to write the numbers 1 to 3 toward the upper right hand corner of the card, and then proceed with the following instructions. Title this section "Favorites." Next to number 1, list your favorite song; for number 2, list your favorite way to spend Saturday night; and for number 3, list your favorite food.

Then, move to the bottom right hand corner and number 1 to 3 again. Title this section "Places." For number 1, name what you feel was

the warmest, most comfortable room in your house when you were age seven. Two, list what you feel is the warmest, most comfortable room in your present living space. Finally, for number 3, note your favorite vacation place.

Now move to the bottom left hand corner and number 1 to 3 again. This corner will be your "People" corner. For number 1, name the three most nourishing people in your life. These would be three people you like to be around most, and who really make you feel good about yourself. Number 2, indicate who is the most toxic person in your life. "Toxic" as used here means that the person you have identified is a drag to be around, does not appreciate you for who you are or what you do, and probably makes you feel not good about yourself. For number 3, write the name of the person in your life from whom you need more validation. This might be a person you see everyday or someone who is far away -- but you need to hear from this person that you are "OK," and positive viewing of you by this person is important to you.

The last section in the upper left hand corner is the "Me" section, the place for things about you. Again, write the number 1 to 3. Next to number 1, list three qualities you like about yourself. By number 2, put down one thing new you have done to make your life better this past year. It might be something you changed, like wearing seat belts or stopping smoking, but it should have had an influence that to you has improved your life. For number 3, write down one thing you could do to enrich your life more in the next six months.

After all participants have finished their cards, they pin them on themselves. For a few minutes they walk around silently and read each others' name tags. Then they form groups of three, sit down, and take turns sharing one item on their card -- the item of their choice. They have two minutes each to do so. Then they have three minutes each to share one of the areas in the "People" section.

For the last part, participants have two minutes each to share the three qualities about themselves that they like best. People continue to wear their name tags throughout the day since they serve as good conversation starters and they enable everyone to relate to one another by name.

#### SESSION III 20 Loves (45 minutes)

This session is designed to put individuals in touch with the activities that nourish, energize and relax them. It requires that each participant have a piece of paper and pencil or pen.

Instructions: Take a sheet of paper and number down the center

from 1 to 20. To the right of the numbers, draw vertical lines that divide that half into seven columns. Now think of the things in your life you like to do most and list them on the left side of the numbers. These may be big or small things. The most important criterion is that you enjoy doing them.

1. Now in the first column put an "A" next to those things you like to do alone. Put an "O" next to those things you like to

- do with others. Put an "A-O" next to those things you like to do alone as well as with others.
2. In the second column put a dollar sign "\$" for activities that cost you \$5:00 or more every time you do them.
  3. In column three draw a heart next to those activities you need or want to do with someone you love.
  4. In column four put "52" next to those activities you would like to do once each week for the rest of your life.
  5. In column five put an "E" next to all the activities that involve exercise.
  6. In column six put "80" next to the activities you still will be able to do if you live to be eighty and are in good health.
  7. In column seven jot down the approximate date you last did each of these activities.

It is helpful here to have prepared a large sample sheet to give the participants a visual picture of how their sheet should appear.

Now divide into groups of four and complete the following sentences about their findings from this exercise:

- What I learned was . . . . .
- What I relearned was . . . . .
- What I was surprised to see was . . . . .
- What I need to do is . . . . .

Give each group eight to ten minutes to do their group sharing.

Then, ask if people would share their findings with the group as you call on them.

This session is modified from Simon (1974).

### SESSION III: The Pie of Life (45-60 minutes)

All of us have at one time or another said, thought, or heard from others the phrase, "I don't know where my time goes!" This session helps people to realize where their time is going and how they are expending their energies. Each person will need a sheet of paper and a pencil or pen.

The facilitator begins by drawing a large circle on the board or on newsprint. Then the group is told that this circle represents a typical day in their life. Divide the circle into quarters with dotted lines. Each quarter represents six hours. Now participants estimate how many hours or parts of an hour they spend on each of the following areas in a typical day:

1. Sleep
2. In classes (if group includes students)
3. At work (a job that earns money)
4. With friends, socializing, playing sports, etc.
5. On homework or preparations for classes (again, if students present)
6. Alone, reading, listening to stereo, watching television
7. On chores, laundry, housework, etc.
8. With family, including meal times
9. On miscellaneous other pastimes.

Participants draw with solid lines a slice within their circle for each of the nine areas and label each slice. When everyone is finished, each person finds a partner. They ask themselves the following questions and share with their partners the answers to them:

1. Are you satisfied with the sizes of each area slice?
2. Ideally, how big would you want each slice to be? Draw your ideal pie.
3. Realistically, is there anything you can do to begin to change the size of some of your slices?

To start, have the whole group cluster at zero. Tell them you will read a value statement twice and then they should move to the specific location that best represents their feelings. Ask them to be aware of how they move, and how others move in response to their value posture on each statement. You may repeat the sentence if asked, but be sure that you do not modify the wording of the statements. Here are some sample value statements:

1. Children under 10 are responsible enough to make decisions.
2. Pre-marital sex is okay.
3. People learn violence from spanking.
4. The father should have the final say-so in family decisions.
5. Women are more effective dealing with young children than men.
6. Children should be able to make up their own minds about attending church.
7. Grades children earn in school are entirely their own business.
8. Alcohol is a more dangerous drug than marijuana.
9. Masturbation is healthy and natural.
10. Pornographic materials should be kept out of the schools.
11. It is inappropriate for professional men to wear long hair.
12. A complete sex education course, including sexual methods, should be taught to teenagers in the schools.
13. Birth control pills and devices should be dispensed through the schools.
14. Formal education is the key success in life.
15. People with strong, formal religious beliefs are most effective when dealing with young people.
16. Men who cry are weaker than men who don't.
17. I support the principles of the Women's Liberation Movement.
18. Divorce laws should be stricter.
19. I support Capital Punishment for rapists.
20. Parents should be encouraged to stay together for the sake of the children.
21. There should be stricter abortion laws.

Now ask the group to find four or five individuals with whom they frequently shared similar positions during the exercise. After they have formed their group, repeat five of your value statements again. Have

each group choose one statement for themselves. Then have them respond to the following questions surrounding that value statement:

1. How do you hold these values?
2. What is the source or origin of these values?
3. How do you act on these values?
4. What validating experiences have you had which affirm these values for you?

This session has been adapted from a Parent Effectiveness Training (P.E.T.) course (Gordon, 1974), as taught by Bert Cohen.

SESSION V: What Would You Like to Say to the World? (35-40 minutes)

The purpose of this session is to focus on one important value and determine how one feels about it. Materials needed include a large pad of paper (18 x 24), crayons or colored markers, and tape.

Instructions: Each of you has been given a large piece of paper that is to represent a free billboard your town council has just given to you. It is located on the main street or highway of your town or city. You are to use that billboard to display any message you want to give to others. Compose that message in any way you see fit, in response to the question, "What would I like to say to the world?"

After all have finished their billboards, each member tapes his/hers up around the room. Then, volunteers identify their billboards and share their meanings and why they chose them. Not all billboards need to be described, but sufficient time should be allowed to have several different ones explained.

SESSION VI: Personal Medallion (45-60 minutes)

The objective for this session is to have individuals think about the direction and quality of their own lives. For this exercise, each person needs paper and a pen or marker of some type.

Begin by having participants draw a circle about nine inches in diameter on their sheet of newsprint. In the center of that circle they draw another circle about four inches in diameter. Next, they draw a line from the outer circle to the inner circle at approximately the 1:30, 4:30, 7:30 and 10:30 positions on the outer circle, as if it were the face of a clock (see below).

In the first section at the top of the "medallion" they symbolize what they would do if given a whole year to do anything they wanted with unlimited funds and guaranteed success. Going clockwise, in the next section they symbolize what in their lifetime they consider to have been their greatest personal achievement. In the bottom section, they symbolize three things they do to re-energize and relax. In the last section they symbolize one thing other people can do to make them happy. Finally, in the center circle, they symbolize three qualities they would like others to remember about them. All of these symbols preferably should be graphic, although they may be verbal if no visual symbol is

feasible. When participants are finished, they divide into groups of three. In these groups individuals take turns explaining their medallions and the meaning of each symbol. This is the final session of the workshop, and it provides a personal summarizing activity which draws together the elements addressed in the previous five meetings.

Some additional factors I find to be very important for a successful workshop. The facilitator should avoid killer statements such as, "That is dumb," or, "You what!" and should value or honor statements made by participants. If people open themselves up to share their values and then find that they are "put down," it may be a long time before they are willing to share again.

The setting should be comfortable and roomy. For some groups this may mean chairs -- for others, a floor with pillows. Participants should have enough room so that when they break into small groups they are far enough apart not to be disturbed by others. Good ventilation in the room is also essential.

It is important, too, that the facilitator talk about full attention early in the sessions. If a person is talking to the whole group or in a small group, the group members should focus their full attention on that person by maintaining eye contact and allowing the person to speak uninterrupted. Many times, sharing values or experiences from one's life triggers ideas, thoughts, and reactions within others that they want to share immediately by saying things such as, "I know what you mean,"

or, "Something like that happened to me." However, interrupting cuts off the speaker with the result that she/he feels that his/his particular thought is not valued. By giving full attention to a person, we tell them, "You are worth listening to," and, "I want to hear you."

Formal evaluation for this type of group is difficult because outcomes cannot be measured readily. Value clarification is a process -- hopefully, a life-long process. The style of evaluation I use is to ask each participant to write his/her responses to the following stimulus items. This is done at the end of the last meeting.

- I learned . . . . .
- I relearned . . . . .
- It surprised me to see that I . . . . .
- I see that I need to . . . . .
- What was the highlight of the session or sessions for you? . . . . .
- What was least useful to you? . . . . .
- What feedback do you have to give to the facilitator? . . . . .

Human Sexuality

The importance of human sexuality in the scheme of developmental needs requires no documentation. An exemplary structured group aimed at assisting individuals to come to terms with the implications and expression of sexuality in their lives is the following program provided by Bill Jones of the Office of Counseling Services at Gettysburg College.

Group Format

While there are many ways of gathering and disseminating information about sexuality, several factors argue for the use of a small

structured group approach. Of primary importance is the belief that sexual facts do not exist without accompanying attitudes or emotions which may alter the ways those facts are perceived. In addition, since human sexuality is such a highly emotional subject, any approach to examining it should deal with the realities of human relationships, life style, self-image and value structure. A small group approach can offer experiences which foster insight into oneself and the effect one has on others, aid personal unfreezing, provide a more feeling-level orientation, and thus increase the feeling of freedom to share material of a sensitive nature.

In approaching the exercises that follow, the leader should encourage and exemplify critical self-examination and an awareness of fluctuating values. He/she should make it clear that responses from individuals are expected to be varied and that all are acceptable, since "what is" and "what ought to be" are debatable.

The exercises are designed for use in a group of 10 to 12 persons, half males and half females. The group meets weekly for an hour and a half for each of eight sessions. A room suitable for maximum interpersonal interaction and large enough for breaking up into smaller sub-groups is suggested.

The general objectives of this program are as follows:

- (1) to develop awareness of sexual attitudes and behavior in ourselves and in our culture;
- (2) to foster freedom to confront honestly, to examine and discuss

sexual issues;

- (3) to provide understanding of factors that inhibit the healthy experiencing of our sexuality;
- (4) to increase factual information on normal sexual functioning;
- (5) to develop positive affirmation of one's sexuality.

## SESSION I

### 1. Introduction and Community Building (30 minutes)

The objectives of this activity are to provide an introduction to the topic and general clarification about expectations, and to provide through use of the "log" an opportunity for the participant to interrelate ideas and experiences which are significant and relevant to the group's objectives. It also gives the leader an opportunity to note the participant's reactions and progress. For both the participant and the leader it can provide indications of growth and change.

A. Explain purposes and format for the sessions that will follow, emphasizing that sexuality encompasses the total personality and is not limited to genitality. Explain the importance of group members' attendance at all sessions, if possible, because of the shared experiential concept of group process.

B. Present background reading material (Katchadourian and Lunde, 1972).

C. Explain the use of the "log." Note: The "log" should be a series

of entries (to be turned in bi-weekly) describing the participant's intellectual response to what he/she has seen, read and heard. Also to be included is what he/she does and feels that is pertinent to the topic of sexuality. There is no required writing style, and entries may vary from one time to the next. They may be subjective, poetic, intellectually critical or scientific.

D. Answer questions.

## 2. Getting Acquainted (Remainder of Session)

The purpose here is to establish group cohesiveness through the sharing of personal data with others, to allow each person to experience taking responsibility for sharing with the group, and to begin the practice of self-disclosure at a relatively safe level. Each participant will need a pencil and paper.

A. Instruct the participants to write a very brief response to the following questions: (1) Besides yourself, who is the most important person in your life right now? (2) Where and from whom did you get your first sex education? (3) Describe a gift someone gave you. (4) What do you hope to gain from being in this group?

B. Instruct the participants to break into sub-groups of four or five (depending on numbers). Ask each to share his/her name and responses to the four questions with the sub-group members, with each person sharing the response to question number one before moving on to question number two and so on.

C. Instruct the sub-groups to form one large group. Each individual is to select one other person from his/her sub-group and introduce that individual by telling his/her name and something learned about the person while in the sub-group. Continue this process until all have been introduced.

## SESSION II

### 1. Sharing A First Sexual Experience (45 minutes)

The intent of this session is to identify and share common personal feelings and experiences in early childhood, to practice the skill of self-disclosure in a group, and to identify present attitudes about sexual experiences.

Give each participant a straight pin, a pencil and a 3 x 5 index card. Instruct the individuals to think about a first "wet dream" or "playing doctor." Ask them to write briefly about the experience on the card and then to pin the card on their chests. Participants should then quietly mill around about the room and read what the others have written, responding non-verbally.

Instruct the participants to gather into groups of five or six and share verbally: (a) what I wrote on my card, (b) how I feel about it now, (c) how I reacted to what other people wrote.

### 2. Body Image (45 minutes)

The aim of the following activity is to encourage the sharing of personal feelings and concerns about the human body, to increase

awareness of how society influences attitudes about our bodies, and to encourage giving affirming responses to other persons.

Each group member is given an opportunity to share feelings about his/her body.

A. Going around the circle, one person at a time is asked to stand and share: how I feel about various parts of my body -- hair, chest, face, etc., both positive and negative feelings. An alternative would be to have participants share a feeling about "the part of my body that I like the least."

B. If the feelings are negative, the leader asks where the negative feelings come from ("Who says so?" "Where did you learn that small breasts were bad?" etc.).

C. The group is instructed to give positive (truthful) feedback to each individual (i. e. "I never really noticed your hips," "You have such a warm face," etc.).

### SESSION III

#### The "Dirty Words" Game (Full 90 minutes)

The idea behind this exercise is to lower group inhibitions and heighten group openness in sharing words (to desensitize). Also, this activity can serve to make it easier to talk about sex in a mixed group by legitimizing various language forms, and to build group spirit through use of a team game. Finally, it can enable group members to talk about their feelings in explicit terms.

A. Introduction: "Sexuality as a subject has spawned many language forms. Often in our culture we find it embarrassing or uncomfortable to use various kinds of words to describe parts of the body or various kinds of sexual activity. For example, we often describe our sexual appendages as 'things' or 'it.' As children we may have called our penis or vagina by a variety of 'family' terms. We are not always familiar or comfortable with scientific terms like 'coitus,' for example. Often our language is vague with imprecise terms like 'doing it' or 'making out.' In addition, our culture is filled with vernacular or so-called 'dirty words' such as fuck, cock, pussy, etc.; which are often (but not always) used demeaningly."

B. Form two groups of five or six persons. You may wish to give them team names.

C. Each group is told that the members are to respond to several sexual terms by coming up with as many synonyms for that word as possible. One person in each group is to be selected as recorder to write down the words as they are spoken. Any term that is synonymous with the key word is appropriate. The team with the most words when time is called is the "winner." First word is "intercourse."

(An alternative: Place a large piece of blank paper on the wall and as each individual comes up with a synonym, he/she stands up, states the word loudly enough for everyone to hear, and writes it on the paper with a magic marker. The result is often a hilarious race to list the most terms.)

D. After several minutes, the leader calls time and asks each recorder to count the team's words. The team with the most words reads off its list of synonyms for "intercourse." The losing group is asked to share the words on its list not mentioned by the winning group.

E. Give the next word, "penis," and repeat Step D. Other key words may be "vagina," "homosexual," or "masturbation."

F. Ask the entire group to process the exercise by asking: (1) What were your feelings during this exercise? (2) Was it difficult to say certain words? (3) How did you feel about the presence of the opposite sex? (4) Did you notice any particular patterns in the way you felt about some words?

G. The leader may wish to point out some factors that make a "dirty word" dirty, building on the notion that these are limiting, often self-deceiving forms of expression that reveal insecurity rather than mere unconventionality. Reasons behind the employment of these co-called "dirty words" include the attempt to gain a psychological advantage over another by shocking, insulting, frightening, fascinating or in some way "overpowering" the listener emotionally. Also, conforming to convention, seeking emotional release and reassurance, and not knowing other, more proper or anatomically descriptive terms motivate some people to use "dirty words" extensively.

#### SESSION IV

#### Sharing of Childhood Memories (Full 90 minutes)

The objectives of this session are to identify and express to others

some personal experiences and feelings related to sexuality, to increase awareness of how personal attitudes about sexuality develop, to discover the universality of most sexual feelings and experiences, to practice the skill of self-disclosure within a small group, and to identify how one's present attitudes and feelings toward sex are related to prior experience. This exercise is also described in Morrison and Price (1974).

A. Have available newsprint on which to write cues for discussion. Instruct participants to form mixed sex trios, and if possible not to group with close friends or partners from earlier discussion groups. Have each trio find a private space and give them the option of not sharing, but suggest that they may want to make mental note of the feelings that may come to mind so that they can be dealt with later, privately.

B. The following comments will serve to introduce the exercise: "In learning about human sexuality, the biological aspects of sex and reproduction are certainly important. But equally significant are the affective aspects -- the attitudes, feelings, taboos which we privately have about sexuality. These are learned mostly from our families and also from the street -- from our peers as we are growing up. Today we are going to share some of these experiences and memories. You may have difficulty recalling experiences in a particular area; you may have blocked out experiences and feelings, perhaps because you learned they were bad or dirty. You may also find that someone else's sharing triggers a flood of memories you had forgotten about. You may also discover that there are some experiences which you prefer not to share with your group. Share

only what you wish to share. You may want to let your partners know you are reticent about speaking, even though you have decided to share. You may want to note those actions or statements which make you feel ill at ease in your group."

C. In this section, it is wise to move quickly through the first three topics and increase the time allotment as the exercise develops. Before sharing, advise the participants first to take a few minutes for reflection.

1. "What feelings do you recall about being a girl or being a boy and how did you feel toward children of the opposite sex (envy, disdain)? Did your parents expect different things of you than they expected of your sisters (brothers)? If so, how did you feel about that?" (five minute pause)

2. "What were your family patterns in regard to: talk about sex, nudity, physical expression of affection?" (seven minute pause)

3. "What memories do you have of sex play as a child? If your parents were aware of it, what did they say or do? What were your feelings about sex play?" (Continue to increase time on these subjects, allowing a few minutes for reflection before each one.)

4. "When did you first become aware of your parents' sexuality? How? What feelings did you have?"

5. "What memories do you have of approaching adolescence, menstruation, wet dreams, awareness of sexual feelings, body development (or lack of it)? What were your feelings at the time?"

6. "What are your memories of the first time you were kissed or touched by a member of the opposite sex? What do you recall about your first love? Your first serious sexual involvement?"

7. "What was your most pleasurable or memorable sexual experience? This experience may be alone, relating to your sense of yourself as a man or woman; or it may be with another (not necessarily a genital experience)."

8. "In what ways is your 'personal history' related to your present feelings about your own sexuality?"

### SESSION V

#### True-False Sexuality Quiz (Full 90 minutes)

The purpose here is to increase factual information about normal sexual functioning and dispel many of the myths surrounding human sexuality; to help group members be aware of their own level of sexual knowledge, and to share more completely factual sexual information.

A. Hand out true-false sexuality quiz. Ask students to form dyads and decide, as teams, which answers are true or false.

B. Ask the group to form a circle with "teams" sitting together.

C. Go through the list of statements by going around the circle and having each team state their response. Ask for general group agreement or disagreement on response. If the response is incorrect, the leader shares the correct response. Many statements will initiate more elaborate discussion, and this should be encouraged. The following are ten exemplars from a set of sixty true-false items constructed for this exercise. A good source of material for such items and answers to them is McCary (1971).

1. Women ejaculate as men do.
2. Simultaneous orgasms are more satisfactory than those experienced

separately and are, moreover, necessary for sexual compatibility in marriage.

3. Women are capable of multiple orgasms.
4. It is dangerous to have sexual intercourse during menstruation.
5. Sexual dysfunction is much more frequently a matter of psychological factors than of physiological disturbance.
6. Alcohol is a sexual stimulant.
7. Sex desire and ability decrease markedly after the age of 40 to 50.
8. There is no absolutely "safe" period for sexual intercourse insofar as conception is concerned.
9. The birth-control pill will eventually cause a wide variety of ills in any woman using it for any length of time.
10. Masturbation is known to cause many physical and psychological problems.

#### SESSION VI

Sex Roles: The Ideal Man -- The Ideal Woman (Full 90 minutes)

This activity is designed to assist participants to learn what roles members of the opposite sex ascribe to one another, to dispel some of the culturally preconceived notions about how males and females feel about one another, to assist participants to share personal feelings about one's sex role in a mixed group, and to help them be more empathic and make fewer generalizations about the opposite sex.

Divide participants into all male and all female groups and give each group a meeting place, magic marker and poster paper.

1. Each group brainstorms and writes down the qualities of the ideal man (for women) or the ideal woman (for men). (15 minutes)

2. Each group is asked to imagine what the group of the opposite sex might list. Women are asked to list what men think is the ideal woman; men are asked to list what women think is the ideal man. (15 minutes)

3. Each group is asked to list the desired attributes of their own sex: for men, the ideal man; for women, the ideal female. (15 minutes)

B. Everyone reconvenes. Each group's lists are posted on the wall, and a spokesperson explains the terms. The groups begin with number 1 until all groups have reported. Then they move to number 2, etc. (45 minutes)

C. Some variation on the above may be desirable. In the first option participants break up into two groups (mixed gender). One group sits in a small circle and the other in a larger circle around the smaller group. The inside group has a general reaction session sharing feelings, attitudes, beliefs, etc., for about 20 minutes. The outside group observes and remains silent. After time is up, the groups switch positions. After another 20 minutes, both groups discuss the entire exercise.

Option 2. Women and men break into separate groups and role play a dorm or floor meeting where they assume the roles of the opposite sex. The men (playing women) may wish to discuss the social situation (from a woman's point of view) and vice versa.

## SESSION VII

### Reactions to Films (Full 90 minutes)

This session's objectives are to increase individual awareness of sexual attitudes, to share individual interpretations of abstract concepts and explore feeling content of these interpretations, to express feelings about symbolic representations of sexual themes, and to discover the varieties of attitudes toward sexual themes in a given group.

A. Divide the group into two sub-groups prior to viewing the films. (Suggested films: "Orange," "A Quickie," "Unfolding," all available from Multi Media Resource Center, 540 Powell Street, San Francisco, California 94018.)

B. Immediately after viewing the films, hand each individual paper and writing materials. Instruct the participants to complete the following sentence for each film: "This film made me feel that sex is like . . ."

Participants should use their imaginations freely as they consider the feelings generated by the films. An example of such a response might be: "This film made me feel that sex is like a roller coaster ride -- fast and furious."

C. When all participants have completed their sentences for each film, ask each one to fold his/her paper and put it in the center of the circle. Then each is asked to draw out as many pieces of paper as there were films.

D. Each person reads the first sentence he or she has drawn from the common pile, and attempts to share what he/she thinks the writer was

trying to express. The writer then identifies her/himself and shares what she/he was really trying to express and what aspects of the film stimulated those comments.

E. Follow the same procedure for all of the sentence completions.

## SESSION VIII

### Sharing of Final Log Entry (Full 90 minutes)

The purposes of this session include giving the participants an opportunity to share their growth and learnings with other group members, enabling each group member to give feedback to the leader about his or her experience, enabling group members to express how in-group learnings have affected their outside experiences, and discovering to what extent the goals of the program have been met.

Participants are asked to bring their final "log" entry (see Session I) and share its contents with the entire group. This "log" entry should provide an overview and final reaction to the series of group sessions.

### Loneliness and Self-Betrayal

One typical intrapersonal theme which has become the focus of structured developmental group efforts is loneliness. The next few pages describe a workshop entitled "Loneliness and Self-Betrayal." This program is the creation of Victor Atyas of the University of Rhode Island Counseling Center. Following are the elements of this program as described by Atyas.

### Group Format

For most people, and often students at the college level, an issue of great relevance is that of loneliness. I am not talking of loneliness caused by geographical isolation, but of loneliness brought about by self-abuse, a sexist orientation to life, social role playing, or other abortive ways of finding meaning for oneself. Because feeling lonely is both painful and often humiliating, those so afflicted are under great pressure to seek escape, an escape they usually find by becoming more vigorously engaged in behavior which leads to self-fragmentation. Loneliness leads to self-betrayal, and self-betrayal to great loneliness. Indiscriminate relationships can only increase one's state of alienation and feeling of ultimate futility.

Participation in a workshop on loneliness and self-betrayal should give individuals an opportunity to become exposed to honest and genuine interpersonal relating, to become aware of their tendency to compromise their integrity, and to discover more authentic ways of being themselves.

The design proposed here is flexible. It can be applied to groups consisting of as few as four participants, or up to ten times that many. Of course, the larger the number, the larger the physical facilities that will be required. The time allocated for the total workshop can involve a half day, a full day, or two days, depending on the needs of the participants. My own preference is for four hours. There are no

particular criteria for selecting potential members. As this workshop is typically offered to a college population, the assumption may be made that intellectual levels and age will not vary widely. It is preferable to have approximately equal numbers of men and women so that as eventual subgroups are formed there will be an opportunity to deal with self-betrayal which results from the consequences of narrowly conceptualized roles of being a male or a female. The only individuals not suited to involvement in such an experience are those who are clearly emotionally handicapped, and who are in need of active psychological or psychiatric care.

A good way to publicize the workshop is by placing an ad in the college newspaper, mailing a flyer to the various academic departments, and hanging posters in the Student Union and in residence halls. Those wishing to participate are asked to sign up, and a list of names and telephone numbers is kept in the case of cancellation, where numbers exceed available space.

The workshop should begin only when all participants have arrived and the doors can be closed. A most essential factor for the success of the workshop is the mood created by the leader. She/he will want to convey the seriousness of the enterprise, without being stuffy or overly intellectual about it. Typically, I will ask for silence and try to make eye contact with most of the participants before addressing myself to the tasks ahead. I welcome them, introduce myself to them, and then ask them to look around for a place to which they feel they can retreat that will give them the feeling that they "belong" there. They then move to the chosen place. I invite

them to make themselves comfortable, but not to engage anyone in conversation. Such a procedure usually leads to a mood for introspection and reflection.

When the participants have found places in the room where they are relatively undistracted and can become absorbed in themselves, the leader should give four 5x7 index cards and a pencil to each person. She/he then asks that the participants give their attention to their immediate emotional state, reflecting on how they feel about being in that place, and on their expectations. They have five minutes to get in touch with themselves, at the end of which they note their introspective feelings on Card #1.

After two minutes or so, it is a good idea for the leader to stress the fact that in a workshop like this one it is especially important to be honest about oneself. Participants might be gently encouraged to self-disclosure by being reminded that they will get as much out of the experience as they put into it.

Following this, the leader invites them to go back into themselves, and to reflect for another five minutes on what loneliness means to them. She/he tells them not to intellectualize, but to seek "in their guts" for a personally meaningful definition. Because most people are not accustomed to such introspection, it might be helpful to say (after a few minutes have passed), "If thinking of what loneliness means to you is difficult, concentrate on a specific time in your life when you felt painfully lonely and try to recall how your mind and body felt." If even this approach to getting in touch with their loneliness is not for participants, the leader might suggest that they think of themselves as movie directors

attempting to portray a scene depicting a lonely man or woman. At the end of five minutes, the leader should ask them to describe on Card #2 whatever discovery they have made within themselves as to what loneliness is like for them, or to depict graphically what a lonely state is like.

When they have finished this task, the leader instructs them to go back into themselves still a third time, and to think for five minutes or so of an actual time when they felt oppressed by loneliness, and this time to focus on what they did to cope with this feeling. A few minutes later, she/he may invite them to reflect on whether they have any typical, consistent ways of acting to reduce loneliness. At the end of five minutes, participants write on Card #3 what they usually tend to do when feeling lonely.

When they have finished writing their thoughts, the leader asks them to go back into themselves a fourth time, and think of an instance when they felt very lonely but were able to engage in a behavior which eventually resulted in a feeling of some fullness and well-being for themselves, a strategy which seemed to work to help abate the loneliness. Two minutes later or so, the leader might want to emphasize the fact that this time they are being asked to think of a way they coped with loneliness which led to a feeling of pride or positive regard for themselves. When the allotted time has passed, she/he asks them to describe on Card #4 the result of this introspection. This concludes the introductory phase of the workshop.

The next phase is directed at processing the material with other people. The leader invites the participants to look around the room, and to begin the process of getting acquainted. She/he encourages them to walk around and make contact, but not to discuss what they have written on their cards. Naturally, the length of this exercise will depend on the total length of the workshop. Usually, 5 to 10 minutes are enough for the participants to get a feeling for the people with whom they would like to interact. They should be encouraged to move along and not to spend all their time with any one person. When it seems that they have loosened up, a suggestion should be made that they now select one particular person with whom they would like to spend some time. After pairs are formed, the leader asks that three couples merge with each other so that there will be subgroups of six people each. There is room for some flexibility here. Some leaders may prefer to have smaller, more intimate groups consisting of as few as four members, and other leaders may prefer groups of eight or even more. The less total time the participants will have to spend together, the more beneficial the smaller groups will be.

When the subgroups are formed, the leader instructs the subgroups to find relatively secluded spots, or separate rooms if available, so that they will not disturb each other. After they have settled themselves, the members of each subgroup are invited to take turns reading Card #1, then, when finished, Card #2, then Card #3, and finally Card #4. It is important that the leader remind individuals to respond actively and openly to each other as they take turns sharing the material on the cards. She/he emphasizes that the more candid the feedback process is, the more meaningful

their involvement will be, and the greater the opportunities will be for personal growth.

She/he will want to add that the leader's function, for the remainder of the workshop, will be to visit the individual subgroups and to become a resource person to them.

After the subgroups have begun to interact, the leader does just that -- goes from group to group and facilitates the group process. She/he stays as long as her/his services seem to be needed, attempting always to facilitate the interaction with her/his presence, and not to hamper it. I have often observed that some groups very quickly develop a momentum of their own, and have had no contribution to make to them. On the other hand, there have been instances where I have had to participate actively before group members could get on with their work. Depending on the needs, the group leader may ask provocative questions, share his/her own experiences, comment on the prevailing moods of the group, or empathically relate to individual members.

This phase of the workshop can last anywhere from three hours to a day-and-a-half, or even more. There is actually no limit to how long the group interaction can proceed, for, after all the cards have been read, the opportunity for a spontaneous interaction among members of a group is limitless. New issues may be raised and discussed at will. It is important, though, that in all groups time be allowed for the processing of their experience. At the end of this phase of the workshop, the leader invites all the participants to join him/her in a total group discussion. In

the large group, it is desirable to continue the processing of interactions, because (inevitably) there will be individuals who will not have been able to reach a sense of closure during their participation in the small groups. They should be encouraged to articulate their feelings and reactions at this time so as to complete the integration of their experience. The large group experience will also help the leader to gauge the success of the workshop, and to make possible plans for a follow-up.

Loneliness is the fate of human beings who have lost their autonomy, and who cannot differentiate between behavior which is conducive to personal growth and behavior which leads to self-degradation. Escape is the dominant mode of adjustment. In the course of the workshop, it is hoped that the members will have taken advantage of the opportunity to transcend their loneliness, at least temporarily, through meaningful involvement. They should have attained greater self-awareness as to the causes and consequences of loneliness, and have become more aware of the vicious cycle between loneliness and self-betrayal. Finally, if they have gone deeply enough into themselves, they should have experienced the awakening of a new value system, one which places greater worth on solitude with integrity than on avoidance of loneliness through self-betrayal.

The key variable to the success of this kind of workshop seems to be the type of mood which permeates it, and the leader has the most responsibility for establishing this mood. It appears to be essential for positive workshop outcomes that the leader be able to create an atmosphere

conducive to introspection, personal honesty, and willingness to risk self-exposure. She/he has to be involved in the interactions, and has to convey an uncompromising sense of integrity. Should s/he in any way convey an attitude of indifference, or a need for self-aggrandizement, of having to be in control, or of desiring to be entertained, the experience will end in failure. Benefits can be derived both from a short-term

workshop and from one of longer duration. The major value of a half-day workshop is the opportunity it provides for learning experientially that loneliness is something shared by many, and that it can be transcended by relating honestly with people who are, themselves, willing to be honest. The full day or longer workshop, while making it possible to have a fulfilling interpersonal encounter, also presents a unique opportunity for a deeper examination of the vulnerability which often leads to self-betrayal, and of ways of coping with loneliness which assure one's self-respect and personal wholeness.

#### Raising the Male Consciousness

A theme group designed to assist men to explore themselves in light of their "maleness" is the following program. The male CR (Consciousness Raising) group is the work of Richard C. Nelson and Allen E. Segrist, both of the Counseling and Personnel Services Department at Purdue University.

#### Group Format

This group program is intended for males who are interested in gaining greater understanding of themselves, the effects of being born

male, and ways of relating comfortably and openly with others in light of their maleness. Membership is restricted to men only, with one facilitator for every eight participants. An ideal setting for the sessions is a carpeted, informal area with flexible seating arrangements, large enough to accommodate the total number enrolled. The group can be organized for an extended session of twelve hours, for a full weekend, or in weekly three-hour sessions spread over as long as three months.

The units for this structured group format are "stages" which may be explored, as noted earlier, in one intensive workshop or in several meetings over an extended time period. We do not believe that a series of miscellaneous activities will necessarily produce an effective male consciousness group; on the other hand, an effective group can utilize activities which then produce personally relevant dialog. The group benefits from the processing which follows the active experiencing of self and others. The stages which provide for this active experiencing comprise a developmental learning sequence which is generally applicable to all participants; specific activities can be modified and applied to meet the needs of the particular group.

An overall goal statement is shared with group members at the outset. It encompasses the global objective of enabling participants to develop their feelings of comfort and their effectiveness in dealing with their own world and that of others. Awareness and acceptance of a number of components are needed by each member for resolution of this theme.

These include:

- (1) the concept of humanness and of being a person in our society;
- (2) the responsibilities, advantages, and difficulties of being male in our society;
- (3) sexuality trends and changes within society;
- (4) implications and integration of these components for the person.

The activities described below are to be used selectively and to the extent needed to stimulate interaction and exploration of relevant issues; in no way should they be viewed as substitutes for dialogue. We encourage the development of an active, caring, and gentle atmosphere to promote discussion of the kinds of changes males need to implement in their lives today. Such group experiences with other males are likely to encourage a deeper understanding and a richer acceptance of self and others.

**STAGE I:      EXPLORATION OF GROWING UP MALE**

**Objective:**      To understand how we have learned about and accepted or rejected masculine role expectations.

**Possible Activities:**

**Brainstorming.** Members brainstorm from a pre-adolescent perspective:

"Boys are ..." "Girls are ..." and from a present perspective: "Men should (Women shouldn't)..." "Men shouldn't (Women should)..."

**Fantasy.** Members fantasize five-year-olds playing at the beach, in sandbox, etc., illustrating how male roles are learned.

Written Recall of Personal Experiences. Members write about sexual information input as a child; learning about physical development; learning about masculine behaviors.

Role Play. Members illustrate what males are supposed to do in specific situations in their roles as son, father, husband, employer, etc.; in an argument, at a funeral, at a ball game, etc.

Listening. Members write a list of topics which are OK and Not OK to discuss with others.

Innocuous Topics. To prove that it is possible, and to encourage males to be verbally expressive, dyads discuss innocuous topics assigned at random in two-minute dialogues. Sample topics: post, ear, leaf, etc.

Role Reversal. In a reversal of sex role, one member of a dyad assumes the place of a woman: dating, at home, as a mother, etc.; then roles are exchanged.

Materials: Paper, pencil

Assignments: Diary or journal involving observation, further recall, personal feelings.

## STAGE II: INTIMACY WITH SELF AND OTHERS

Objective: To help us experience both the freedom and the reasonable limits of intimacy.

Possible Activities:

Quaker Meeting. Eyes are closed. Each person is invited to answer these questions: Whom do you see as important in your past? How do they want-

you to be or think you should be? How do you feel? What do you want to do? How do you want to be? Answer these questions for the present.

Circle of Awareness. Small groups express their feelings non-verbally through their hands. See Stevens (1971, p. 214 ff).

Dyadic Interview. Group members interview each other. See Pfeiffer and Jones (1969, pp. 97-107).

Triad. Groups of three discuss the following: five statements of qualities I like about myself; three statements of ways I withhold from others.

Materials: None

Assignments: Continue diary or journal emphasizing personal experiences with intimacy, reflecting upon feelings within and outside of the group.

### STAGE III: CHOICE AWARENESS

Objective: To understand that our caring and ruling behaviors are choices we have made that we can change.

Possible Activities:

Ruling Choice Dyad. How you use rank, power, age, seniority; how you respond to the ruling choices of others; how you own, control, or manage others.

Yes-No Dyads: palms together, one says Yes, the other No, several times; then reverse statements.

Mirroring With Hands: one person ruling, the other ruled; reverse.

Pair Role Play: one stands over the other; reverse; then stand as equals.

Caring Choice Dyad. Assign to the other person the role of someone important to you. What caring do you want to give, receive, avoid, withhold? Express verbally or non-verbally the caring you feel for that person.

Pair Caring: one gives the other the caring he wants the other to have; reverse.

Materials: See Nelson & Bloom (1975) for further activities.

Assignments: Observation of personal choices, implementation of different choices, examining personal feelings, updating the diary or journal.

#### STAGE IV. RELATIONSHIPS

Objective: To help us interact with others in caring ways and to speak to the relationship.

Possible Activities:

Statements to Group Members. Relationship statements are shared by each person within the group: "This group is ..." "My feeling right now is ..." "My feelings toward you now are ..."

Sociogram in a Fishbowl. In turn, each person stands in the center of the group with eyes closed while others position themselves to express their relationship to him.

Reverse Sociogram. Focus person arranges others where and how he sees them in relation to himself.

Dyad. Each member of the pair completes the statement: "What I want

from you right now is ..."

Materials: None

Assignments: Continue journal or diary by exploring and considering personal relationships and feelings for others.

#### STAGE V: TRAINING FOR TOUCHING

Objective: To help us to express our difficulties with, and experience our need for, touching.

Possible Activities:

Role Play. Recall where touching messages came from, and role play experiences with son and dad, son and mother, male/male friends, male/female friends. Illustrate both OK and Not OK touching messages.

Blind Milling. Mill around blindly and non-verbally in darkened room. Move first without, and then with, touching.

Active-Passive Lineup. Form facing lines and rotate after every 1-1/2 or 2 minutes. Persons in the active line act out touching contact, passive persons receive, until all group members experience both active and passive modes with all other members. Communicate feelings of the relationship through touching.

Materials: None

Assignments: Continue journal or diary by exploring "Touch" and "Don't Touch" messages within and beyond the group; consider related feelings.

STAGE VI: FUNCTIONING IN THE HERE-AND-NOW

**Objective:** To help us give and receive direct, current messages and to help with leave-taking.

**Possible Activities:**

Role Play and Reality. Members act out negatives -- rejection, denial, uncaring, dominating, etc.; then switch to open and honest statements that are person-relevant.

Group Impressions. With eyes closed, members sit in a circle and are asked to point to another -- of whom I'm most afraid, to whom I feel most attracted as a human being, who seems strongest, who seems softest, etc. On signal eyes are opened and discussion follows.

Written Feedback. Each person writes a signed note to each other person in the group, striving for relevant positive and negative feedback.

Specifying a Contract. Each group member specifies a personal contract he will accomplish: "I will make more caring, fewer ruling choices." "I will stop trying to prove myself so much," etc.

Saying Goodbye. Each member says what is up-to-date for the relationships involved, leaving nothing important unsaid. All affirm OKness of self beyond the limits of the group. Each person takes his leave.

**Materials:** Paper, pencil.

**Assignments:** Develop further awareness goals and acceptance of self in everyday life.

At the end of the group's final session, we have shared personal statements, journals, and written feedback comments to assess the

significance and success of the program, and to aid in the planning of future groups.

### Self-Esteem Workshop

Another group in this category is designed for persons experiencing difficulties because of an inadequate sense of self-esteem. The workshop described here is used by Stanley Hunt and Stanley Pavey of the University of Maryland Counseling Center, and the following is their elaboration of the workshop design.

### Group Format

The Self-Esteem Workshop is designed for clients who consciously devalue themselves. Harsh self-criticism for failures to meet their own standards characterizes these persons. Feelings of inferiority, inadequacy, and guilt or shame frequently accompany this self-criticism. The workshop is not meant for clients experiencing chronic depression or severe obsessional problems, nor for those who suffer from psychotic or borderline conditions. People who are engaged in ongoing individual counseling are usually excellent candidates and will benefit from the efforts required in the workshop. While mixed sex composition is desirable, it does not seem to be essential.

The workshop is planned for six or eight clients who meet weekly with two co-leaders. Each of the first seven sessions requires one and one-half hours minimum, although a two hour meeting time is preferable. An eighth follow-up meeting occurs from four to six weeks after the

seventh meeting for purposes of encouraging sustained self-enhancement behaviors and for evaluation. Obtaining client commitment to attendance at the seven working sessions is essential.

### Aim and Methods

The workshop is primarily behavioral in conception and organization, although techniques are influenced by Gestalt and Ego-Analytic thinking as well. The aim is to teach participants to use a variety of techniques to disrupt habituated patterns of self-devaluation and to develop self-enhancing alternatives. Even though referral criteria bring members to the group who are aware of their self-criticism, it is necessary to sensitize them to the harshness and extent of their self-devaluing thoughts and emotions. As clients increase their awareness of the habits of self-criticism, they are better prepared to attempt to disrupt these habits. Group discussion serves to broaden the individual's judgmental perspectives and to encourage self-change efforts by offering peer and leader approval. Through structured exercises in the group, clients learn techniques for disruption of self-devaluing habits. Homework between sessions encourages practice of technique introduced in the group. This practice is reviewed at the beginning of each subsequent session in order to encourage evaluation of effects and refinement of application. No specific time frames are offered for each of the exercises described, but leaders can experiment with roughly equal time allotments for each segment within the total time given.

### SESSION I

1. Introduction and obtaining commitment.

The leaders introduce themselves, the goals for the workshop, and the nature of the structured experiences. They encourage each member to introduce herself or himself and to assess the appropriateness of the workshop for her or his problems. Those who do not find the workshop appropriate or who cannot commit themselves to the seven sessions may leave the group at this point:

- ← 2. Pride-Shame lists and discussion of the basis for self-judgment.

Each participant is asked to list on paper five things "which make you most proud about yourself" and five things "which make you most ashamed of yourself." It may be necessary for the leaders to encourage completion of the "proud" list. The lists are collected by the leaders, who use the items, without identifying the authors of the lists, to stimulate group discussion of what makes people worthwhile. The leaders attempt to obtain participation by all members in this discussion. It is typically necessary for the leaders to challenge the assumption that human worth is determined solely by achievements.

- ← 3. Relaxation training.

Training in complete muscular relaxation is introduced by the leaders. We employ the cassette tape by Arnold Lazarus (I.D.I., Basic Relaxation Exercises) with the clients lying down. The leaders explain that relaxation is a pleasurable experience within a client's control, and suggest that individuals may thus learn to feel better about themselves without needing an instrumental goal. Following training, members are

encouraged to begin daily practice of their relaxation exercises.

4. Homework: Keeping a record of "put-downs"

The leaders distribute daily record forms to the clients and offer instruction in the recording of self-devaluing thoughts and statements (put-downs). They define and discuss methods of regular recording between sessions. The leaders express the hope that clients will sensitize themselves to their self-devaluation through self-observation and that they attempt to discover events which stimulate undue self-criticism. It is made clear that the homework will be collected and discussed at the next session (simple forms can be made up and copied).

SESSION II

1. Review of Homework

The leaders collect the daily records of put-downs and quickly review them. They encourage the group to discuss the difficulties and discoveries of self-criticism. It is wise to try to elicit responses from all members, to model approval of record-keeping and self awareness, and to confront directly any resistance to the assigned task.

2. Alternatives to put-downs: "I'm O.K."

Because clients are more apt to justify their self-criticism than to imagine self-enhancing alternatives, it is appropriate to begin with a simple technique which permits a self-enhancing statement or thought to replace a self-critical thought. The leaders teach clients to add the

thought, "...but I'm O.K." to every put-down. For example, "I'm not as smart as he is, but I'm O.K...." or, "I didn't study as much as I could have for the exam, but I'm O.K...." Each member should attempt to practice replacing a self-criticism with the "...but I'm O.K." statement in the session.

### ← 3. Relaxation and fantasy of "I'm O.K...."

Clients are again asked to relax physically while recumbent. A brief review of the muscle groups is helpful to clients at this stage, and serves to reinforce their week's practice in relaxation. After they are relaxed, clients are instructed to imagine a situation in which they put themselves down and to practice adding the self-enhancing thought, "...but I'm O.K." Repetitions of this task serve to associate the pleasurable feelings of relaxation with an attitude of self-acceptance.

### 4. Homework: Paying self a compliment.

The new homework assignment for this session requires that clients pay themselves a compliment at least once daily in the course of normal conversation. Typically, clients find this a frightening assignment and need practice in the session as well as ample encouragement from the leaders. Brief pairing of clients in practicing compliments is advisable in order to avoid the anxiety of complimenting oneself in the total group.

Daily record sheets are again distributed to assist the clients in recording their put-downs and self-accepting replacement statements during the week. A section of the daily records should be set aside for recording

their daily self-compliments.

### SESSION III

#### 1. Review of homework.

The leaders again collect and review clients' daily record sheets.

Discussion of the homework may best be begun by questioning group members about their reactions to the assignment. The leaders thus begin to recognize individual success and to confront individual resistance to the tasks. For some members, paying oneself a compliment is equivalent to boasting or bragging. The leaders may be helpful by suggesting that there is nothing wrong with self-compliments.

#### 2. Correcting projections: "I see - I imagine" technique.

Some participants have developed the habit of projecting harsh self-judgment onto others. The "I see - I imagine" technique, borrowed from Gestalt therapy, is introduced to assist these clients in differentiating sensory data from personal interpretation. The leaders model the technique by one leader's paying her/himself a compliment and reporting on what is perceived and what is interpreted from the other leader's response. The leader who is reporting is also offering a model for comparing his/her personal interpretation with the actual thoughts and feelings of the other person--"checking out" the other's reaction instead of assuming that it is negative.

Following instruction, group members pair up to practice the "I see - I imagine" technique by having one partner pay herself/himself a compliment, then report both what s/he observed and what s/he imagined in partner's response. Partners are expected to describe their actual thoughts and feelings to help each other to check out interpretations. Pairs should reverse roles after each turn, and each member should practice at least three compliments and "I see - I imagine" analyses.

Group discussion of reactions to this technique should follow the practice in pairs. This may be a difficult exercise for clients who do not project their self-criticism onto others.

3. Homework: Practice in checking out others' reactions.

The new assignment for the week requires clients to record their perceptions and interpretations of their friends' reactions after they have paid themselves a compliment, following the "I see - I imagine" principles. At least one compliment and analysis a day is expected. The leaders urge clients to check out their interpretations with their friends when they feel able, as they have practiced in the session.

Daily record sheets are distributed so that clients can continue to record their put-downs and self-enhancing "I'm.O.K." statements or thoughts. The section of the record where daily self-compliments are recorded should remind clients to perform the "I see - I imagine" analysis of friends' reactions.

## SESSION IV

### 1. Review of Homework.

Although daily record sheets are collected, the leaders concentrate more upon eliciting individual reports of progress to the group. Group members should be becoming more proficient at praising each other for success. Since the "I see - I imagine" technique is difficult for some members, the leaders should understand this difficulty and look for other aspects of the homework to examine and praise.

### 2. Further practice of the "I see - I imagine" technique.

Members pair up with different partners from last session to obtain further practice in self-compliment and analysis of their partner's reactions. Even for clients who do not project self-criticism, this practice serves to enhance the attitude that self-compliments are appropriate and acceptable to others.

### 3. Relaxation associated with pleasurable fantasy.

Most clients will now be reasonably adept at achieving muscular relaxation in the session. The leaders instruct the group first to imagine putting themselves down, then to interrupt the put-down with a fantasy of themselves in a pleasurable situation of their own choosing. At first, the pleasurable scene may reflect instrumental achievement, so the leaders may encourage attempts at imagining pleasurable scenes which do not involve instrumental behaviors. This technique goes beyond the "... but I'm O.K." technique in helping the client to interrupt put-downs with a self-enhancing

response involving both pleasurable feelings and an attitude of self-approval.

4. Homework: Practice with pleasurable fantasy.

Daily record sheets distributed to clients are modified to encourage the interruption of put-downs with a pleasurable fantasy rather than with the "... but I'm O.K." thoughts of previous assignments. The leaders stress that, while both techniques for interrupting self-criticism are acceptable, this week's practice should emphasize the use of self-enhancing fantasy. In addition, recording of self-compliments is expected to increase, so more space is allowed for recording of incidents involving self-compliments in communication with others.

SESSION V

1. Review of Homework.

It is important for the leaders to continue to collect and review the daily record sheets. Resistance to homework practice tends to become more obvious by this time and should be confronted directly. It is expected that clients will have had differing success in interrupting put-downs with pleasurable fantasy. Group members can be helpful in approving of their fellow members' attempts, regardless of successful accomplishment.

2. Defense against criticism by others.

Although these clients are typically their own worst critics, most have been exposed to others who find fault with them. The leaders describe the use of a self-enhancing statement as a defense against criticism by others. The leaders should model self-enhancing responses with each other. The group members are then paired with new partners to practice mild criticism

and self-enhancing responses. They then reconvene for general discussion of the experience. There may be some hurt feelings to be assuaged and understood in the group.

### 3. Covert rehearsal of defense against criticism.

Clients are requested to relax deeply while recumbent, and to imagine a situation in which they are criticized by another person. In fantasy, they are to practice responding with a self-enhancing statement, as they have done in reality with their partners. The leaders thus introduce the technique of covert rehearsal to help clients anticipate situations in which they expect to feel disapproval. Since the clients may arrange their contemporary lives to avoid critical friends, the leaders may have to suggest situations in which authorities (such as parents or teachers) are apt to be critical.

### 4. Homework: Practice in covert rehearsal.

The new element of the homework requires daily practice of relaxed fantasy in which the client imagines criticism from others and imagines a self-enhancing response. The daily record sheets also call for continued practice in interruption of put-downs with pleasurable fantasy or "...but I'm O.K." Practice in self-compliments is also to be continued and recorded.

## SESSION VI

### 1. Review of the homework.

Given the difficulties that some clients experience with covert rehearsal practice, it is wise to begin this session's review with reports

of practice in compliments and interruptions of put-downs. It is then easier for the group to respond differentially to their experience with attempts at covert rehearsal. Discussion of covert rehearsal may bring out some clients' habit of feeling disapproved of when they decline another's request for new responsibilities. This discussion can pave the way for the next activity in the workshop.

2. "I should - I want" exercise.

The leaders briefly introduce distinctions between obligations and personal desires. Then clients are paired with different partners. The task is to list aloud to the partner those things that one feels s/he should do or like, then those that one wants to do or like. The partner then has the task of noting similarities and differences among items on the two lists.

As the group reconvenes for discussion, it usually becomes apparent that many clients find their lists of obligations to be extensive and their wants to have become confused with obligations. The leaders then try to help members begin to make more clear distinctions between "shoulds" and "wants." They also are helping clients to observe and question their attitudes about responsibility and conscientiousness.

3. Homework: Replacing "should" with "want."

This session's assignment requests clients to make a daily record of things they feel they ought to be doing and a list of things they feel they would really like to do. A separate list is made of things clients are doing that they don't want to do. At least once or twice a day, the client tries to substitute doing something s/he would like to do for something s/he

feels obligated to do.

The daily record sheets also encourage continued practice in interruption of put-downs and in application of self-enhancing behavior (self-compliments and covert or active self-enhancement in response to others' criticism).

## SESSION VII

### 1. Review of homework.

Since this is the final working session in the workshop, the leaders are shifting responsibility for maintaining practice in self-enhancement from themselves and the group to the individual member. The initial topic is the "I should - I want" recording and substitution practiced during the week. The leaders make use of members' experience to show how an individual can take responsibility for distinguishing between obligations and desires as an ongoing life task. In exploring their "wants," some clients will have begun to examine their emotional life more thoroughly and can be encouraged to continue this effort.

### 2. Evaluation of the workshop.

The leaders stimulate group discussion of the value of the techniques introduced in the workshop. Members are encouraged to discuss frankly their reactions to all of the techniques offered. It is expected that individuals will have had differing success with the variety of techniques practiced during the workshop. The group members are also encouraged to discuss their reactions to the leaders' style and behavior. One of the benefits of this discussion appears to be a differentiation of attitude toward

the leaders and workshop, reducing the tendency toward idealization of the leaders with its attendant threat of collapse of new behavior upon termination. Individual members may also use this discussion to explore their needs for additional assistance, an exploration often supported by other members, especially those who are engaged in counseling during the course of the workshop.

### 3. Written evaluation.

Following the group discussion of the workshop, the leaders request that each member complete a written evaluation instrument. Upon completion (about 10-15 minutes) arrangements are made to meet again as a group in four to six weeks.

## SESSION VIII

This follow-up meeting is not structured as the seven working sessions have been. The leaders adopt a less directive approach from the beginning.

Members take the initiative for re-acquaintance and for reporting on their progress during the previous weeks. The leader's role is to facilitate discussion and to obtain more refined judgments of the utility of different techniques for the members. These judgments can be used in further refinements of future workshops. Discussion and acceptance of individuals' experiences facilitates transition of responsibility to the individual and permits more effective referral when appropriate. The written evaluation instrument is administered a second time during this meeting.

## Women Aware

Another theme group with a specific purpose and target population is the "Women Aware" program designed by female faculty, staff and students from several agencies at Northern Illinois University. This group aims at assisting women to increase self-understanding and self-awareness, with particular focus on being female and the ways in which femaleness influences the quality of their lives. The ensuing pages describe the specific objectives and component activities of this structured theme group.

### Group Format

The goal of this group is to increase participants' "female awareness."

Program planners have defined female awareness to include the following:

- 1) the awareness that our own perception of the female role has an impact on our behavior;
- 2) the awareness that we CHOOSE how to define our femaleness whether we know it or not;
- 3) the awareness that our definition of our female role has implications for our vocational choices, self-image, self-concept, and general awareness of our personal potential;
- 4) the awareness that our culture stereotypes women, is prejudiced against women, and is ignorant about women, all of which have an effect on our self-image and our relationships with other women;
- 5) the awareness that our socialization as women and our histories have to do with how we see ourselves now;
- 6) the awareness that our physical selves and our feelings about our physical selves have an effect on our behavior.

Based on these observations, a set of five participant objectives was identified, and two-hour small group sessions were designed to facilitate accomplishment of each objective. A typical group has from 6-10 members,

and, ideally, has two co-facilitators. Session activities and objectives are summarized below.

### SESSION I

The initial meeting's objective is to explore historical and cultural perceptions of femininity. The following are suggested activities for this session.

#### 1. Unfinished sentences (Time: 60 minutes)

These may be passed out on mimeographed sheets or not as the leaders decide. They may be written and then read or spoken aloud with only a short time allowed for answering. The best procedure is to go around the circle first without discussion since the participants may not be familiar with each other or each other's viewpoints yet. Notice that these sentences proceed from more general to more personal statements. Sometimes, discussion and responding to some of the sentences may be saved for the end of the session; perhaps a contrast will be observed after the intervening activities change views.

1. Today being a woman is \_\_\_\_\_.
2. A girl becomes a woman when \_\_\_\_\_.
3. Men expect women to be \_\_\_\_\_.
4. The women I like most always \_\_\_\_\_.
5. The women I like most never \_\_\_\_\_.
6. My mother is a lot more \_\_\_\_\_ than I am.
7. I never wished I was a man until \_\_\_\_\_.

8. Unlike the average woman, I choose to \_\_\_\_\_.
9. As a woman, my potential may be \_\_\_\_\_.
10. Because I'm a woman, I know I can \_\_\_\_\_.

The following three exercises can be used as options or together as readers wish for the rest of the session.

2. Quotes (Time: 15-30 minutes)

Below is a sampling of quotes from which leaders may choose several to read to the group and solicit brief reactions. Since the aim is to show that discrimination is historical and exists at the present time, even in statements from national leaders and persons thought to be quite radical, a wide variety can be included most effectively.

Like most women (my wife) thinks with her glands instead of her head... When I got married I won my next election by 67,000 votes. So you can figure a good wife is worth at least 50,000 votes.

--Senator Mark Hatfield (Oregon), 1973.

We fully envision, however, that in the near future we will fly women into space and use them the same way we use them on earth--for the same purpose.

--Astronaut James Lovell.

But no one can evade the fact that in taking up a masculine calling, studying and working in a man's way, woman is doing something not wholly in agreement with, if not directly injurious to, her feminine nature.

--Carl Jung, 20th Century Psychologist.

Just get on with being woman, find the contentment and the reflected happiness of being secondary to men.

--Wallace Reburn, THE INFERIOR SEX

Baseball is a contact sport. We have a five-page medical report which points out that girls are incapable of competing on the same level with boys. Their bones are more vulnerable, their reactions slower.

--Robert Stirrat, Publicity Director of Little League.

Whenever a woman dies there is one quarrel less on earth.

--German proverb

There is a good principle which created order, light, and man, and an evil principle which created chaos, darkness, and woman.

--Pythagoras.

It would be preposterously naive to suggest that a B.A. can be made as attractive to girls as a marriage license.

--Dr. Grayson Kirk (former President, Columbia University).

The only alliance I would make with the Women's Liberation Movement is in bed.

--Abbie Hoffman

Women on the average have more passivity in the inborn core of their personality....I believe women are designed in their deeper instincts to get more pleasure out of life when they are not aggressive.

--taken from a quote by Dr. Benjamin M. Spock, DECENT AND INDECENT

Some more commonly heard statements from numbers of not-so-notable voices include these, to be read aloud in run-on sentence fashion.

A woman's place is in the home. If you're so smart, why aren't you married? Can you type? A smart woman never shows her brains. Women are always playing hard to get. Don't worry your pretty little head about it. Dumb broad. Women like to be raped. A woman's work is never done. All you do is cook and clean and sit around all day. Women hate to be with other women. Women are always off chattering with each other. Some of my best friends are women...

3. "Click!" (Time: 15-30 minutes)

The leaders present the following stimulus materials to the group:

"The "click" phenomenon was first labeled by Ms. magazine in its first issue. The "click" experience happens when you're going along minding your

own business and suddenly something happens to make you realize that women are considered inferior by our culture--or that YOU, as a woman, are considered inferior in some way. You may have seen the ad or heard the phrase or experienced the event many times before--but, somehow, suddenly it hits you in a new way--"click." Be careful of expressing your new awareness of this. You may be accused of being oversensitive, or paranoid, or a "woman's libber"--but you know, inside, that you felt that CLICK and that you won't let it go by again.

Here are some examples:

You suddenly notice that all the "remove hair permanently" ads are directed toward women. Click! Why is it okay for men to be hairy on their faces, arms, legs, and not women? Why don't men want to "remove hair permanently" instead of shaving every day? Next day it hits you that almost all diet aid ads (Ayds, Kelp and B-6 diet) are directed toward women. Click! Aren't men ever overweight? Sure they are! So why aren't the ads directed toward the paunchy executive? How come, instead, a lot of the exercise ads are for men? Could it be--click!--that it's because in our culture youth and passive beauty are much more important for women--because men say so? Why? What? How come?

A physician who is female is standing around at a cocktail party listening to people ask her husband, "And what do YOU do?" Click! Why doesn't anyone ask her? Could it be that they never considered that she might have an exciting career?

Another woman whose day began at 6 a.m. is at the same party. That day she got the kids up, fed them, dressed them, got them off to school, cleaned the downstairs, went shopping, had lunch ready, took the baby for a checkup, cleaned the upstairs, carpoled the kids home, settled an argument, found another babysitter at the last minute, had her husband's suit ready, and charmed his boss at a party. Someone says to her, "Let's see, Mrs. Smith, you're not working, are you?" What do you call WORK anyway?

A boy who "acts like a girl" is a "sissy" while a girl who "acts like a boy" is a "tomboy." To be a tomboy is something adults indulge and find cute; to be a sissy is something that alarms people. Click! Could it be that it's understandable why anyone would want to act like a boy, and not understandable why anyone would want to act like a girl--unless she happens to be one? Could it be that acting like a girl just isn't very admirable?

4. Labor Statistics--Their Implications (Time: 15-30 minutes)

A condensation of an article by Bem and Bem (1973)<sup>1</sup> which draws on some U.S. Dept. of Labor statistical data to amplify further the discriminatory treatment of women--this time in the world of work.

5. Unfinished Sentences--a Review (Time: 10-15 minutes)

At the close of this first session, the group can turn again to the incomplete sentences used at the outset of the meeting and discuss any

<sup>1</sup>Bem, S.L. and D.J.: Bem, "Training the woman to know her place: The social antecedents of women in the world of work," Palo Alto, CA: Stanford University, 1973.

alterations in their responses to them, or possibly add new, more personal ones.

At the close of this first session, each member is given a copy of the "Polly Williams" story (fictional biographical sketch) for discussion at the beginning of the next meeting.

## SESSION II

The aim of this session's activities is to explore our own socialization as women.

### 1. Polly Williams Story (Time: 30-40 minutes)

The leaders begin Session II with a full group discussion of the Polly Williams story assigned as homework last time by asking some of the following open-ended questions (or others of their own choice).

- What was your reaction to reading about Polly Williams?
- What do you think about Polly Williams?
- Was Polly's life "just an ordinary life?"
- How did you respond to Polly's "drifting" into womanhood?
- How did you respond to her whole "drifting" life before marriage?
- What were your reactions when Polly's drifting life turned toward a strict new orientation--the life of her husband and family?

### 2. Who's Who For You? (Time: 45 minutes)

The area of role models is looked at via Who's Who For You? For this activity, the leaders divide the members into two smaller groups for discussion. The items to be answered by each participant are:

- (1) Name three people you admire or respect.

(2) Name three people who have had the greatest impact on your life.

(3) What one person would you most like to be like?

Each member writes down on a sheet of paper his/her answers to the above questions. Then, in the two sub-groups, each co-leader moderates a discussion using the following questions to frame the interchange:

(1) Whom did you list for each of the three questions? Why?

(2) What is your relationship with these persons?

(3) Are they male or female? Would your answers have been different if this had not been a female group?

(4) What are the common characteristics you see in these people that you like?

(5) Do you see those characteristics in yourself? If not, how are you planning to incorporate them?

(6) Did you consider putting yourself as the person you'd most like to be like?

### 3. Parents' Chat (Time: 30 minutes)

The area of family influences and expectations can be explored through this activity. For it, the following instructions are given.

"Pair up with someone and sit together. I want you each to imagine that you are your mother."

"You and this other mother have just met and are each talking to the other about your daughter--yourself. In other words, you are talking about yourself as you imagine you mother might have talked about you at various times in your life."

"First, take a few minutes to converse about the birth of your daughter, talking as your mother might have shortly after your own birth. Discuss your hopes and dreams for this new baby daughter. Are you glad she's a girl? What do you expect from her? Are these expectations different than they might have been had she been a boy?

(Allow several minutes for each discussion; then go on to the next paragraph).

"Now, take another few minutes to converse with parent, this time talking to each other about your daughter as she is now-- what she has done with her life, how you feel about her, whether she has met your expectations, how she compares with any other children you have, or whatever else occurs to you."

(Allow another five minutes or so for such conversation. You may have the "mothers" mingle and chat with several other parents. When the conversation is stopped, have them break into groups of about five and give them the directions in the next paragraph.)

Take several minutes to discuss what you what you have discovered through this experience. How did you feel about doing this? What did you learn about your mother?. About yourself? Are you like your mother? If so, does that bother you? Do you think your mother likes you? Did she like you when you were little? Have you checked this out with her recently? What did you notice about the "mothers" of your partners?

### Session III

The objective herein is to determine how our socialization affects us.

1. **Saturday Night at the Dorm** (Time: 45-60 minutes)

To examine the role of peers and peer influence, this session begins with the following activity. Give each participant a list of the "dorm residents," as follows.

- Peggy - doesn't really have any plans, so will use the evening for studying and watching TV by herself
- Susan - gets together with other friends with no plans; they go out for the evening together
- Jane - doesn't date a lot, but has a first date tonight with a guy in her math class
- Karen - plans to spend the evening with a girl friend in another dorm
- Mary - has few dates; tonight she's going out with a friend of her roommate's boy friend (whom she's never met)
- Sally - has a steady boy friend and goes out almost every weekend -- seems always to have a good time
- Ann - has no plans here, so she went home for the weekend
- Linda - has plans to be with several women friends, but broke the plans when she was asked out by a guy
- Carol - has been looking forward all week to this free time so she could work on a project

The following questions for discussion are suggested, but others may be added. The leaders break the group into two sub-groups to discuss these questions: (1) Which of these persons have you been? How did you feel in that situation? Why? (2) Have you felt social pressure in these situations? From men? Women? Yourself? (3) Which ones would you like to be? Why?

2. Relationships with Men (Time: 45-60 minutes)

The previous activity leads readily into discussion of the area of heterosexual relationships. For this the participants move back into the total group. The leaders ask some of the following open-ended questions and/or add their own.

Do you see your relationship with men (friends, boyfriends, father, relatives) as having influenced your ideas about yourself (as a woman)?

Are you a different "self" (woman) in the company of men than you are with women?

Do you act differently with men than with women? Do you play a different role?

In what ways is the influence of men different from the influence of women?

How have culture and society influenced your relationships with men and your ideas about yourself as a woman?

Do you feel different about yourself after getting compliments from men on your attractiveness and/or appearance?

How have you felt (about yourself) when you were not dating?

SESSION IV

1. Body Talk

In this meeting participants focus on dimensions of their physical being such as attractiveness, health, and sexuality, with a view toward understanding cultural influences on their attitudes and behavior. For these activities, the time frame can be altered, and some or all of the activities used at the leaders' discretion.

A. Attractiveness and Beauty (Time: 15 minutes)

The group is divided into triads to complete the open-ended sentences below, with five minutes allowed for each sentence.

"The three things I would most like to change about my body are ..."

"I think I am most attractive when ..."

"The thing I like most about my body is ..."

The leaders then ask participants if they found important similarities among their responses. Important differences.

2. **Memoirs of an Ex-Prom Queen** (Time 20 minutes)

The leaders hand out copies of excerpted pages from Kates-Shulman's (1972) book (suggested pages include excerpts from pages 20-27). Reactions are discussed in the total group. How important is beauty to you? For whom do you wish to be beautiful? Do men worry about their looks as much as women? Are they judged on their looks as much as women? Who do you think is beautiful?

B. **Health** (Time: 20 minutes)

The leaders begin by reading this statement. The preface is geared toward college students, but this information is useful to all.

"NOW THAT YOU ARE HERE AT NIU --ON YOUR OWN, AWAY FROM HOME -- YOU HAVE BOTH THE FREEDOM AND THE RESPONSIBILITY OF YOUR OWN BODIES. NO ONE WILL TELL YOU TO EAT MORE OR LESS, NO ONE WILL TELL YOU TO GET MORE SLEEP, NO ONE WILL KNOW YOU HAVE A SORE THROAT AND NEED TO SEE A DOCTOR -- UNLESS YOU TELL THEM. YOU ARE RESPONSIBLE FOR YOUR PHYSICAL SELVES IN A WAY YOU HAVE NOT BEEN BEFORE. EXERCISE, NUTRITION, BIRTH CONTROL, YEARLY CHECKUPS -- ALL ARE YOUR HEALTH IN THE FUTURE. HOW DOES THIS WAY OF LOOKING AT IT STRIKE YOU? HAVE YOU BEEN FEELING OR ACTING RESPONSIBLE IN THIS WAY? ARE THERE EXPERIENCES ABOUT THIS YOU'D LIKE TO SHARE?"

They then pass out the women's health fact sheet, with instructions to read and discuss selected facts in the total group. (The facts from among a list of 20 items listed below are exemplary; others are easily constructed.)

**SOME HEALTH FACTS FOR FEMALES THAT  
SHOULD BE COMMON KNOWLEDGE BUT AREN'T**

1. The vaginal walls are self-cleansing tissue. Soap and water bathing of the external genitals is all that is necessary for cleanliness. Douching, unless for medical purposes and prescribed by a physician, is not necessary.
2. Ditto for vaginal deodorant sprays, which are not only unnecessary but for many women are harmful. Imagine spraying those harsh chemicals on the tissue inside your mouth; the tissues are much the same. Don't let Madison Avenue fool you into thinking you need to buy this product.
3. Ordinarily, vaginal itching is NOT a symptom of V.D. Rather it is usually a symptom of rather common vaginal infections (trichomonas or monilia) which can be treated quite easily. Don't suffer in silence!
4. Any reducing diet which does not include foods from the "basic four" groups of foods -- dairy, vegetable, grain and high protein products -- is lacking in essential nutrition. Don't let weight loss become health loss for you. Prolonged use of fad diets can cause malnutrition, hormonal imbalance, and assorted other unpleasant effects, including death.
5. There are birth control methods available at low cost without prescription which are almost as effective as the pill -- a condom and contraceptive foam used together. (But use them correctly!) Buy them at any drugstore. Remember, if you and your partner don't communicate well enough to talk about preventing pregnancy, you don't really communicate well enough to make love.
6. Every female over 17 needs a yearly Pap smear for cervical cancer. It is absolutely painless and should be part of a routine pelvic examination.

7. Many college students experience emotional difficulty during their college years. For the only time in your life, free, confidential help in counseling is available for you. Don't minimize your distress and don't let false pride get in the way of admitting to yourself that you could use an objective listener.
8. Both treatments for V.D. (penicillin) and trichomonas (Flagyl) should never be mixed with alcohol. Alcohol reduces the effectiveness of penicillin, and, with Flagyl, can make you very sick.
9. If for any reason you are taking tranquilizers or barbiturates, never consume alcohol with them. These drugs can combine with alcohol to produce an effect many times stronger than either would produce separately -- an effect that can be lethal.
10. If you are raped or assaulted, do not go home, do not go shower, but go straight to a hospital or health service. Get treated, get confirmation of your injuries, and then, please file a complaint with the police so that this experience doesn't happen to someone else.
11. Hypertension hits people of all ages, and HAS NO SYMPTOMS. (Having a hot temper, being tense, or having a red face are NOT symptoms of hypertension). It can be checked painlessly with a blood pressure check. Make sure it's a part of your yearly physical.
12. If you have been smoking for less than five years, and quit now, your lungs will be almost back to normal in ten years.
13. Yes, there are alcoholics your age. Plenty of them. Major clues to a drinking problem are: drinking alone, drinking IN ORDER TO have a good time or relax, not feeling free to turn down a drink, and not being able to remember events that happened while drinking. Realize, please, that alcohol abuse hits all kinds of people and that it doesn't help to fool yourself if you do suspect a problem. Get help!
14. Regular exercise should be a part of everyone's life, not just for figure and weight control, but for heart-lung efficiency. Developing a daily program of running, bicycling, swimming, or even walking fast can pay off in later years as well as now.

C. Sexuality (Time: Remainder of Session)

The leaders hand out the following excerpt from Sexuality by Peg

Mayo, which is reprinted from the University of South Dakota Crisis Intervention Resource Manual (1973).

Crisis Intervention Resource Manual (1973).

"If I do not know that you will love me tomorrow, dare I love you today, uncertain as I am of my attractiveness and my courage? Dare I turn you away? Will a chance ever come again? What choices do I make on what standards? Do I turn you away because I have vowed virginity to my dreamed-of husband-to-be, or do I turn you away because I am afraid my vulva is deformed (I haven't found a good illustration in a book yet), or do I turn you away because you are not handsome enough for me to brag about, or do I turn you away because I am certain I will be physically hurt, or do I accept you because you are wanted by others, or do I accept you because my body responds to your body, or, finally, do I accept you because I love you? Do I insist that I accept you spontaneously and thereby forget whatever I know of birth control? Do I plan for you to come to my house when my parents are away, knowing there is danger they will return? Do I find your body miraculous or hideous? Do I flaunt mine or hide it? How do YOU feel about all this... do you even think to wonder? Am I ashamed or proud or pleased or betrayed or satisfied or hurt or delighted or comforted on the winner? Who am I? A young woman in this case."

Following their reading of this, the group can engage in open discussion of their reactions to it. If the discussion lags, these incomplete sentences can be shared with the group, and their individual responses to them solicited and discussed.

1. "To me, the sexual revolution means ..."
2. "The thing that confuses me most about sex is ..."
3. "I disapprove of ..."
4. "Love and sex ..."

#### SESSION V

The overall objective for this last meeting is to help group participants to focus on future life style choices.

← 1. Relaxation and Fantasy Exercise (Time: 10 minutes)

The leader may want to add to the following introduction and tie in personal insights gained over the previous sessions.

"In this, our final session, we'll explore some of our fantasies, needs, personal goals, and possible careers. Before we let our fantasies loose, let's relax our bodies and minds, and remove present distractions."

In a soothing tone, the leader gives suggestions for physical relaxation, e.g., "Close your eyes, get in a comfortable position," etc. (leader adds her/his own relaxation pattern). Then, s/he should say, "Think back about all the hope you had for the future as a child, what career you once thought of, what needs you had in following up on those choices, how you've pursued those goals to date, and what decisions you've made to arrive here."

← 2. Career Exploration (Time: 10-15 minutes)

The members are divided into two smaller groups, and each woman describes what she would like to do with her life, and how that would fulfill certain needs and interests. Each may want to describe her previous fantasy to accomplish this.

← 3. Personal Objectives and Strategies (Time: 20-30 minutes)

Each participant is given a sheet of paper on which she/he is instructed to write some personal objectives and specific strategies for working toward each of them. The leader should encourage the group members to describe at least one simple, short range objective and one long range one. After allowing about ten minutes for filling out the individual sheets, the members form two small groups and share a discussion of their personal objectives.

4. On Focus (Time: 30 minutes)

This exercise has proven to be the most useful and appealing one in this session. In it, each member is given a turn to sit in the "focus" spot. All other members then select for the focus person a top job they could imagine that person achieving sometime in the future, and one job they believe would not meet the personal needs of the focus person. Discussion of those selected jobs is delayed until the round is completed for each person. The purposes of this activity are twofold: to expand one's awareness of personal careers and activities which might satisfy needs, and to give and receive feedback.

Following completion of this exercise, the leaders should summarize the learnings, and, after soliciting both brief verbal and written evaluation of the individual sessions and the program as a whole, adjourn the group.

### Summary

This chapter has focused on another category of structured groups called "life theme groups," which deal with intrapersonal issues vital to living a satisfying life and setting and achieving meaningful goals. Six programs were described, chosen because of their completeness, variety of focus, and developmental aspect.

The major objective of life transition groups is to help persons cope with significant and/or traumatic major changes in their lives that occur suddenly, without planning, or that are undertaken consciously and planfully. The format of these types of groups varies widely from a highly structured series of exercises to practically open-ended discussion sessions. This chapter describes three life transition groups that help people through the upheaval of major life changes.

## Chapter V

### Life Transition Groups

This third category of structured developmental groups has as its central objective the learning of behaviors that will be effective in coping with major changes in life. These changes include those sudden, unanticipated occurrences which seem to "happen to us" as well as those changes that are more self-intentioned and volitional. More specifically, transition groups are structured to help people cope with changes like the loss of a mate or significant other through death, divorce or separation; or other major transitions like relocation, physical impairment, or loss of employment.

Studies over the past ten years of stress-generating life events (Holmes and Rahe, 1967; Masuda and Holmes, 1967; Rahe, et al, 1970; Paykel, et al, 1969, 1971; Aakster, 1974) have chronicled the nature and consequences of individuals' ill-preparedness to handle them. These studies point up the importance of providing resources to help people deal with critical periods of change, particularly in light of the absence of any rituals or systematic means for completing those transitions with a minimum of disability. The majority of major life changes -- at least in American society -- appear to be unanticipated, despite their predictability. Too often, lack of preparation, or avoidance of telling signs of impending change, render people incapable of making the necessary adaptations or coping successfully with the consequences of the upheaval.

The aforementioned studies detail a list of events that are most stress-producing. As noted in the first chapter, these appear to be largely of three types: change due to death, change in a significant personal/social relationship, and changes which have gravely unfavorable economic consequences.

As noted earlier, the structure of transition groups varies widely, and thus there are fewer core components or format similarities. Also, fewer examples of this type of structured group have been developed to date than of either life skills or life theme groups. Life transition groups offer vehicles for achieving personal adjustment that range from a somewhat regimented series of exercises to little more structure than one typically finds in an open-ended personal growth group. In the latter case, the only structure may be possession of a common, identifiable, openly shared transition-goal statement and adoption of some time-limiting parameters for the duration of the group.

Life transition groups have been devised for a number of major life changes. Representative titles among them include, "Resolving Personal Loss," "Leaving the Nest," "Transition Group for Separated and Divorced Persons," "Coping with Change," "Women Alone," and "Search for Fulfillment." Practically all share the emphasis on assisting persons in interpersonal relationship transitions. As with all developmental structured groups, the dual intent is to help individuals meet their immediate need for problem resolution and at the same time learn a coping style that will serve them in future similar situations.

The next part of this chapter presents several representative life transition groups chosen for their completeness and diversity of focus. Life theme groups, too, are presented in narrative style rather than in outline format, as their structure is less formal than that of the life skills groups described in Chapter III.

### Transition Group for Separated and Divorced Persons

The following program is designed to help individuals cope with the adjustment demands of post-partnership following separation or divorce. Its developers are James D. Morris of the University of Idaho Counseling Center in Moscow, Idaho, and Mary R. Prescott, currently of the Department of Counseling and Educational Psychology at New Mexico State University in Las Cruces. Their explanation of this life transition group follows.

This group experience was designed to deal with the changes involved in an individual's returning to single life while still making adjustments to the dissolution of the former partnership. It provides a supportive vehicle for sharing strengths and exploring concerns by separated and divorced persons.

#### Group Format

Experience with this program over the past three years has shown it to be most desirable to have a male-female facilitator team. Such an arrangement enables the often stereotyped thinking which some ex-partners generalize to all members of the opposite sex to be confronted and worked through more satisfactorily. An approximately equal sex distribution

among participants is also desirable, with a total membership of 7 to 12.

The current model involves nine weekly sessions of two hours each.

All would-be group members are screened in an interview with one of the co-leaders. Exclusion from the group is usually based on gravity of therapeutic need, with persons exhibiting extreme neuroticism or pathology being referred for individual assistance. During the screening interview several ground rules are also discussed. These typically include brief explanations of the group process and specific prohibitions against dating other members during the life of the group.

The program is advertised using the campus media and posters or flyers. These notices focus on the concerns of separated or divorced persons and the importance of supportive sharing and therapeutic problem-solving.

Unlike many programs of a similar nature, this kind of transition group uses no specific exercises or games, or a pre-planned format. The sessions are unstructured, and, as most members come to the group eager to discuss their concerns, no contrivance is needed to initiate discussion. The first session is used for repeating ground rules, setting a tone for participation, and sharing expectations for outcomes.

While there is no organized sequence of learning experiences, the authors have noted a pattern of three somewhat distinct states through which the group moves. This flow is perhaps best characterized by a change in the participants' time perspective. Initially, the focus is on the past relationship, its attendant characteristics, and the resultant feelings of

loneliness, guilt, anger, bitterness, resentment, or relief. The first phase could be labeled the "mourning" period, and a thorough exploration of such feelings by each individual consumes the largest portion of the experience, coming to closure usually in five or six sessions. Gains from this phase include realization that others share similar experiences and reactions, and awareness of the various ways of coping used by different members. A major related outcome of this period is for people to understand the ups and downs experienced in the relationship, and to appreciate the demise of the relationship and their role in it. Honest feedback and group cohesion come to characterize these groups early in their existence, and provide the climate for participants to examine openly the components that led to the deterioration of the partnership.

A second stage seems to occur between sessions six and eight wherein the concern shifts to the present and "here and now" matters. During this time, participants usually begin to understand more fully their "unattached" roles and the needs they have as single persons. Part of the group's function at this time is to support each individual's attempts to restructure his/her life style and intrapersonal framework. A major part of that function is accomplished through clarification of values and goals.

A third and final phase occurs when participants begin to shift to a future perspective. In this period group members earnestly move into personal goal-setting in light of their reassessed images of self. Greater insight and self-confidence are notable in this latter stage of group life, as the group solidifies in its support of each member's plans and life

style preferences. At this point, participants are usually ready to move ahead on their own, and the group terminates. Sometimes persons sign up for a second group, but not frequently.

The Personal Orientation Inventory, administered immediately before and after the group experience, has been used as a measure of change. Results have shown significant change in desirable directions.

The consumers of this particular program appear to be atypical of the usual campus counseling agency clientele. The average age is around thirty, and roughly equivalent numbers of males and females enroll. To date, divorced individuals are in the majority, although a substantial number of persons who have broken off a cohabitation relationship apply, as do students who are separated from their marriage partners.

#### Resolving Personal Loss

Another life transition group has been designed to facilitate adjustment to the loss of a significant relationship due to death. This particular program was devised by Gene Knott of the Counseling Center at the University of Rhode Island.

#### Group Format

The general objectives of this group are to assist bereaved individuals with recognition of their loss, to further necessary grief work in a supportive climate, and to create a socially acceptable mourning rite by helping individuals to discuss openly the death of a loved one. The desired ultimate outcome is to aid bereaved persons to cathart emotionally about their loss and its consequences, and to begin the process of resuming

their normal lives with the mutual support of similarly fated "victims."

The group is usually restricted to 6-8 individuals, and a screening interview is held with each prospective member. Criteria for inclusion in the group are a combination of recency of death-loss and relationship of the decedent. In most cases, family members of the deceased and other close loved ones seem to be ready for such a group experience following the passage of three to four weeks after death. Persons with less intimate ties are able to benefit from the group experience sooner after the death. In any event, it is suggested that persons of greatly varying intensity of loss not be placed in the same group. The ability to acknowledge one's grief actively and publicly, called mourning, is essential to the grief resolution process, and may not be immediately possible for persons suffering a deeply significant loss. The present pattern calls for five weekly sessions of two hours each, with each session devoted to a specific topic. Each of the topics is germane to the needs commonly demonstrated by bereaved persons, including those situations where a "retarded" grief reaction is involved. To date, a majority of participants have come to the group after passage of a substantial period of time since the death loss, usually six months or more.

#### SESSION I

Opening activities involve introducing members by name to each other, and having them share, first in dyads, then with the total group, their responses to "Why I'm here," "What I hope to gain," and "Who has died." This part of the session has several related purposes: to

enable members to begin "accommodating" themselves to each other (a sort of warmup); to help members begin to see themselves as "acceptable" persons and members of a group consisting of folks with similar needs and similar experiences; and, to begin to establish an atmosphere that is essentially nonthreatening.

Although the second part of this first session can precede the first, recent experience would indicate that it is more satisfying when the leader's presentation is held till after the ice has been broken.

In the latter half of Session I, the group leader explains (from his/her perspective) the goals of the group, and provides an overview of the five sessions. S/he states the expectations s/he has for both leaders and members, and offers some commentary covering the types of changes members might expect for themselves. The members are encouraged to share their feelings as candidly as comfort allows and to discuss the impact of their death-loss. Unlike many other group experiences, they are also encouraged to talk about their feelings between sessions with non-members, particularly others who know the dead person. Such objectives as "grief shared is grief diminished," and giving "permission" to detach oneself from all but the memory of the dead are facilitated in this manner. In the first meeting then, these issues are openly discussed.

## SESSION II

The leader begins this session by speaking briefly of some of the

most typical reactions of persons bereaved by the death of someone cherished. This can be effectively accomplished by asking each member to react briefly to such experiences as feelings of loneliness, reactions of anger and guilt, the consequences of stigma (social treatment of bereaved by uneasy sympathizers) and deprivation, and, finally, the notion of transition itself, including the goals of detachment and reintegration -- prime goals for each individual within the group. Other typical topics for discussion may include both somatic reactions and economic situations consequent to the loss.

Through this activity group members are given the opportunity to identify their primary grief reactions and to begin to "own" them. Thus, the objectives are several: for members immediately to see the "legitimacy" and commonality of having such emotional responses to their death loss; to provide the leader (and group) with a picture of the range and intensity of these issues for this particular group (they usually vary somewhat; and to gain information so that this and the next two sessions can be organized about the more demanding concerns of the members.

This is a good point at which to give members some "homework," beginning with an exchange of phone numbers among those who desire. The purpose is to enable them to "check" with each other between sessions. All too often the recently bereaved undergo "leper-like" social treatment by people normally close to them, and the concern demonstrated by one person's merely attending to another with as little as a periodic phone

call can be a powerful element in helping to resolve grief. This is especially useful when death is relatively recent, and even more so if the death resulted in someone's being widowed.

### SESSION III

This meeting is begun with a general inquiry about the "homework," members' contacts since the last session, and any notable occurrences a group member may wish to share. Following that, the leader focuses attention on a topic uncovered in the previous session's debriefing. It seems that "anger" and "guilt" feelings are most often the dominant concerns at this juncture of the group's life. In talking openly about such conflicting and (to them) supposedly inimical feelings, members ventilate their feelings and hopefully gain some perspective on understanding them.

The last portion of this third meeting is devoted to a lecturette by the leader on "normal grief reactions," and on time as a key variable in the mourning process. Material for this can be drawn from the work of Lindemann (1944), Bowlby (1961), and Parkes (1972). Often, issues such as the quandary of keeping up with the daily demands of living in the face of immobilizing depression, the ambiguity of the future, and strained or absent social activity, are teased out and discussed at some length in this session. All of this discussion obviously is intended to help bereaved members pursue their grief work.

#### SESSION IV

During this session, the focus is on "stigma" and the social distance and relative isolation that the death of a person confers on anguished survivors. Also, the effects of "deprivation" -- both social and economic -- usually come to the fore. Personal fears of vulnerability and mortality, especially such fears as "cancer contagion" or hereditary defects, should also be dealt with openly in this meeting if they have not surfaced before. These are common, yet will vary from group to group.

In this session, and to a lesser extent in the previous one, the leader may find it useful to employ some "rational contradiction." Disputation of seemingly irrational fears, while not always consoling, will usually make an impact on a bereaved person over time.

This is also the session in which the group begins to "bridge the gap" from being centered on the past (dead) to focusing on the present (the living self and others), and ultimately to planning for the future. One way to facilitate this transition is to use a device like the Gestalt "empty chair" technique for "saying goodbye" to the dead person(s). This has the purpose of helping members to confirm (aloud) the death/absence and thereby gain some semblance of psychological "closure" on that episode.

A typical homework assignment for the final session requires members to return the following week with some well-considered strategies for dealing with their day-to-day needs and wants in light of

the major changes incurred by the death loss. It has proven helpful to encourage members to write down these strategies and share their notes at the next meeting.

#### SESSION V

To begin this final meeting, members form themselves into groups of two to four persons each, the exact composition to be of their own making. Within these small groups, each individual shares his/her plans, with the other member(s) offering supportive critique, suggestions, and encouragement. About two-thirds of the way through the session, the leader reconvenes the total group and solicits voluntary reactions to the discussions held in the subgroups. After briefly processing those, the leader then recapitulates the progress of the group, eliciting members' comments along the way. S/he then urges individuals to recognize and affirm their change/progress to date and their new ability to adjust to life in the face of death, and to note other gains made in the course of the five weeks, including new friends and resources.

Finally, the predictable matter of separation anxiety needs to be dealt with. It has been found useful to respond to this need by asking each member to speak briefly about what the group has meant to her/him, citing specific personal highlights. This activity concludes the group experience. The objectives of this session are to make the transition from group to self as "major resource" in the grieving process, and to enable participants to affirm their directions and goals for "satisfactory survival."

With a target behavior like the process of grieving, there are several options of which the leader should be sensitive throughout. The five session format just outlined, for example, is most useful with persons who are dealing with the death of a family member. However, the general format and many of the specific activities can be used with other types of death-loss. With such incidents as campus suicide or homicide, for example, a modification of this format has been used successfully. In such cases, the students living in close proximity to the dead victim become the target group. Adaptations suitable for their needs include initiation of the group very soon after the incident, and special emphasis on feelings of guilt and personal vulnerability -- typically of paramount concern in such situations. Feedback from group members -- both during the final meeting and at unsolicited times in later weeks and months --- indicates that this structured group experience provides helpful resolution of a number of feelings for the bereaved.

### Women Alone

Transition groups frequently focus on very specific target populations with equally precise characteristics. Such a program is the structured group entitled "Women Alone," which was devised by Susan Hofmann and Floyd C. Kennedy of the Counseling and Career Development Center at Metropolitan State College in Denver, Colorado.

Participation in this group is limited to women who previously have

shared life with a man (married or unmarried) but no longer are in such a relationship, and to single women who have children and may or may not have had such a sharing relationship. Their depiction of the elements and flow of this program follows.

### Group Format

The group is led by a male and female team of facilitators, and group size numbers from eight to ten.

We meet for nine weekly sessions of two hours each; and a small, comfortable room provides an ideal setting. The following set of objectives is shared individually with group members prior to the initial meeting.

1. To provide an understanding and supportive group climate within which each participant may reassess her total life situation (i. e., present circumstances, goals, values, feelings about self, feelings about others, etc.).
2. To provide realistic consultation from both the professional and the lay point of view.
3. To share with others in like circumstances one's own experience and to learn from the experience of others.
4. To provide emotional and intellectual support (i. e., acceptance and reassurance) during this difficult period of her life.
5. To assist mothers without mates to handle the difficult task of rearing children alone.

6. To help the "woman alone" to come to grips with the reality that she is alone and may be alone for a significant period of her life.
7. Within this emotionally secure environment, to help each participant to bring about changes in her life style that potentially will lead to a more satisfying life.

Also, prospective group members are told that we expect to achieve these objectives by: (1) intensive discussion at group meetings of the topics given later (plus other topics suggested by group members), (2) role playing and group exercises, and (3) well thought out changes that each participant will be expected to begin to make in her real life situation.

#### SESSION I

In the first meeting, we begin with an open-ended discussion in which group members (and leaders) share why they have sought this group experience; and what they personally hope to accomplish. This is followed by a discussion of some general group guidelines, the leaders providing a stimulus for this by handing out a brief, one page statement which outlines some common norms for a counseling group.

Once these preliminaries are dealt with, the group starts the first exercise. The objectives of this activity are to enable group members to get to know each other, and to give them a chance to talk briefly

about themselves without interruption. The procedure involves three steps:

- (1) Each group member is asked to talk about herself for five minutes, with an emphasis on "Who I am" and "How I see myself now."
- (2) After each group member speaks, other group members are asked to react to what has been said.
- (3) Discussion of similarities/differences in concerns is encouraged among the total group.

Finally, the leaders assign homework, asking each participant to give some lengthy thought to how she wants to use the group experience over the next eight weeks, and to report back on this. Also, members are instructed to peruse the following list of possible discussion topics and to identify their concerns of personal value and priority from among them for sharing in the next meeting.

#### DISCUSSION TOPICS

1. Feelings about one's self. Self-concept. Do you like you? Do you dislike you? What is good, bad, right, wrong with you? Are these your views? Or someone else's views? What changes would you like to make?
2. So you are now alone -- with or without your children. What does this mean to you? What are your feelings about being alone? Are these feelings and thoughts helpful or hurtful? Should they be changed? Is it acceptable to be selfish?
3. What do you have going for you? What abilities, talents, skills do you have? What have been your achievements and successes? In what roles do you see yourself?

4. Are you more dependent than independent? Are you in control of your life? If not, what must you do to gain control? Coping (just making do) vs. self-determination and growth? Decision-making?
5. Do you work to help support yourself? If not, why not? Are these reasons realistic? Or, are they a "cop-out?" Could you get a job if you tried?
6. What short and long term goals do you have for yourself? If you have no well defined goals, why not? If you do have well defined goals, what are you doing about them?
7. Making changes in one's life-style is risky, but change in your life probably is mandatory. What changes must you make? How much risk can you tolerate? Work, living arrangements, etc.
8. How do you deal with feelings of loneliness, depression, guilt, rejection, anger, etc.?
9. Friends, ex-friends, new friends. Love, sex, and the woman alone. Relations with the ex-. Loving and being loved.
10. You and your children -- expectations, satisfactions, frustrations, etc.
11. Marriage -- remarriage. "I must have a man": fact or fiction?
12. Dealing with the new you and your new life.

## SESSION II

This session begins with sharing of responses to the homework assignments. Based on these reported concerns, the leaders make a list of tentative discussion topics for the next six meetings prior to the third session.

The remainder of this meeting is devoted to having the group members react to the following questions and discuss their responses. The particular objective of each of these questions is listed parenthetically after each one.

- (1) Do you like yourself? (Used to encourage exploration of self-concept.)
- (2) How do you see yourself? What words do you use to describe yourself? (To enable members to recognize how they get to feeling the way they do.)
- (3) How do you think others see you? What differences do you see between questions 2 and 3? Why? (To recognize the differences between internal and external messages relating to self.)
- (4) How do you see other members of this group? (To practice giving and receiving feedback.)

#### SESSIONS III-VIII

For the bulk of the group's remaining meetings the following format is employed. Each meeting begins first with a brief report by each group member of her current feelings, and the relevant issues that are most pressing for her, followed by group discussion of a new area of concern.

The set of members' topical concerns provides the focal point for discussion in the next six meetings. Although these concerns will obviously vary from one group to another, the general flow of topics is typically as follows.

- (1) Members' self-image, its components and sources.
- (2) Various aspects of living alone, use of time, relative dependence, loneliness, etc.

- (3) Dealing with "bad" feelings, such as depression, anxiety, guilt, worthlessness, stressful situations.
- (4) Relationships, dating, sex, remarriage.
- (5) Child-rearing as a woman alone.
- (6) Change and decision-making in our lives.

Throughout these sessions, the group monitors its own process with guidance from the leaders. This guidance includes feedback about individual members and their interactions, as well as an assessment of how the program is proceeding. Also, a major part of the group's activities during these six sessions consists of assignment of several appropriate behavioral tasks. Examples of these assignments include "behavioral rehearsal" tasks such as initiating conversations with new and different people, inviting someone to dinner, practicing more satisfying ways of relating to children -- particularly regarding dating and other adult relationships -- and goal-setting with regard to resolution of practical economic matters like finances and time management.

#### SESSION IX

In this final meeting, which serves as a wrap-up session, two main topics are addressed. First, the group takes a look at what steps each of the members can/should take from this point. Following that, a brief period is given over to evaluating the program via group discussion and completion of a short series of evaluation questions. These questions involve subjective responses from the members relative to the

group experience as a whole, to the leaders, and to suggested revisions  
in format based on perceived gains for themselves.

### Summary

Three life transition groups have been described in this chapter, developed to help persons deal with the upheaval resulting from major changes within their lives.

This chapter summarizes the material presented previously, restates the goals and purposes of the three kinds of structured groups, and outlines the advantages of the structured group approach. It concludes with a look to the future for the structured group movement.

Summary and Future Directions

Summary

In this monograph, we have attempted to present an in-depth look at what has come to be a significant, widespread mental health intervention -- structured groups for facilitating development. These programs are essentially short-term, organized methods for aiding development in two main ways: first, they provide a means for remedying a particular skill deficiency or repairing a psychologically disabling experience; second, they enable helping agents to intervene preventively. In the latter case, the developmental needs that commonly emerge throughout the life span can be anticipated and dealt with. In other words, one need not depend on the elaboration of symptoms to address a client's needs. As Caplan and Grunebaum (1967) noted, this type of primary prevention has the potential for substantially counteracting the harmful influences that, over the long haul, produce emotional dysfunction in the population-at-risk.

These group approaches have several additional advantages. Primary among them is the two-pronged nature of the help offered whereby an individual can find the solution to a particular problem and, simultaneously, develop the skill or ability to resolve similar future quandaries. The general format of the groups optimizes time by limiting the number of sessions and by providing a learning forum for several persons at the same time. Structured groups employ a variety of methodologies and reflect well

two currently valued dimensions of counseling services -- proactivity and accountability. In many ways, the structured developmental group movement incorporates several of the plus factors and few of the weaknesses of the various movements which forged its genesis.

A conceptual schema has been employed to categorize generally the varying character of the different groups. In this schema three main categories of groups are differentiated: (1) life skills groups, which help members to acquire the skills necessary to cope effectively with daily interpersonal transactions; (2) life theme groups, which assist persons to resolve critical intrapersonal issues; and (3) life transition groups, which help individuals to adjust to major life changes. Ideally, successful learnings in both life skills and life theme areas equip individuals to handle necessary life transitions successfully. All three types of groups are goal-directed and time-limited. The establishment of specific goals within a pre-determined time frame helps to make these types of interventions highly accountable strategies which become a viable alternative to so-called "talking" therapies.

The elements of structured developmental groups have been outlined, including consideration of pre-group variables, format, and evaluation. Within each type of structured group, a range of approaches has also been identified, with illustrations of several exemplary programs in each category. Within the life skills groups were included Anxiety Management Training, Assertive Behavior Training, Communication Skills Workshop, Couples Enrichment Group, Decision-Making Group, Life/Work

Planning, Interpersonal Skills, Parenting Skills Group, and Profile Group for Weight Control. Representative life theme groups included Clarifying Personal Values, Human Sexuality, Loneliness and Self-Betrayal Workshop, Raising Male Consciousness, Self-Esteem Workshop, and a program entitled Woman Aware. Lastly, examples of life transition groups were the Transition Group for Separated/Divorced Persons, Resolving Personal Loss Workshop, and the Woman Alone Program. A variety of structured developmental groups is continually under development, and the above can thus be considered a representative rather than an exhaustive list. It is hoped, in addition, that from reading this monograph, practitioners will be able to develop and expand from the descriptions presented and design their own locally relevant structured groups.

#### Future Directions

Anticipating directions which the burgeoning structured group movement will take in the future is perhaps best done by extrapolating from the present. Many of these types of programs are already incorporated into the formal school curriculum at various levels. Some have been expanded into full term courses and are being offered for credit in colleges and universities. Still other examples can be found in middle and secondary schools where they frequently appear as mini-courses. Then, too, entire programs have evolved in recent years which integrate deliberate psychological or affective education approaches throughout the curriculum. In addition, groups of the type described herein are becoming

more common offerings in community agencies. As the value of this alternate mode of helping is realized by more mental health personnel, it seems reasonable to expect that structured developmental groups will become a widely employed therapeutic strategy throughout the helping professions. Current professional involvement in this area reflects the high level of consumer response to programs of this type, and each has, in its turn, become the impetus for expansion of the other.

However, as with many of the helping interventions, evaluation and empirical research lag behind the practice. A notable exception to this situation is found with life skills groups, wherein a reasonable amount of research data has been amassed in recent years. Needless to say, evaluation of all of these programs needs more consistent and sophisticated attention.

A survey of the entire movement at this time reveals a goal emerging relative to future application of structured developmental groups. We are already enmeshed in "playing catch-up." Because of heightening client interest, we can readily anticipate increased demand for programs like these at all levels of adolescent education, reaching over into adulthood. Our objective then is to seek implementation of these kinds of groups at earlier points in human development than is presently the case.

It has been stated that consumer response to these forms of intervention has already begun to foster momentum for growth of this movement. Although no single intervention mode will ever universally suffice, structured

groups for facilitating development are increasingly becoming major tools in the mental health professional's repertoire of therapeutic and educational approaches to developmental change.

#### Summary

Structured groups for facilitating development are only one means of dealing with common problems, but they have developed over the past years into a significant intervention technique. As more professionals are made aware of the value of this method of helping, it seems reasonable to expect that structured developmental groups will become a widely employed therapeutic strategy throughout the helping professions.

APPENDIX

The following is a list of program contributors and their complete mailing addresses.

Life Skills

Anxiety Management Training

Barry McCarthy  
Counseling and Testing Center  
The American University  
Massachusetts and Nebraska Avenues  
Washington, D.C.

Assertion Skills

Dolph Printz

## Chapter V

### Life Transition Groups

This third category of structured developmental groups has as its central objective the learning of behaviors that will be effective in coping with major changes in life. These changes include those sudden, unanticipated occurrences which seem to "happen to us" as well as those changes that are more self-intentioned and volitional. More specifically, transition groups are structured to help people cope with changes like the loss of a mate or significant other through death, divorce or separation; or other major transitions like relocation, physical impairment, or loss of employment.

Studies over the past ten years of stress-generating life events (Holmes and Rahe, 1967; Masuda and Holmes, 1967; Rahe, et al, 1970; Paykel, et al, 1969, 1971; Aakster, 1974) have chronicled the nature and consequences of individuals' ill-preparedness to handle them. These studies point up the importance of providing resources to help people deal with critical periods of change, particularly in light of the absence of any rituals or systematic means for completing those transitions with a minimum of disability. The majority of major life changes -- at least in American society -- appear to be unanticipated, despite their predictability. Too often, lack of preparation, or avoidance of telling signs of impending change, render people incapable of making the necessary adaptations or coping successfully with the consequences of the upheaval.

## Focus of Life Transition Groups

The aforementioned studies detail a list of events that are most stress-producing. As noted in the first chapter, these appear to be largely of three types: change due to death, change in a significant personal/social relationship, and changes which have gravely unfavorable economic consequences.

As noted earlier, the structure of transition groups varies widely, and thus there are fewer core components or format similarities. Also, fewer examples of this type of structured group have been developed to date than of either life skills or life theme groups. Life transition groups offer vehicles for achieving personal adjustment that range from a somewhat regimented series of exercises to little more structure than one typically finds in an open-ended personal growth group. In the latter case, the only structure may be possession of a common, identifiable, openly shared transition-goal statement and adoption of some time-limiting parameters for the duration of the group.

Life transition groups have been devised for a number of major life changes. Representative titles among them include, "Resolving Personal Loss," "Leaving the Nest," "Transition Group for Separated and Divorced Persons," "Coping with Change," "Women Alone," and "Search for Fulfillment." Practically all share the emphasis on assisting persons in interpersonal relationship transitions. As with all developmental structured groups, the dual intent is to help individuals meet their immediate need for problem resolution and at the same time learn a coping style that will serve them in future similar situations.

The next part of this chapter presents several representative life transition groups chosen for their completeness and diversity of focus. Life theme groups, too, are presented in narrative style rather than in outline format, as their structure is less formal than that of the life skills groups described in Chapter III.

Transition Group for Separated and Divorced Persons

The following program is designed to help individuals cope with the adjustment demands of post-partnership following separation or divorce. Its developers are James D. Morris of the University of Idaho Counseling Center in Moscow, Idaho, and Mary R. Prescott, currently of the Department of Counseling and Educational Psychology at New Mexico State University in Las Cruces. Their explanation of this life transition group follows.

This group experience was designed to deal with the changes involved in an individual's returning to single life while still making adjustments to the dissolution of the former partnership. It provides a supportive vehicle for sharing strengths and exploring concerns by separated and divorced persons.

Group Format

Experience with this program over the past three years has shown it to be most desirable to have a male-female facilitator team. Such an arrangement enables the often stereotyped thinking which some ex-partners generalize to all members of the opposite sex to be confronted and worked through more satisfactorily. An approximately equal sex distribution

among participants is also desirable, with a total membership of 7 to 12.

The current model involves nine weekly sessions of two hours each.

All would-be group members are screened in an interview with one of the co-leaders. Exclusion from the group is usually based on gravity of therapeutic need, with persons exhibiting extreme neuroticism or pathology being referred for individual assistance. During the screening interview several ground rules are also discussed. These typically include brief explanations of the group process and specific prohibitions against dating other members during the life of the group.

The program is advertised using the campus media and posters or flyers. These notices focus on the concerns of separated or divorced persons and the importance of supportive sharing and therapeutic problem-solving.

Unlike many programs of a similar nature, this kind of transition group uses no specific exercises or games, or a pre-planned format. The sessions are unstructured, and, as most members come to the group eager to discuss their concerns, no contrivance is needed to initiate discussion. The first session is used for repeating ground rules, setting a tone for participation, and sharing expectations for outcomes.

While there is no organized sequence of learning experiences, the authors have noted a pattern of three somewhat distinct states through which the group moves. This flow is perhaps best characterized by a change in the participants' time perspective. Initially, the focus is on the past relationship, its attendant characteristics, and the resultant feelings of

loneliness, guilt, anger, bitterness, resentment, or relief. The first phase could be labeled the "mourning" period, and a thorough exploration of such feelings by each individual consumes the largest portion of the experience, coming to closure usually in five or six sessions. Gains from this phase include realization that others share similar experiences and reactions, and awareness of the various ways of coping used by different members. A major related outcome of this period is for people to understand the ups and downs experienced in the relationship, and to appreciate the demise of the relationship and their role in it. Honest feedback and group cohesion come to characterize these groups early in their existence, and provide the climate for participants to examine openly the components that led to the deterioration of the partnership.

A second stage seems to occur between sessions six and eight wherein the concern shifts to the present and "here and now" matters. During this time, participants usually begin to understand more fully their "unattached" roles and the needs they have as single persons. Part of the group's function at this time is to support each individual's attempts to restructure his/her life style and intrapersonal framework. A major part of that function is accomplished through clarification of values and goals.

A third and final phase occurs when participants begin to shift to a future perspective. In this period group members earnestly move into personal goal-setting in light of their reassessed images of self. Greater insight and self-confidence are notable in this latter stage of group life, as the group solidifies in its support of each member's plans and life

style preferences. At this point, participants are usually ready to move ahead on their own, and the group terminates. Sometimes persons sign up for a second group, but not frequently.

The Personal Orientation Inventory, administered immediately before and after the group experience, has been used as a measure of change. Results have shown significant change in desirable directions.

The consumers of this particular program appear to be atypical of the usual campus counseling agency clientele. The average age is around thirty, and roughly equivalent numbers of males and females enroll. To date, divorced individuals are in the majority, although a substantial number of persons who have broken off a cohabitation relationship apply, as do students who are separated from their marriage partners.

#### Resolving Personal Loss

Another life transition group has been designed to facilitate adjustment to the loss of a significant relationship due to death. This particular program was devised by Gene Knott of the Counseling Center at the University of Rhode Island.

#### Group Format

The general objectives of this group are to assist bereaved individuals with recognition of their loss, to further necessary grief work in a supportive climate, and to create a socially acceptable mourning rite by helping individuals to discuss openly the death of a loved one. The desired ultimate outcome is to aid bereaved persons to cathart emotionally about their loss and its consequences, and to begin the process of resuming

their normal lives with the mutual support of similarly fated "victims."

The group is usually restricted to 6-8 individuals, and a screening interview is held with each prospective member. Criteria for inclusion in the group are a combination of recency of death-loss and relationship of the decedent. In most cases, family members of the deceased and other close loved ones seem to be ready for such a group experience following the passage of three to four weeks after death. Persons with less intimate ties are able to benefit from the group experience sooner after the death. In any event, it is suggested that persons of greatly varying intensity of loss not be placed in the same group. The ability to acknowledge one's grief actively and publicly, called mourning, is essential to the grief resolution process, and may not be immediately possible for persons suffering a deeply significant loss. The present pattern calls for five weekly sessions of two hours each, with each session devoted to a specific topic. Each of the topics is germane to the needs commonly demonstrated by bereaved persons, including those situations where a "retarded" grief reaction is involved. To date, a majority of participants have come to the group after passage of a substantial period of time since the death loss, usually six months or more.

#### SESSION I

Opening activities involve introducing members by name to each other, and having them share, first in dyads, then with the total group, their responses to "Why I'm here," "What I hope to gain." and "Who has died." This part of the session has several related purposes: to

enable members to begin "accommodating" themselves to each other (a sort of warmup); to help members begin to see themselves as "acceptable" persons and members of a group consisting of folks with similar needs and similar experiences; and, to begin to establish an atmosphere that is essentially nonthreatening.

Although the second part of this first session can precede the first, recent experience would indicate that it is more satisfying when the leader's presentation is held till after the ice has been broken.

In the latter half of Session I, the group leader explains (from his/her perspective) the goals of the group, and provides an overview of the five sessions. S/he states the expectations s/he has for both leaders and members, and offers some commentary covering the types of changes members might expect for themselves. The members are encouraged to share their feelings as candidly as comfort allows and to discuss the impact of their death-loss. Unlike many other group experiences, they are also encouraged to talk about their feelings between sessions with non-members, particularly others who know the dead person. Such objectives as "grief shared is grief diminished," and giving "permission" to detach oneself from all but the memory of the dead are facilitated in this manner. In the first meeting then, these issues are openly discussed.

## SESSION II

The leader begins this session by speaking briefly of some of the

most typical reactions of persons bereaved by the death of someone cherished. This can be effectively accomplished by asking each member to react briefly to such experiences as feelings of loneliness, reactions of anger and guilt, the consequences of stigma (social treatment of bereaved by uneasy sympathizers) and deprivation, and, finally, the notion of transition itself, including the goals of detachment and reintegration -- prime goals for each individual within the group. Other typical topics for discussion may include both somatic reactions and economic situations consequent to the loss.

Through this activity group members are given the opportunity to identify their primary grief reactions and to begin to "own" them. Thus, the objectives are several: for members immediately to see the "legitimacy" and commonality of having such emotional responses to their death loss; to provide the leader (and group) with a picture of the range and intensity of these issues for this particular group (they usually vary somewhat; and to gain information so that this and the next two sessions can be organized about the more demanding concerns of the members.

This is a good point at which to give members some "homework," beginning with an exchange of phone numbers among those who desire. The purpose is to enable them to "check" with each other between sessions. All too often the recently bereaved undergo "leper-like" social treatment by people normally close to them, and the concern demonstrated by one person's merely attending to another with as little as a periodic phone

call can be a powerful element in helping to resolve grief. This is especially useful when death is relatively recent, and even more so if the death resulted in someone's being widowed.

### SESSION III

This meeting is begun with a general inquiry about the "home-work," members' contacts since the last session, and any notable occurrences a group member may wish to share. Following that, the leader focuses attention on a topic uncovered in the previous session's debriefing. It seems that "anger" and "guilt" feelings are most often the dominant concerns at this juncture of the group's life. In talking openly about such conflicting and (to them) supposedly inimical feelings, members ventilate their feelings and hopefully gain some perspective on understanding them.

The last portion of this third meeting is devoted to a lecturette by the leader on "normal grief reactions," and on time as a key variable in the mourning process. Material for this can be drawn from the work of Lindemann (1944), Bowlby (1961), and Parkes (1972). Often, issues such as the quandary of keeping up with the daily demands of living in the face of immobilizing depression, the ambiguity of the future, and strained or absent social activity, are teased out and discussed at some length in this session. All of this discussion obviously is intended to help bereaved members pursue their grief work.

#### SESSION IV

During this session, the focus is on "stigma" and the social distance and relative isolation that the death of a person confers on anguished survivors. Also, the effects of "deprivation" -- both social and economic -- usually come to the fore. Personal fears of vulnerability and mortality, especially such fears as "cancer contagion" or hereditary defects, should also be dealt with openly in this meeting if they have not surfaced before. These are common, yet will vary from group to group.

In this session, and to a lesser extent in the previous one, the leader may find it useful to employ some "rational contradiction." Disputation of seemingly irrational fears, while not always consoling, will usually make an impact on a bereaved person over time.

This is also the session in which the group begins to "bridge the gap" from being centered on the past (dead) to focusing on the present (the living self and others), and ultimately to planning for the future. One way to facilitate this transition is to use a device like the Gestalt "empty chair" technique for "saying goodbye" to the dead person(s). This has the purpose of helping members to confirm (aloud) the death/absence and thereby gain some semblance of psychological "closure" on that episode.

A typical homework assignment for the final session requires members to return the following week with some well-considered strategies for dealing with their day-to-day needs and wants in light of

the major changes incurred by the death loss. It has proven helpful to encourage members to write down these strategies and share their notes at the next meeting.

#### SESSION V

To begin this final meeting, members form themselves into groups of two to four persons each, the exact composition to be of their own making. Within these small groups, each individual shares his/her plans, with the other member(s) offering supportive critique, suggestions, and encouragement. About two-thirds of the way through the session, the leader reconvenes the total group and solicits voluntary reactions to the discussions held in the subgroups. After briefly processing those, the leader then recapitulates the progress of the group, eliciting members' comments along the way. S/he then urges individuals to recognize and affirm their change/progress to date and their new ability to adjust to life in the face of death, and to note other gains made in the course of the five weeks, including new friends and resources.

Finally, the predictable matter of separation anxiety needs to be dealt with. It has been found useful to respond to this need by asking each member to speak briefly about what the group has meant to her/him, citing specific personal highlights. This activity concludes the group experience. The objectives of this session are to make the transition from group to self as "major resource" in the grieving process, and to enable participants to affirm their directions and goals for "satisfactory survival."

With a target behavior like the process of grieving, there are several options of which the leader should be sensitive throughout. The five session format just outlined, for example, is most useful with persons who are dealing with the death of a family member. However, the general format and many of the specific activities can be used with other types of death-loss. With such incidents as campus suicide or homicide, for example, a modification of this format has been used successfully. In such cases, the students living in close proximity to the dead victim become the target group. Adaptations suitable for their needs include initiation of the group very soon after the incident, and special emphasis on feelings of guilt and personal vulnerability -- typically of paramount concern in such situations. Feedback from group members -- both during the final meeting and at unsolicited times in later weeks and months -- indicates that this structured group experience provides helpful resolution of a number of feelings for the bereaved.

### Women Alone

Transition groups frequently focus on very specific target populations with equally precise characteristics. Such a program is the structured group entitled "Women Alone," which was devised by Susan Hofmann and Floyd C. Kennedy of the Counseling and Career Development Center at Metropolitan State College in Denver, Colorado.

Participation in this group is limited to women who previously have

shared life with a man (married or unmarried) but no longer are in such a relationship, and to single women who have children and may or may not have had such a sharing relationship. Their depiction of the elements and flow of this program follows.

### Group Format

The group is led by a male and female team of facilitators, and group size numbers from eight to ten.

We meet for nine weekly sessions of two hours each; and a small, comfortable room provides an ideal setting. The following set of objectives is shared individually with group members prior to the initial meeting.

1. To provide an understanding and supportive group climate within which each participant may reassess her total life situation (i. e., present circumstances, goals, values, feelings about self, feelings about others, etc.).
2. To provide realistic consultation from both the professional and the lay point of view.
3. To share with others in like circumstances one's own experience and to learn from the experience of others.
4. To provide emotional and intellectual support (i. e., acceptance and reassurance) during this difficult period of her life.
5. To assist mothers without mates to handle the difficult task of rearing children alone.

6. To help the "woman alone" to come to grips with the reality that she is alone and may be alone for a significant period of her life.
7. Within this emotionally secure environment, to help each participant to bring about changes in her life style that potentially will lead to a more satisfying life.

Also, prospective group members are told that we expect to achieve these objectives by: (1) intensive discussion at group meetings of the topics given later (plus other topics suggested by group members), (2) role playing and group exercises, and (3) well thought out changes that each participant will be expected to begin to make in her real life situation.

#### SESSION I

In the first meeting, we begin with an open-ended discussion in which group members (and leaders) share why they have sought this group experience; and what they personally hope to accomplish. This is followed by a discussion of some general group guidelines, the leaders providing a stimulus for this by handing out a brief, one page statement which outlines some common norms for a counseling group.

Once these preliminaries are dealt with, the group starts the first exercise. The objectives of this activity are to enable group members to get to know each other, and to give them a chance to talk briefly

about themselves without interruption. The procedure involves three steps:

- (1) Each group member is asked to talk about herself for five minutes, with an emphasis on "Who I am" and "How I see myself now."
- (2) After each group member speaks, other group members are asked to react to what has been said.
- (3) Discussion of similarities/differences in concerns is encouraged among the total group.

Finally, the leaders assign homework, asking each participant to give some lengthy thought to how she wants to use the group experience over the next eight weeks, and to report back on this. Also, members are instructed to peruse the following list of possible discussion topics and to identify their concerns of personal value and priority from among them for sharing in the next meeting.

#### DISCUSSION TOPICS

1. Feelings about one's self. Self-concept. Do you like you? Do you dislike you? What is good, bad, right, wrong with you? Are these your views? Or someone else's views? What changes would you like to make?
2. So you are now alone -- with or without your children. What does this mean to you? What are your feelings about being alone? Are these feelings and thoughts helpful or hurtful? Should they be changed? Is it acceptable to be selfish?
3. What do you have going for you? What abilities, talents, skills do you have? What have been your achievements and successes? In what roles do you see yourself?

4. Are you more dependent than independent? Are you in control of your life? If not, what must you do to gain control? Coping (just making do) vs. self-determination and growth? Decision-making?
5. Do you work to help support yourself? If not, why not? Are these reasons realistic? Or, are they a "cop-out?" Could you get a job if you tried?
6. What short and long term goals do you have for yourself? If you have no well defined goals, why not? If you do have well defined goals, what are you doing about them?
7. Making changes in one's life-style is risky, but change in your life probably is mandatory. What changes must you make? How much risk can you tolerate? Work, living arrangements, etc.
8. How do you deal with feelings of loneliness, depression, guilt, rejection, anger, etc.?
9. Friends, ex-friends, new friends. Love, sex, and the woman alone. Relations with the ex-. Loving and being loved.
10. You and your children -- expectations, satisfactions, frustrations, etc.
11. Marriage -- remarriage. "I must have a man": fact or fiction?
12. Dealing with the new you and your new life.

## SESSION II

This session begins with sharing of responses to the homework assignments. Based on these reported concerns, the leaders make a list of tentative discussion topics for the next six meetings prior to the third session.

The remainder of this meeting is devoted to having the group members react to the following questions and discuss their responses. The particular objective of each of these questions is listed parenthetically after each one.

- (1) Do you like yourself? (Used to encourage exploration of self-concept.)
- (2) How do you see yourself? What words do you use to describe yourself? (To enable members to recognize how they get to feeling the way they do.)
- (3) How do you think others see you? What differences do you see between questions 2 and 3? Why? (To recognize the differences between internal and external messages relating to self.)
- (4) How do you see other members of this group? (To practice giving and receiving feedback.)

#### SESSIONS IX-VIII

For the bulk of the group's remaining meetings the following format is employed. Each meeting begins first with a brief report by each group member of her current feelings, and the relevant issues that are most pressing for her, followed by group discussion of a new area of concern.

The set of members' topical concerns provides the focal point for discussion in the next six meetings. Although these concerns will obviously vary from one group to another, the general flow of topics is typically as follows.

- (1) Members' self-image, its components and sources.
- (2) Various aspects of living alone, use of time, relative dependence, loneliness, etc.

- (3) Dealing with "bad" feelings, such as depression, anxiety, guilt, worthlessness, stressful situations.
- (4) Relationships, dating, sex, remarriage.
- (5) Child-rearing as a woman alone.
- (6) Change and decision-making in our lives.

Throughout these sessions, the group monitors its own process with guidance from the leaders. This guidance includes feedback about individual members and their interactions, as well as an assessment of how the program is proceeding. Also, a major part of the group's activities during these six sessions consists of assignment of several appropriate behavioral tasks. Examples of these assignments include "behavioral rehearsal" tasks such as initiating conversations with new and different people, inviting someone to dinner, practicing more satisfying ways of relating to children -- particularly regarding dating and other adult relationships -- and goal-setting with regard to resolution of practical economic matters like finances and time management.

#### SESSION IX

In this final meeting, which serves as a wrap-up session, two main topics are addressed. First, the group takes a look at what steps each of the members can/should take from this point. Following that, a brief period is given over to evaluating the program via group discussion and completion of a short series of evaluation questions. These questions involve subjective responses from the members relative to the

group experience as a whole, to the leaders, and to suggested revisions  
in format based on perceived gains for themselves.

### Summary

Three life transition groups have been described in this chapter, developed to help persons deal with the upheaval resulting from major changes within their lives.

This chapter summarizes the material presented previously, restates the goals and purposes of the three kinds of structured groups, and outlines the advantages of the structured group approach. It concludes with a look to the future for the structured group movement.

Summary and Future Directions

Summary

In this monograph, we have attempted to present an in-depth look at what has come to be a significant, widespread mental health intervention -- structured groups for facilitating development. These programs are essentially short-term, organized methods for aiding development in two main ways: first, they provide a means for remedying a particular skill deficiency or repairing a psychologically disabling experience; second, they enable helping agents to intervene preventively. In the latter case, the developmental needs that commonly emerge throughout the life span can be anticipated and dealt with. In other words, one need not depend on the elaboration of symptoms to address a client's needs. As Caplan and Grunebaum (1967) noted, this type of primary prevention has the potential for substantially counteracting the harmful influences that, over the long haul, produce emotional dysfunction in the population-at-risk.

These group approaches have several additional advantages. Primary among them is the two-pronged nature of the help offered whereby an individual can find the solution to a particular problem and, simultaneously, develop the skill or ability to resolve similar future quandaries. The general format of the groups optimizes time by limiting the number of sessions and by providing a learning forum for several persons at the same time. Structured groups employ a variety of methodologies and reflect well

two currently valued dimensions of counseling services -- proactivity and accountability. In many ways, the structured developmental group movement incorporates several of the plus factors and few of the weaknesses of the various movements which forged its genesis.

A conceptual schema has been employed to categorize generally the varying character of the different groups. In this schema three main categories of groups are differentiated: (1) life skills groups, which help members to acquire the skills necessary to cope effectively with daily interpersonal transactions; (2) life theme groups, which assist persons to resolve critical intrapersonal issues; and (3) life transition groups, which help individuals to adjust to major life changes. Ideally, successful learnings in both life skills and life theme areas equip individuals to handle necessary life transitions successfully. All three types of groups are goal-directed and time-limited. The establishment of specific goals within a pre-determined time frame helps to make these types of interventions highly accountable strategies which become a viable alternative to so-called "talking" therapies.

The elements of structured developmental groups have been outlined, including consideration of pre-group variables, format, and evaluation. Within each type of structured group, a range of approaches has also been identified, with illustrations of several exemplary programs in each category. Within the life skills groups were included Anxiety Management Training, Assertive Behavior Training, Communication Skills Workshop, Couples Enrichment Group, Decision-Making Group, Life/Work

Planning, Interpersonal Skills, Parenting Skills Group, and Profile Group for Weight Control. Representative life theme groups included Clarifying Personal Values, Human Sexuality, Loneliness and Self-Betrayal Workshop, Raising Male Consciousness, Self-Esteem Workshop, and a program entitled Woman Aware. Lastly, examples of life transition groups were the Transition Group for Separated/Divorced Persons, Resolving Personal Loss Workshop, and the Woman Alone Program. A variety of structured developmental groups is continually under development, and the above can thus be considered a representative rather than an exhaustive list. It is hoped, in addition, that from reading this monograph, practitioners will be able to develop and expand from the descriptions presented and design their own locally relevant structured groups.

#### Future Directions

Anticipating directions which the burgeoning structured group movement will take in the future is perhaps best done by extrapolating from the present. Many of these types of programs are already incorporated into the formal school curriculum at various levels. Some have been expanded into full term courses and are being offered for credit in colleges and universities. Still other examples can be found in middle and secondary schools where they frequently appear as mini-courses. Then, too, entire programs have evolved in recent years which integrate deliberate psychological or affective education approaches throughout the curriculum. In addition, groups of the type described herein are becoming

more common offerings in community agencies. As the value of this alternate mode of helping is realized by more mental health personnel, it seems reasonable to expect that structured developmental groups will become a widely employed therapeutic strategy throughout the helping professions. Current professional involvement in this area reflects the high level of consumer response to programs of this type, and each has, in its turn, become the impetus for expansion of the other.

However, as with many of the helping interventions, evaluation and empirical research lag behind the practice. A notable exception to this situation is found with life skills groups, wherein a reasonable amount of research data has been amassed in recent years. Needless to say, evaluation of all of these programs needs more consistent and sophisticated attention.

A survey of the entire movement at this time reveals a goal emerging relative to future application of structured developmental groups. We are already enmeshed in "playing catch-up." Because of heightening client interest, we can readily anticipate increased demand for programs like these at all levels of adolescent education, reaching over into adulthood. Our objective then is to seek implementation of these kinds of groups at earlier points in human development than is presently the case.

It has been stated that consumer response to these forms of intervention has already begun to foster momentum for growth of this movement. Although no single intervention mode will ever universally suffice, structured

groups for facilitating development are increasingly becoming major tools in the mental health professional's repertoire of therapeutic and educational approaches to developmental change.

#### Summary

Structured groups for facilitating development are only one means of dealing with common problems, but they have developed over the past years into a significant intervention technique. As more professionals are made aware of the value of this method of helping, it seems reasonable to expect that structured developmental groups will become a widely employed therapeutic strategy throughout the helping professions.

## APPENDIX

The following is a list of program contributors and their complete mailing addresses.

### Life Skills

#### Anxiety Management Training

Barry McCarthy  
Counseling and Testing Center  
The American University  
Massachusetts and Nebraska Avenues  
Washington, D.C.

#### Assertion Skills

Dolph Printz  
Counseling Center  
University of Rhode Island  
Kingston, Rhode Island 02881

#### Communication Skills Workshop

University Counseling Center  
Colorado State University  
Fort Collins, Colorado

#### Couples Enrichment

Dick Blouch  
Counseling Center  
Millersville State College  
Lancaster, Pennsylvania

#### Decision-Making Group

Si Clifton and Bob Nejedlo  
Counseling Center  
Northern Illinois University  
DeKalb, Illinois 60115

#### PATH

Howard Figler  
Counseling Center  
Dickinson College  
Carlisle, Pennsylvania 17013

Friendship Initiating and Development Group

Michale C. Menefee  
Counseling and Psychological Services Center  
The University of Texas at Austin  
Austin, Texas 78712

Parenting Skills Group

Lester Pearlstein  
Counseling Center  
University of Virginia  
Charlottesville, Virginia

Profile Group for Weight Control

Robert B. Mandell  
Coordinator of Health and Counseling  
The University of Texas at Dallas  
Dallas, Texas

Life Themes

Clarifying Personal Values

Judy A. Marsh  
20 Partridge St.  
Portsmouth, New Hampshire

Human Sexuality

William H. Jones  
Office of Counseling Services  
Gettysburg College  
Gettysburg, Pennsylvania 17325

Loneliness and Self-Betrayal

Victor Atyas  
Counseling Center  
University of Rhode Island  
Kingston, Rhode Island 02881

Raising the Male Consciousness

Richard C. Nelson  
Allen E. Segrist  
Counseling and Personnel Services  
Department of Education  
Purdue University  
West Lafayette, Indiana 47907

Self-Esteem

Stanley Pavey  
1551 North Murray Dr.  
Los Angeles CA 90026

Women Aware

Lu Ann Keating  
Counseling and Student Development Center  
Northern Illinois University  
DeKalb, Illinois 60115

Life Transitions

Transition Group for Separated/Divorced Persons

James D. Morris  
Student Counseling Center  
University of Idaho  
Moscow, Idaho 83843

Mary R. Prescott  
Department of Counseling and Educational  
Psychology  
New Mexico State University  
Las Cruces, New Mexico 88003

Resolving Personal Loss

J. Eugene Knott  
Counseling Center  
University of Rhode Island  
Kingston, Rhode Island 02881

Women Alone

Susan Hofmann  
Floyd C. Kennedy  
Counseling and Career Development Center--Box 5  
Metropolitan State College  
250 W. 14th Avenue  
Denver, Colorado 80204
