

**GRADUATE STUDENT SERIES IN PHYSICS**

Series Editor: Professor Douglas F Brewer, M.A., D.Phil.  
*Professor of Experimental Physics, University of Sussex*

---

**SUPERFLUIDITY  
AND  
SUPERCONDUCTIVITY**

DAVID R TILLEY

JOHN TILLEY

*Department of Physics  
University of Essex*

*Third edition*

Institute of Physics Publishing  
Bristol and Philadelphia

# CONTENTS

Preface to the third edition	ix
<b>1 Superfluids: an introduction</b>	<b>1</b>
1.1 Basic properties of superfluid $^4\text{He}$	1
1.2 Basic properties of superconductors	11
1.3 Basic properties of superfluid $^3\text{He}$	26
Problems	29
References	29
<b>2 Condensates and excitations</b>	<b>31</b>
2.1 Introduction	31
2.2 The Bose–Einstein condensation	31
2.3 The condensate wave function	38
2.4 Elementary excitations and superfluidity	41
2.5 Elementary excitations in He II and their interactions	53
2.6 The search for the condensate in He II	62
2.7 Elementary excitations in superconductors	66
2.8 Elementary excitation spectrum of superfluid $^3\text{He}$	69
Problems	70
References	71
<b>3 Helium II: the two-fluid model</b>	<b>73</b>
3.1 Introduction	73
3.2 Basic superfluidity	74
3.3 The equation for superfluid flow	77
3.4 Motion of the normal fluid	81
3.5 Generalised two-fluid model	83
3.6 The flow of helium II in channels	86
3.7 Liquid helium films	92
3.8 The fountain effect and heat transport in helium II	106
3.9 The propagation of sound in helium II	108
Problems	115
References	115

<b>4</b>	<b>Microscopic theory of superconductivity</b>	<b>119</b>
4.1	Introduction	119
4.2	The BCS ground state	122
4.3	BCS excited states at $T = 0$	128
4.4	BCS theory at nonzero temperature	131
4.5	Summary and discussion	134
	Appendix	136
	Problems	138
	References	139
<b>5</b>	<b>Superconductors: electrodynamics and tunnelling</b>	<b>140</b>
5.1	Introduction	140
5.2	Microwave skin effect in a normal metal	140
5.3	London equations for a superconductor	145
5.4	Pippard's equation	150
5.5	Superconductors in microwave and infrared fields	152
5.6	Electron tunnelling	154
5.7	Non-equilibrium superconductivity	161
5.8	Tunnel junctions in phonon spectroscopy	165
	Problems	168
	References	169
<b>6</b>	<b>Vortex states</b>	<b>171</b>
6.1	Quantisation of circulation	171
6.2	Quantised vortices in He II	180
6.3	Quantised vortices in superconductors	206
6.4	A comparison of He II and superconducting vortices	224
6.5	Dynamics of vortex states	225
	Problems	253
	References	256
<b>7</b>	<b>Josephson effects</b>	<b>260</b>
7.1	Introduction	260
7.2	Basic equations	261
7.3	DC current, magnetic field dependence and SQUIDS	263
7.4	DC current–voltage characteristics	273
7.5	AC effects	275
7.6	The search for Josephson effects in liquid helium	282
	Problems	290
	References	291
<b>8</b>	<b>Ginzburg–Landau theory</b>	<b>294</b>
8.1	Introduction	294
8.2	The Landau theory of second-order phase transitions	295

8.3	Ginzburg–Landau equations	298
8.4	Second-order critical fields	303
8.5	Abrikosov vortex lattice	312
8.6	Relation of GL theory to microscopic theory	318
8.7	Ginzburg–Pitaevskii equations for helium II	321
8.8	Broken symmetry	325
8.9	Fluctuation effects	327
	Problems	330
	References	334
<b>9</b>	<b>Superfluidity in liquid <math>^3\text{He}</math></b>	<b>336</b>
9.1	Introduction	336
9.2	Normal $^3\text{He}$ as a Fermi liquid	339
9.3	Spin triplet pairing	348
9.4	Early experimental results on superfluid $^3\text{He}$	358
9.5	Oriental effects: NMR and textures	366
9.6	Sound attenuation and order parameter collective modes	373
9.7	Analogies with other superfluids	377
	Appendix	393
	References	395
<b>10</b>	<b>Superfluidity and superconductivity in other systems</b>	<b>399</b>
10.1	Introduction	399
10.2	Superconductivity and magnetic ordering	399
10.3	Superconductivity in organic solids	406
10.4	Heavy-fermion superconductivity	410
10.5	Superconducting superlattices	412
10.6	Finite nuclei	413
10.7	Neutron stars	414
10.8	Spin-polarised hydrogen	419
	Problem	421
	References	422
<b>11</b>	<b>High-<math>T_c</math> superconductors</b>	<b>424</b>
11.1	Introduction	424
11.2	Resistive transitions and crystal structures	427
11.3	Critical fields and critical currents	433
11.4	Flux quantisation and vortex lattice	442
11.5	Properties related to the energy gap	445
11.6	Magnetic ordering	451
11.7	Isotope effect	454
11.8	Conclusions	455
	References	457
	Index	458
