## CONTENTS

---

<b>Foreword—Jean-Marie Lehn</b>	ix
<b>Preface—Enrique García-España</b>	xi
<b>Contributors</b>	xiii
<b>1. Physical Factors in Anion Separations</b>	1
<i>Bruce A. Moyer and Peter V. Bonnesen, Oak Ridge National Laboratory, Oak Ridge, Tennessee</i>	
1.1 Introduction	1
1.2 Anion Radii, Hydration, and Solvation	4
1.3 Anion Transfer	9
1.4 Solvent Extraction of Anions	22
1.5 Resin Anion Exchange	34
1.6 Conclusions	40
1.7 Acknowledgments	40
1.8 References	41
<b>2. Historical View on the Development of Anion Coordination Chemistry</b>	45
<i>Bernard Dietrich and Mir Wais Hosseini, Université Louis Pasteur, Strasbourg, France</i>	
2.1 Introduction	45
2.2 Halide Complexation	47
2.3 Linear Anions	52
2.4 Trigonal Planar Anions	52
2.5 Tetrahedral Anions	54
2.6 Square Planar Anions	56
2.7 Octahedral Anions	56
2.8 Molecular Assemblies	58
2.9 Conclusions	59
2.10 References	59

<b>3. Natural Anion Receptors: Anion Recognition by Proteins</b>	<b>63</b>
<i>Stefano Mangani, University of Siena, Siena, Italy</i>	
<i>Marta Ferraroni, University of Florence, Florence, Italy</i>	
3.1 Introduction	63
3.2 Carboxypeptidase A	64
3.3 Superoxide Dismutase	70
3.4 Phosphate and Sulfate Binding Proteins	72
3.5 Citrate Synthase	74
3.6 Concluding Remarks	76
3.7 References	77
<b>4. Artificial Anion Hosts. Concepts for Structure and Guest Binding</b>	<b>79</b>
<i>Franz P. Schmidtchen, Technische Universität München, Munich, Germany</i>	
4.1 Introduction	79
4.2 The Guests: Anions	80
4.3 The Concept of Artificial Anion Hosts	82
4.4 Positively Charged Anion Hosts	85
4.5 Electroneutral Hosts for Anions	118
4.6 References	135
<b>5. Structural and Topological Aspects of Anion Coordination</b>	<b>147</b>
<i>Jerry L. Atwood, University of Missouri at Columbia, Columbia, Missouri</i>	
<i>Jonathan W. Steed, King's College London, London, United Kingdom</i>	
5.1 Introduction	148
5.2 Protonated Polyamine-Based Receptors	150
5.3 The Guanidinium Moiety	171
5.4 Cyclophane Receptors	177
5.5 Neutral Receptors	177
5.6 Lewis Acid Receptors	183
5.7 Organometallic Receptors	195
5.8 Transition Metal Complexes	198
5.9 Polymetallic Receptors	200
5.10 Alkalide and Electride Salts	203
5.11 Anion Complexation in Biochemistry	207
5.12 Concluding Remarks	208
5.13 References	209

<b>6. Thermodynamics of Anion Complexation</b>	217
<i>Antonio Bianchi, University of Florence, Florence, Italy</i>	
<i>Enrique García-España, University of Valencia, Valencia, Spain</i>	
6.1 Introduction	217
6.2 A Simple Electrostatic Model for Ion Pairing	218
6.3 Anion Solvation	221
6.4 Energetics of Noncovalent Interactions	227
6.5 Covalently Bonded Anion Complexes	251
6.6 A Cautionary Word on Selectivity	253
6.7 Appendix: Methods for the Determination of Thermodynamic Parameters	259
6.8 References	266
 <b>7. Electrochemical Aspects of Anion Chemistry</b>	 277
<i>Antonio Doménech Carbó, University of Valencia, Valencia, Spain</i>	
7.1 Introduction	278
7.2 The Nature of Electrode Processes	279
7.3 Review of Selected Electrochemical Techniques	282
7.4 Electrochemical Pattern of Anion Coordination	286
7.5 Electrochemical Analysis of Anion Coordination Equilibria	295
7.6 Electrochemical Analysis of Coordination Equilibria for Nonelectroactive Anions: Competitive Methods	304
7.7 The Significance of Electrochemical Data	308
7.8 Other Issues	313
7.9 References	314
 <b>8. Photochemistry and Photophysics of Supramolecular Systems Containing Anions</b>	 321
<i>L. Moggi and M. F. Manfrin, University of Bologna, Italy</i>	
8.1 Introduction	321
8.2 Supramolecular Systems Involving Anionic Components	324
8.3 Ion Pairs	324
8.4 Adducts of Polyammonium Macrocycles	327
8.5 Other Studies	331
8.6 References	332
 <b>9. Anion Binding Receptors: Theoretical Studies</b>	 335
<i>Joanna Wiórkiewicz-Kuczera and Kristin Bowman-James, University of Kansas, Lawrence, Kansas</i>	
9.1 Introduction	335
9.2 Polyammonium Receptors	336

9.3	Calixarenes	346
9.4	Organoboron Macrocyclic Receptors	348
9.5	Organotin Macrocyclic Receptors	350
9.6	Electrides	350
9.7	Conclusion	351
9.8	References	353
<b>10.</b>	<b>Application Aspects Involving the Supramolecular Chemistry of Anions</b>	<b>355</b>
	<i>J. L. Sessler, P. I. Sansom, A. Andrievsky, and V. Kral, University of Texas at Austin, Austin, Texas</i>	
10.1	Introduction	355
10.2	General Classes of Synthetic Anion Receptors	356
10.3	Binding and Transport of Physiologically Important Anions	356
10.4	Anion Receptors in Catalysis	378
10.5	Anion Receptors in Analytical Chemistry	380
10.6	Waste Management	397
10.7	Anion Templated Reactions	401
10.8	References	403
<b>11.</b>	<b>Supramolecular Catalysis of Phosphoryl Anion Transfer Processes</b>	<b>421</b>
	<i>Mir Wais Hosseini, Université Louis Pasteur, Strasbourg, France</i>	
11.1	Introduction	421
11.2	Molecular Recognition of Nucleotides	422
11.3	From Recognition to Transformation	428
11.4	Conclusion	443
11.5	References	444
	<b>Index</b>	<b>449</b>
