<i>Introduction</i>		xi
1 Symplectic Fibrations		1
1.1 What Is a Symplectic Fiber Bundle?		1
1.2 Symplectic Connections		2
1.3 Minimal Coupling		5
1.4 The Coupling Form ω_Γ		7
1.5 Weak Coupling		12
1.6 Varying the Connection		17
2 Examples of Symplectic Fibrations: The Coadjoint Orbit Hierarchy		21
2.1 Basic Example		22
2.2 A Normal Form Theorem		27
2.3 Fibrations of Coadjoint Orbits and the Cross Section Theorem		29
2.4 Symplectic Mackey–Wigner Theory		45
2.5 Riemannian Submersions with Totally Geodesic Fibers		46
2.6 The Hannay–Berry Connection		51
3 Duistermaat–Heckman Polynomials		54
3.1 Orbital Methods in Representation Theory		54
3.2 Computing the D–H Polynomials: The Case of Linear Action		65
3.3 Computing the D–H Polynomials: The “Heckman” Formula		76
3.4 Is There a “Kostant” Formula Corresponding to the Heckman Formula?		84
3.5 Computing the D–H Polynomials: Formulas for the Jumps		95

Appendix 3.A: The Duistermaat–Heckman Measure as the Volume of Reduced Spaces	101
Appendix 3.B: Localization and the Duistermaat–Heckman Formula	102
4 Symplectic Fibrations and Multiplicity Diagrams	107
4.1 A Few Words about the Contents of This Chapter	107
4.2 The Heckman Formula	111
4.3 An Inductive Formula for the D–H Measure Associated with a Coadjoint Orbit of $U(n)$	116
4.4 The Kostant Formula	119
4.5 The Weak Coupling Limit	122
4.6 Reduction and Weak Coupling	125
4.7 Some Final Comments about Weak Coupling	130
5 Computations with Orbits	140
5.1 Generalities about Toral Moment Maps	140
5.2 Singular Values of the Moment Map $\Phi: \mathcal{O} \rightarrow \mathfrak{t}$	141
5.3 Examples: $SU(4)$ Orbits	146
5.4 Duistermaat–Heckman Polynomials for 10-Dimensional Orbit of $SU(4)$	153
5.5 Variation of Orbits	163
Appendix A: Multiplicity Formulas	167
A.1 Weyl, Kostant, and Steinberg Formulas	167
A.2 The Action of the Casimir Element on $Z(\lambda)$	170
A.3 Determining the Coefficients	172
A.4 Proof of the Kostant and Weyl Formulas	175
Appendix B: Equivariant Cohomology	177
B.1 Hidden Symmetries	177
B.2 Equivariant Cohomology	178
B.3 Superalgebras	180
B.4 Differential G Complexes	181
B.5 The Weil Algebra	184
B.6 The Matthai–Quillen Isomorphism	186
B.7 The Cartan Model	188
B.8 Locally Free Complexes	189
B.9 Equivariant Cohomology: Homogeneous Spaces	190
B.10 The Thom Form According to Matthai–Quillen	195

B.11 Equivariant Superconnections	197
B.12 Equivariant Characteristic Classes	199
B.13 Reduction Formula for Locally Free Torus Actions	201
B.14 Localization	204
B.15 Localization in Stages	210
Appendix C: Update	211
C.1 Commutativity of Quantization and Reduction	211
C.2 Toric Varieties	213
C.3 Orbifolds	213
C.4 Presymplectic Hamiltonian Actions	214
C.5 Nonisolated Fixed Points	214
<i>Bibliography</i>	215
<i>Index</i>	221
