# System Dynamics: An Introduction

Derek Rowell David N. Wormley

Prentice Hall, Upper Saddle River, New Jersey 07458

# Preface xiii

| 1   | Introduction  | 1  |
|-----|---|----|
| 1.1 | System Dynamics 1   |    |
| 1.2 | State-Determined Systems 5  |    |
| 1.3 | Physical System Units 12  |    |
|     | References 17   |    |
| 2   | Energy and Power Flow in State-Determined Systems   | 19 |
| 2.1 | Introduction192.1.1Energy Conservation in Physical Systems192.1.2Spatial Lumping in Physical Systems20                                |    |
| 2.2 | Mechanical Translational System Elements212.2.1Definition of Power Flow Variables222.2.2Primitive Translational Element Definitions23 |    |
| 2.3 | Mechanical Rotational Systems302.3.1Definition of Power Flow Variables302.3.2Primitive Rotational Element Definitions32               |    |
| 2.4 | Electric System Elements 37<br>2.4.1 Definition of Power Flow Variables 37<br>2.4.2 Primitive Electric Element Definitions 38         |    |
| 2.5 | Fluid System Elements442.5.1Definition of Power Flow Variables442.5.2Primitive Fluid Element Definitions46                            |    |

,

| 2.6 | Thermal System Elements532.6.1Definition of Power Flow Variables532.6.2Primitive Thermal Element Definitions54  |     |
|-----|---|-----|
|     | References 65   |     |
| 3   | Summary of One-Port Primitive Elements  | 66  |
| 3.1 | Introduction 66   |     |
| 3.2 | Generalized Through- and Across-Variables 67  |     |
| 3.3 | Generalization of One-Port Elements713.3.1A-Type Energy Storage Elements713.3.2T-Type Energy Storage Elements763.3.3D-Type Dissipative Elements783.3.4Ideal Sources80   |     |
| 3.4 | Causality 82  |     |
| 3.5 | Linearization of Nonlinear Elements 83  |     |
|     | References 91   |     |
| 4   | Formulation of System Models  | 92  |
| 4.1 | Introduction to Linear Graph Models 92  |     |
| 4.2 | Linear Graph Representation of One-Port Elements 93   |     |
| 4.3 | Element Interconnection Laws 95<br>4.3.1 Compatibility 95<br>4.3.2 Continuity 97<br>4.3.3 Series and Parallel Connection of Elements 98   |     |
| 4.4 | Sign Conventions on One-Port System Elements 98   |     |
| 4.5 | Linear Graph Models of Systems of One-Port Elements 101<br>4.5.1 Mechanical Translational System Models 101<br>4.5.2 Mechanical Rotational Systems 103<br>4.5.3 Linear Graph Models of Electric Systems 104<br>4.5.4 Fluid System Models 105<br>4.5.5 Thermal System Models 107 |     |
| 4.6 | Physical Source Modeling 108  |     |
|     | References 119  |     |
|     |   |     |
| 5   | State Equation Formulation  | 120 |
| 5.1 | <ul> <li>State Variable System Representation 120</li> <li>5.1.1 Definition of System State 120</li> <li>5.1.2 The State Equations 121</li> <li>5.1.3 Output Equations 123</li> <li>5.1.4 State Equation-Based Modeling Procedure 124</li> </ul>                                |     |
| 5.2 | Linear Graphs and System Structural Properties 124<br>5.2.1 Linear Graph Properties 124<br>5.2.2 Graph Trees 127  |     |

- 5.2.3 System Graph Structural Constraints 128
- 5.2.4 The System Normal Tree 129
- 5.3 State Equation Formulation 135
- 5.4 Systems with Nonstandard State Equations 145
  - 5.4.1 Input Derivative Form 145
  - 5.4.2 Transformation to the Standard Form 147
- 5.5 State Equation Generation Using Linear Algebra 150
- 5.6 Nonlinear Systems 152
  - 5.6.1 General Considerations 152
  - 5.6.2 Examples of Nonlinear System Model Formulation 153
- 5.7 Linearization of State Equations 158 References 168

# 6 Energy-Transducing System Elements

- 6.1 Introduction 169
- 6.2 Ideal Energy Transduction 173
  - 6.2.1 Transformer Models 175
  - 6.2.2 Gyrator Models 180
- 6.3 Multiport Element Models 181

# 6.4 State Equation Formulation 187

- 6.4.1 Graph Trees for Systems of Two-Port Transduction Elements 188
- 6.4.2 Specification of Causality for Two-Port Elements 188
- 6.4.3 Derivation of the Normal Tree 190
- 6.4.4 State Equation Generation 193

References 204

# 7 Operational Methods for Linear Systems

- 7.1 Introduction 205
- 7.2 Introduction to Linear Time Domain Operators 207
  - 7.2.1 System Operators 207
  - 7.2.2 Operational Block Diagrams 209
  - 7.2.3 Primitive Linear System Operators 209
  - 7.2.4 Superposition for Linear Operators 211

# 7.3 Representation of Linear Systems with Block Diagrams 212

- 7.3.1 Block Diagrams Based on the System Linear Graph 212
- 7.3.2 Block Diagrams Based on the State Equations 217
- 7.4 Input-Output Linear System Models 219
- 7.5 Linear Operator Algebra 220
  - 7.5.1 Interconnected Linear Operators 221
  - 7.5.2 Polynomial Operators 222
  - 7.5.3 The Inverse Operator 223

169

| ~       |   |
|---------|---|
| Content | 2 |
|         |   |

| 7.6  | The System Transfer Operator 225  |     |
|------|---|-----|
| 7.7  | Transformation from State Space Equations to Classical Form 226   |     |
| 7.8  | Transformation from Classical Form to State Space Representation 233  |     |
| 7.9  | The Matrix Transfer Operator 237  |     |
|      | References 243  |     |
| 8    | System Properties and Solution Techniques   | 244 |
| 8.1  | Introduction 244  |     |
| 8.2  | System Input Function Characterization 245  |     |
|      | <ul><li>8.2.1 Singularity Input Functions 246</li><li>8.2.2 Sinusoidal Inputs 248</li></ul>   |     |
|      | 8.2.2 Sinusoidal Inputs 248<br>8.2.3 Exponential Inputs 248   |     |
| 8.3  | Classical Solution of Linear Differential Equations 251   |     |
|      | 8.3.1 Solution of the Homogeneous Differential Equation 252   |     |
|      | <ul><li>8.3.2 Solution of the Nonhomogeneous Differential Equation 255</li><li>8.3.3 The Complete Solution 257</li></ul>                                |     |
| 8.4  | System Properties 259   |     |
| 0.1  | 8.4.1 System Stability 259  |     |
|      | 8.4.2 Time Invariance 261   |     |
|      | <ul><li>8.4.3 Superposition for Linear Time-Invariant Systems 262</li><li>8.4.4 Differentiation and Integration Properties of LTI Systems 263</li></ul> |     |
| 8.5  | Convolution 264   |     |
|      | References 275  |     |
| 9    | First- and Second-Order System Response   | 276 |
| 9.1  | Introduction 276  |     |
| 9.2  | First-Order Linear System Transient Response 277  |     |
|      | 9.2.1 The Homogeneous Response and the First-Order Time Constant 279  |     |
|      | <ul><li>9.2.2 The Characteristic Response of First-Order Systems 283</li><li>9.2.3 System Input–Output Transient Response 286</li></ul>                 |     |
|      | 9.2.4 Summary of Singularity Function Responses 288   |     |
| 9.3  | Second-Order System Transient Response 295  |     |
|      | 9.3.1 Solution of the Homogeneous Second-Order Equation 300   |     |
|      | <ul><li>9.3.2 Characteristic Second-Order System Transient Response 308</li><li>9.3.3 Second-Order System Transient Response 315</li></ul>              |     |
|      | References 330  |     |
|      |   |     |
| 10   | General Solution of the Linear State Equations  | 331 |
| 10.1 | Introduction 331  |     |
| 10.2 | State Variable Response of Linear Systems 332   |     |
|      | 10.2.1 The Homogeneous State Response 332   |     |
|      | 10.2.2 The Forced State Response of Linear Systems 334  |     |

viii

- 10.3 The System Output Response 336
- 10.4 The State Transition Matrix 337
  - 10.4.1 Properties of the State Transition Matrix 337
  - 10.4.2 System Eigenvalues and Eigenvectors 338
  - 10.4.3 A Method for Determining the State Transition Matrix 344
  - 10.4.4 Systems with Complex Eigenvalues 345
  - 10.4.5 Systems with Repeated Eigenvalues 347
  - 10.4.6 Stability of Linear Systems 347
  - 10.4.7 Transformation of State Variables 349

# 10.5 The Response of Linear Systems to the Singularity Input Functions 353

- 10.5.1 The Impulse Response 354
- 10.5.2 The Step Response 356
- 10.5.3 The Ramp Response 359

References 365

# 11 Solution of System Response by Numerical Simulation

11.1 Introduction 366

#### 11.2 Solution of State Equations by Numerical Integration 367

- 11.2.1 Numerical Integration Techniques 367
- 11.2.2 Euler Integration of a First-Order State Equation 368
- 11.2.3 Euler Integration Methods for a System of Order n 374
- 11.2.4 Higher-Order Integration Techniques 375

# 11.3 Numerical Simulation Methods Based on the State Transition Matrix 384

- 11.3.1 Step-Invariant Simulation 384
- 11.3.2 Ramp-Invariant Simulation 386

References 394

# 12 The Transfer Function

12.1 Introduction 395

12.2 Single-Input Single-Output Systems 396

- 12.3 Relationship to the Transfer Operator 398
- 12.4 System Poles and Zeros 398
  - 12.4.1 The Pole-Zero Plot 400
  - 12.4.2 System Poles and the Homogeneous Response 400
  - 12.4.3 System Stability 404
- 12.5 Geometric Evaluation of the Transfer Function 405
- 12.6 Transfer Functions of Interconnected Systems 407

#### 12.7 State Space-Formulated Systems 408

- 12.7.1 Single-Input Single-Output Systems 408
- 12.7.2 Multiple-Input Multiple-Output Systems 412
