Abstract Since the 1990s, the International Union of Immunological Societies (IUIS) PID expert committee (EC), now called Inborn Errors of Immunity Committee, has published every other year a classification of the inborn errors of

immunity. This complete catalog serves as a reference for immunologists and researchers worldwide. However, it was unadapted for clinicians at the bedside. For those, the IUIS PID EC is now publishing a phenotypical classification since 2013,

which proved to be more user-friendly. There are now 320 single-gene inborn errors of immunity underlying phenotypes as diverse as infection, malignancy, allergy, auto-immunity, and auto-inflammation. We herein propose the revised 2017 phenotypic classification, based on the accompanying 2017 IUIS Inborn Errors of Immunity Committee classification.

Keywords Primary immunodeficiencies · Classification · Phenotypic · IUIS · Inborn errors of immunity

Human primary immunodeficiency diseases (PID) comprise 330 distinct disorders with 320 different gene defects listed [1]. Long considered as rare diseases, recent studies tend to show that they are more common than generally thought, if only by their rapidly increasing number [2, 3]. The International Union of Immunological Societies (IUIS) PID expert committee proposed a PID classification since 1999 [1], which facilitates clinical research and comparative studies worldwide; it is updated every other year to include new disorders or disease-causing genes. This classification is organized in tables, each of which groups PIDs that share a given pathogenesis. As this catalog is not adapted for use by the clinician at the bedside, the now called Inborn Errors of Immunity Committee proposed since 2013 a phenotypic complement to its classification [4]. Moreover, a smartphone application has been published, based on the 2015 phenotypic classification [5]. As the number of inborn errors of immunity is quickly increasing,

Fig. 1 Immunodeficiencies affecting cellular and humoral immunity. a ▶ Severe combined immunodeficiencies defined by T cell lymphopenia. b Combined immunodeficiencies. * T cell lymphopenia in SCID is defined by CD3+ T cells < 300/μL. AD: autosomal dominant transmission; ADA: adenosine deaminase; Ag: antigen; AR: autosomal recessive transmission; β2m: bêta-2 microglobulin; Bc: B cells; CBC: complete blood count; CD: cluster of differentiation; CVID: common variable immunodeficiency; def: deficiency; EBV: Epstein Barr virus; HHV8: human herpes virus 8; HIGM: hyper IgM syndrome; HPV: human papillomavirus; Ig: immunoglobulins; MHC: major histocompatibility complex; NI: normal; NK: natural killer; SCID: severe combined immunodeficiency; Tc: T cells; TCR: T cell receptor; Treg: regulatory T cells; XL: X-linked transmission

and at an even faster pace since the advent of next-generation sequencing, this phenotypic classification requires revision at the same pace as the classical IUIS classification.

Here, we present an update of these figures (Figs. 1, 2, 3, 4, 5, 6, 7, 8, and 9), based on the accompanying 2017 report in inborn errors of immunity. We included all diseases included in the 2017 update of the IUIS classification [1] and split some categories in two parts to ease the lecture. An algorithm was assigned to each of the nine main groups of the classification and the same color was used for each group of similar conditions. Disease names are presented in red and genes in bold and italics. Mode of inheritance is expressed when adequate; if not expressed, the default mode of transmission is autosomal recessive. Clinical features that point to several diseases are presented in italics before the disease names.

I. Immunodeficiencies affecting cellular and humoral immunity.

(a) Severe combined immunodeficiencies SCID, defined by CD3 T cell lymphopenia*.

I. Immunodeficiencies affecting cellular and humoral immunity

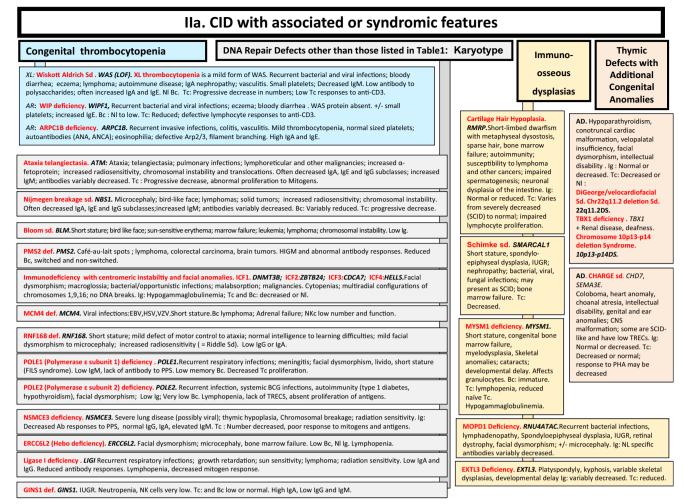

Fig. 2 a, b CID with associated or syndromic features. Ab: antibody; AD: autosomal dominant transmission; ANA: anti-nuclear antibodies; ANCA: anti-neutrophil cytoplasm antibodies; AR: autosomal recessive transmission; Bc: B cells; BCG: Bacillus Calmette-Guerin; BCR: B cell receptor; CD: cluster of differentiation; CMV: cytomegalovirus; CNS: central nervous system; def: deficiency; DNA: desoxyribonucleic acid; DKC: dyskeratosis congenita; EDA: anhidrotic ectodermal dysplasia; GOF: gain-of-function; HIES: hyper IgE syndrome; FILS: facial

dysmorphism, immunodeficiency, livedo and short stature; ID: immunodeficiency; Ig: immunoglobulins; IUGR: intrauterine growth retardation; LOF: loss-of-function; MDS: myelodysplasia; NI: normal; NK: natural killer; PHA: phytohemagglutinin; PPS: polysaccharides; SCID: severe combined immunodeficiency; sd: syndrome; Tc: T cells; TCR: T cell receptor; TREC: T cell receptor excision circle; XL: X-linked transmission

IIb. CID with associated or syndromic features

Hyper-IgE syndromes (HIES)

AD-HIES (Job sd), STAT3, LOF, Distinctive facial features (broad nasal bridge); bacterial infections (boils and pulmonary abscesses, pneumatoceles) due to S. aureus. Aspergillus, Pneumocystis jirovecii; eczema: mucocutaneous candidiasis: hyperextensible joints, osteoporosis and bone fractures, scoliosis, retention of primary teeth; aneurysm formation Ig:Elevated IgE; specific antibody production decreased. Bc:Normal; reduced switched and non-switched memory Bc; BAFF expression increased. Tc:NI overall; Th-17 and T-follicular helper cells decreased.

Comel Netherton sd. SPINK5;

Congenital ichthyosis, bamboo hair: atopic diathesis: increased bacterial infections. Elevated IgE and IgA: Other Ig: variably decreased. Bc: Switched and non-switched Bc are reduced.

PGM3 deficiency. PGM3. Severe atopy: autoimmunity: Immunoosseous dysplasias. Recurrent pneumonia, recurrent skin abscesses,bacterial and viral infections; cognitive impairment; hypomyelination. Ig:NI or elevated. Elevated IgE; eosinophilia. Reduced B and memory Bc. CD8 and CD4 Tc may be decreased.

Dyskeratosis congenita (DKC) Myelodysplasia, defective

telomere maintenance Exclude other causes: Fanconi anemia, Blackfan-Diamond

IUGR, microcephaly, nail dystrophy, sparse scalp hair and eyelashes; poikiloderma or abnormal skin pigmentation; palmar hyperkeratosis; premalignant oral leukoplakia; pancytopenia; +/recurrent infections. A severe phenotype with developmental delay and cerebellar hypoplasia known as Hoyeraal-Hreidarsson Syndrome (HHS) may occur in some patients. Ig and Bc: variable **DKC1:** XL, Bc and Tc: Progressive decrease. NOLA2 (NHP2), NOLA3 (NOP10): AR, Tc: Decreased. RTEL1: AD/AR, Tc: Decreased. TERC, TINF2: AD, Tc: variable. TERT, TPP1: AD/AR, Tc: variable. DCLRE1B/SNM1/APOLLO, PARN, WRAP53: AR, Tc: variable.

COATS plus Sd. Intracranial calcification, abnormal telomeres, IUGR, gastrointestinal hemorrhage due to vascular ectasia, hypocellular bone marrow. pancytopenia

STN1: premature aging, CTC1: sparse graying hair, dystrophic nails, osteopenia, retinal telangiectasia

SAMD9. AD. SAMD9 (GOF): IUGR with gonadal abnormalities, adrenal failure, MDS with chromosome 7 aberrations, predisposition to infections, enteropathy, absent spleen

SAMD9L. AD. SAMD9L. (GOF) :Cytopenia predisposition to MDS with chromosome 7 aberrations and progressive cerebellar dysfunction

Defects of Vitamin **B12** and Folate Metabolism:

Megaloblastic anemia, la decreased. Transcobal ency. TCN2. pancytopenia, if untreated for prolonged periods results in intellectual disability

hereditary folate malabsorbtion. SLC46A1. if untreated for prolonged periods results in . intellectual disability

Methylene-tetrahydrofolate dehydrogenase 1

MTHFD1.Recurrent bacterial infection. Pneumocystis jirovecii, neutropenia, seizures, intellectual disability, folate-responsive, poor antibody responses to conjugated polysaccharide antigens. Low Bc.

Anhidrotic Ectodermodysplasia with ID

Anhidrotic ectodermal dysplasia, various infections (bacteria, mycobacteria, viruses and funai), colitis, variable defects of skin, hair and teeth.

(NEMO). XL, monocyte dysfunction. Ig decreased, some with elevated IgA, IgM, poor specific antibody responses, absent antibody to polysaccharide antigens, Bc; NI. Low memory and isotype switched Bc. Tc: NI/decreased, TCR activation impaired.

EDA-ID due to IKBA GOF mutation. NFKBIA (IKBA). AD Tc and monocyte dysfunction Decreased IgG and IgA elevated IgM, poor specific antibody responses, absent antibody to polysaccharide antigens, Normal Bc numbers, impaired BCR activation, low memory and isotype switched Bc. Normal total Tc, TCR activation impaired.

Others

Purine nucleoside phosphoryla deficiency. PNP. Autoimmune hemolytic anemia, neurological impairment Hypouricemia. lg : NI/Low. Bc: NI. Tc: Progressive decrease

ID with multiple intestinal atresias. TTC7A. Bacterial (sepsis), fungal, viral infections, multiple intestinal atresias, often with intrauterine polyhydramnios and early demise, some with SCID phenotype. Markedly decreased IgG, IgM, IgA. Bc:NI/low.Tc: Variable/absent,low TRECs.

Hepatic veno-occlusive disease with immunodeficiency (VODI), SP110.

Hepatic veno-occlusive disease. Pneumocystis jirovecii pneumonia, CMV, candida, thrombocytopenia, hepatosplenomegaly, cerebrospinal leukodystrophy. Decreased IgG, IgA, IgM. absent germinal centers and tissue plasma cells. Decreased memory Bc Decreased memory Tc.

Vici syndrome, EPG5. Agenesis of the corpus callosum, cataracts, cardiomyopathy,skin hypopigmentation, intellectual disability, microcephaly, CMC, Ig: Decreased IgG2, Bc: Defective. Profound depletion of CD4+ cells.

Bacterial infections, autoinflammation, amylopectinosis. Bc: NI, decreased memory Bc. HOIL1 deficiency. HOIL1 (RBCK1). Poor antibody responses to polysaccharides. HOIP deficiency. HOIP1 (RNF31). Lymphangiectasia. Ig: decreased.

Calcium Channel Defects. Autoimmunity, EDA, non-progressive myopathy. Ig and Bc: NI. Tc: Normal, defective TCR mediated activation. ORAI-1 deficiency. ORAI1. STIM1 deficiency. STIM1

Hennekam-lymphangiectasia-lymphedema syndrome. CCBE1. Lymphangiectasia and lymphedema with facial abnormalities and other dysmorphic features. Ig: decreased. Bc and Tc: Variable.

STAT5b deficiency. STAT5B. Growth-hormone insensitive dwarfism, dysmorphic features, eczema, lymphocytic interstitial pneumonitis, autoimmunity

Kabuki Sd. Typical facial abnormalities, cleft or high arched palate, skeletal abnormalities, short stature, intellectual disability, congenital heart defects, recurrent infections (otitis media, pneumonia) in 50% of patients. Autoimmunity may be present. Low IgA and occasionally low IgG. KMT2D (MLL2): AD. KDM6A: XL.

Fig. 2 (continued)

III. Predominantly Antibody deficiencies, a: Hypogammaglobulinemia

Serum Immunoglobulin Assays: IgG, IgA, IgM, IgE

IgG, IgA and/or IgM ♥ ♥

Exclude second causes: drugs [Hx], myeloma [bone marrow], lymphoma. Ig loss (not hypo-IgM) in urine, gastro-intestinal or skin.

→ B Lymphocyte (CD19+) enumeration (CMF)

B absent

Severe bacterial infection. All Ig isotypes decreased.

X-Linked Agammaglobulinemia, BTK. Some patients have detectable lg. ProBc:

 $\frac{AR}{lg\alpha}: \mu \ \text{heavy chain Def. } IGHM \\ lg\alpha \ \text{def. CD79A}, \qquad lg\beta \ \text{def. CD79B} \\ \textbf{BLNK} \ \text{def. } BLNK, \qquad \lambda 5 \ \text{def. } IGLL1$ ProBc: NI

PI3KR1 def. PIK3R1. ProBc: Decreased

E47 transcription factor def. TCF3.

B >1 %

Commun Variable Immunodeficiency Phenotype

CVID with no gene defect specified.

Clinical phenotypes vary: most have recurrent infections, some have polyclonal lymphoproliferation, autoimmune cytopenias and/or granulomatous disease

AD. Severe bacterial infections; EBV susceptibility. PIK3CD mutation (GOF). PIK3CD GOF. Decreased pro-Bc. PIK3R1 deficiency (LOF). PIK3CD. Pro-Bc present and low memory Bc.

PTEN Deficiency (LOF). PTEN. AD. Lymphoproliferation, Autoimmunity

CD81 deficiency. CD81. Recurrent infections, may have glomerulonephritis.

TACI deficiency. TNFRSF13B (TACI). AD or AR. Variable clinical expression

BAFF receptor deficiency, TNFRSF13C (BAFF-R), Variable clinical expression, Low IgG and IgM.

TWEAK deficiency. TWEAK (TNFSF12). AD. Pneumonia, bacterial infections, warts, thrombocytopenia. Neutropenia. Low IgM and A, lack of anti-pneumococcal antibody.

Mannosyl-oligosaccharide glucosidase deficiency (MOGS). MOGS (GCS1). Bacterial and viral infections, severe neurologic disease, also known as congenital disorder of glycosylation type IIb (CDG-IIb). Severe hypogammagl.

TTC37 deficiency. TTC37. Recurrent bacterial and viral infections, Abnormal hair findings: trichorrhexis nodosa. Poor antibody response to pneumococcal vaccine.

IRF2BP2 deficiency. IRF2BP2. Recurrent infections, possible autoimmunity and inflammatory disease. Hypogammaglobulenia, absent IgA.

CD19 deficiency. CD19. Recurrent infections, may have glomerulonephritis.

CD20 deficiency. CD20. Recurrent infections. Low IgG, NI or elevated IgM and IgA.

CD21 deficiency. Recurrent infections. Low IgG, impaired anti-pneumococcal response.

TRNT1 deficiency, TRNT1. Congenital sideroblastic anemia, deafness, developmental delay. B cell deficiency and hypogammagl.

NFKB1 deficiency. NFKB1. AD. Recurrent sinopulmonary infections, COPD, EBV proliferation, autoimmunity, autoinflammation. Ig normal or low, Bc low or normal, low memory

NFKB2 deficiency. NFKB2. AD. Recurrent sinonulmonary infections, alonecia and endocrinopathies (ie, central adrenal insufficiency). Low Bc.

IKAROS deficiency. IKZF1. AD. Recurrent sinopulmonary infections. Low or normal Bc potentially reducing levels with age.

ATP6AP1 deficiency. ATP6AP1. XL. Hepatopathy, leukopenia, low copper. Leukopenia and hypogammagl

III. Predominantly Antibody deficiencies. b: Other Antibody deficiencies

Serum Immunoglobulin Assays: IgG, IgA, IgM, IgE

Severe Reduction in Serum IgG and IgA with NI/elevated IgM and Normal Numbers of Bc: Hyper IgM Syndromes

AID deficiency, AICDA

Bacterial infections, enlarged lymph nodes and germinal centers

UNG deficiency. UNG.

Enlarged lymph nodes and germinal centers.

Severe bacterial infections.

Family or personal history of cancer. Variable IgG, defects, increased IgM in some, NI Bc, low switched memory Bc.

Isotype, Light Chain, or Functional Deficiencies with Generally NI Numbers of Bc

elective IgA deficiency, Unknown.

Bacterial infections, autoimmunity mildly increased. Very low to absent IgA with other isotypes normal, normal subclasses and specific antibodies.

buliemia of infancy, Unknown. Usually not associated with significant infections, normal ability to produce antibodies to vaccine antigens. IgG and IgA decreased.

gG subclass deficiency with IgA deficiency. Unknown. Recurrent bacterial infections. Reduced IgA with decrease in one or more IgG subclass.

Isolated IgG subclass deficiency. Unknown

Usually asymptomatic, a minority may have poor antibody response to specific antigens and recurrent viral/bacterial infections. Reduction in one or more IgG subclass.

ecific antibody deficiency with normal Ig levels and normal B

Reduced ability to produce antibodies to specific antigens. Ig: NI.

Mutation or chromosomal deletion at 14q32

May be asymptomatic. One or more IgG and/or IgA subclasses as well as IgE may be absent.

Kappa chain deficiency. IGKC.

Asymptomatic. All immunoglobulins have lambda light chain

1 deficiency. Unknown. Pneumococcal / bacterial infections. Absent serum IgM.

High Bc numbers due to constitutive NF-κB activation

CARD11 GOF

CARD11. AD. BENTA syndrome

Splenomegaly,

lymphadenopathy,

poor vaccine responses.

▼ Fig. 3 Predominantly antibody deficiencies. a Hypogammaglobulinemias. b Other antibody deficiencies. AD: autosomal dominant transmission; AR: autosomal recessive transmission; Bc: B cells; BENTA: B cell expansion with NF-κB and T cell anergy; CD: cluster of differentiation; CMF: flow cytometry; COPD: chronic obstructive pulmonary disease; def: deficiency; EBV: Epstein Barr virus; GOF: gain-of-function; Hx: patient history; Ig: immunoglobulins; NI: normal; XL: X-linked transmission

Compliance with Ethical Standards

IV. Diseases of immune dysregulation. a: Hemophagocytic Lymphohistiocytosis HLH & EBV susceptibility

Hemophagocytic Lymphohistiocytosis (HLH) Susceptibility to EBV RASGRP1. deficiency Familial Hemophagocytic **EBV** associated HLH Hypopigmentation: Recurrent pneumonia, herpes virus Lymphohistiocytosis Syndromes: Fever, Partial albinism . Decreased NK and CTL infections, EBV associated lymphoma. XL. XLP1. SH2DIA. activities(cytotoxicity and/or degranulation). Bc and (H)SM, cytopenias. Increased IgA. Bc and Tc: Poor Clinical and immunologic features Tc: NI NI Bc. Increased activated Tc. activation, proliferation, motility by EBV Decreased to absent NK and CTL activities triggered lymphoproliferation, Lymphoma. cvtotoxicity. deficiency. CD70 (TNFSF7) Chediak Higashi sd. LYST Hypogamma globulinemia, Hodgkin's lymphoma. Reduced IgM, Recurrent infections, fever, (H)SM, bleeding Absent iNKT cells. Impaired NK IgG, IgA (75%) and reduced Ag-specific Perforin deficiency (FHL2).PRF1. cell and CTL cytotoxic activity Ab responses (50%). Bc:poor antibody progressive Reduced Memory B cells . SAP and memory responses. Tc:low Treg, UNC13D / Munc13-4 deficiency (FHL3). deficiency (CMF). Giant lysosomes (WBC). dysfunction. poor activation and function neutropenia, cytopenias, Specific hair shaft CTPS1 deficiency. CTPS1. XI XIP2. XIAP. Syntaxin 11 deficiency (FHL4). STX11. Recurrent/chronic bacterial and viral Splenomegaly, lymphoproliferation, infections (EBV, VZV), EBV lympho-Colitis, IBD, hepatitis. Hypogamma-STXBP2 / Munc18-2 deficiency (FHL5) STXBP2. proliferation. Вс globulinemia, Low iNKT non-Hodgkin Griscelli sd type 2. RAB27a. lymphoma. Tc: poor proliferation to Ag Increased T cells susceptibility to Fever, (H)SM, cytopenias; Specific hair shaft apoptosis to CD95 and enhanced activation-induced cell death (AICD). Normal NK and CTL RLTPR (CARMIL2) deficiency. RLTPR. Recurrent bacterial, fungal and anomaly mycobacterial infections, viral warts, molluscum cytotoxic activity. XIAP def (CMF) lymphoproliferative and other malignancy, atopy. Ig NI to low, poor T Hermansky Pudlak sd type 2. AP3B1. dependent antibody response. NI Bc. Tc: low Treg, high CD4, poor function. Recurrent infections, pulmonary fibrosis, (TNFRSF7). ITK deficiency. ITK. EBV associated Bc lymphoproliferation, increased bleeding, neutropenia; Specific hair Features triggered by EBV lymphoma, NI or low IgG. Tc: Progressive decrease infection, aplastic anemia, low shaft anomaly iNKTc lymphoma. Low Ig MAGT1 deficiency (XMEN). MAGT1.XL. EBV infection, lymphoma, Hermansky-Pudlak sd, type 10. AP3D1. viral infections, respiratory and GI infections. Low CD4 Low recent thymic emigrant cells, poor proliferation to CD3 Oculocutaneous albinism, severe neutropenia, EBV-driven lymphoproliferative disease. Failure to kill autologous recurrent infections, seizures, hearing loss and PRKCD deficiency. PRKCD. Recurrent infections, EBV EBV transformed Bc lymphoproliferation, neurodevelopmental delay. chronic infection. autoimmunity (nephrotic and antiphospholipid Sd). Low IgG. Low memory Bc high CD5 Bc

Fig. 4 Diseases of immune dysregulation. **a** Hemophagocytic lymphohistiocytosis. **b** Other diseases of immune dysregulation. Ab: antibody; AD: autosomal dominant transmission; Ag: antigen; ALPS: autoimmune lymphoproliferative syndrome; APS: autoimmune polyendocrinopathy syndrome; AR: autosomal recessive transmission; Bc: B cells; CD: cluster of differentiation; CMF: flow cytometry; CTL: cytotoxic T lymphocytes; def: deficiency; DNT: double negative T cells; EBV: Epstein

Barr virus; FHL: familial hemophagocytic lymphohistiocytosis; GOF: gain-of-function; HLH: hemophagocytic lymphohistiocytosis; (H)SM: (hepato)splenomegalia; IBD: inflammatory bowel disease; Ig: immunoglobulin; IL-10: interleukin-10; LOF: loss-of-function; iNKT: invariant NKT cells; NK: natural killer cells; NI: normal; sd: syndrome; SLE: systemic lupus erythematous disease; Tc: T cells; TCR: T cell receptor; XL: X-linked transmission

Autoimmune cytopenias, autoimmunity. Tripeptidyl-Peptidase II Deficiency, TPP2, AR, Bacterial and viral infections, and plasmablasts. enteropathy, interstitial lung recurrent infections. Variable lymphoproliferation, severe autoimmune Hypogammaglobulinemia. extra-lymphoid Enhanced STAT3 cytopenias, hypergammaglobulinemia, recurrent lymphocyte lymphocytic infiltration recurrent signaling, leading to infections. Decreased Tc and Bc. activation. Slightly increased infections . Impaired function of increased Th17 cell DNT cells. Tregs. Tc and Bc decreased. differentiation, JAK1 GOF. JAK1. AD GOF. HSM, eosinophilia, lymphoproliferation eosinophilic enteritis, thyroid disease, poor FADD deficiency. FADD. AR. and autoimmunity. BACH2 deficiency. BACH2. AD. growth, viral infections. Functional hyposplenism. Decreased Tregs and Lymphocytic colitis, bacterial and viral infections, impaired function. To sinopulmonary infections. deficiency. PEPD. AR. Autorecurrent episodes of and Bc decreased. Impaired memory Bo antibodies common, chronic skin ulcers, encephalopathy and liver development. Progressive To eczema, infections dysfunction. lymphopenia.

Fig. 4 (continued)

Fig. 5 Congenital defects of phagocyte number, function, or both. a ▶ Neutropenia. b Functional defects of phagocytes. AD: autosomal dominant transmission; AML: acute myeloid leukemia; AR: autosomal recessive transmission; BCG: Bacillus Calmette-Guerin; CD: cluster of differentiation; CGD: chronic granulomatous disease; CMF: flow cytometry; CMML: chronic myelomonocytic leukemia; def: deficiency; DHR: dihydrorhodamine-1,2,3; GOF: gain-of-function; IUGR: intrauterine growth retardation; MDS: myelodysplasia; NBT: nitroblue of tetrazolium; NK: natural killer cells; WBC: white blood cells; XL: X-linked transmission

V. Congenital defects of phagocyte number, function, or both. a: Neutropenia(without anti-PMN)

Syndrome associated

Shwachman-Diamond syndrome. SBDS. AR. DNAJC21. AR.

Pancytopenia, exocrine pancreatic insufficiency, chondrodysplasia

G6PC3 deficiency (SCN4). **G6PC3**. AR. Structural heart defects, urogenital abnormalities, inner ear deafness, and venous angiectasias of trunks and limbs. Affected functions: Myeloid differentiation, chemotaxis, O₂ production.

Glycogen storage disease type 1b. G6PT1. AR.

Fasting hypoglycemia, lactic acidosis, hyperlipidemia, hepatomegaly.

Cohen syndrome. COH1. AR. Dysmorphism, mental retardation, obesity, deafness.

Barth Syndrome (3-Methylglutaconic aciduria type II). $\textit{TAZ.}\ \textit{XL.}$

Cardiomyopathy, myopathy, growth retardation.

Clericuzio syndrome (Poikiloderma with neutropenia). C16ORF57 (USB1). AR. Retinopathy, developmental delay, facial dysmorphism, poikiloderma.

VPS45 deficiency (SCN5). VPS45. AR.

Extramedullary hematopoiesis, bone marrow fibrosis, nephromegaly.

P14/LAMTOR2 deficiency. LAMTOR2. AR.

Partial albinism, growth failure. Hypogammaglobulinemia, reduced CD8 cytotoxicity.

JAGN1 deficiency. JAGN1. AR. Osteopenia. Myeloid maturation arrest.

3-Methylglutaconic aciduria. CLPB. AR. Neurocognitive developmental aberrations, microcephaly, hypoglycemia, hypotonia, ataxia, seizures, cataracts, IUGR.

SMARCD2 deficiency. SMARCD2. AR.

Developmental aberrations, bones defect, myelodysplasia

WDR1 deficiency. WDR1. AR.

Poor wound healing, severe stomatitis, neutrophil nuclei herniate. Mild neutropenia.

HYOU1 deficiency. HYOU1. AR. Hypoglycemia, inflammatory complications.

No syndrome associated

Elastase deficiency (SCN1). ELANE. AD. Susceptibility to MDS/leukemia. Severe congenital neutropenia or cyclic neutropenia (perform CBC twice weekly/ 4 weeks).

HAX1 deficiency (Kostmann Disease) (SCN3).
HAX1. AR. Cognitive and neurological defects in patients with defects in both HAX1 isoforms,

GFI 1 deficiency (SCN2). GFI1. AD.

susceptibility to MDS/leukemia

B/T lymphopenia

X-linked neutropenia/ myelodysplasia WAS GOF.

WAS. Myeloid maturation arrest, monocytopenia, variable lymphoid anomalies .

G-CSF receptor deficiency. CSF3R. AR.

Stress granulopoiesis disturbed

Neutropenia with combined immune deficiency.

MKL1. AR.

Mild thrombocytopenia. Lymphopenia.

V. Congenital defects of phagocyte. b : Functional defects

Syndrome associated

Cystic fibrosis. CFTR. AR.

Pancreatic insufficiency,

Respiratory infections, elevated

sweat chloride

Papillon-Lefèvre . CTSC.

Periodontitis, palmoplantar

hyperkeratosis

Localized juvenile periodontitis . FPR1.

Periodontitis only

β-Actin . **ACTB**Mental retardation

Leukocyte adhesion deficiency.

Skin infections evolve to large ulcers. Leukocytosis with neutrophilia (WBC > 25000)

LAD I . ITGB2

Delayed cord separation with omphalitis+++, no pus formation, lack of inflammation is observed in infection area. Periodontitis leads to early loss of teeth., CD18 def (CMF) severity of the disease correlates with the degree of deficiency in CD18. (WBC 20,000–150,000 with 60–85 % neutrophils)

LAD II. SLC35C1

Extremely rare. Recurrent infections. Severe growth delay and severe intellectual deficit. Facial dysmorphism (depressed nasal bridge). Severe periodontitis later in life. Bombay blood group. Infections: rarely life threatening. Patients may live to adulthood.

LAD III. FERMT3

Severe bacterial infections and severe bleeding disorder; osteopetrosis (severe cases). Platelet aggregation assay. No Syndrome associated: DHR assay (or NBT test)?

Normal

GATA2 def (MonoMac sd) .

GATA2, AD

Susceptibility to Mycocbacteria,

Papilloma Viruses,

Histoplasmosis, Lymphedema.

Pulmonary alveolar proteinosis,

myelodysplasia/AML/ CMML .

Monocytopenia. Low NK.

Specific granule deficiency.

C/EBPE.

Bilobed nuclei

Pulmonary alveolar proteinosis. CSF2RA, AR.

CSF2RB, XL.

Affected cells: Alveolar

macrophages. Affected fonction:

GM-CSF signaling

Abnormal

CGD.

Early onset of severe and recurrent infections affecting initially the natural barriers of the organism (lungs, lymph nodes, skin), and eventually inner structures (liver, spleen, bones, brain, and +++ hepatic abscess). Autoinflammatory phenotype, IBD

Granulomas obstructing respiratory, urinary or gastrointestinal tracts. Inflammatory bowel disease (Crohn's like disease) and perianal disease: up to 30 %

Pathogens: typically catalase positive bacteria (S. aureus and gram-negative bacilli, Aspergillus, Candida); other: Burkholderia cepacia, Chromobacterium violaceum, Nocardia, and invasive Serratia marcescens. In developing countries, BCG: adverse effects in up to 20 %. Microscopic granulomas.

XL CGD: **CYBB** (gp91^{phox}) **NCF1** (p47^{phox}) , AR **CYBA** (p22^{phox}), AR **NCF4** (p40^{phox}), AR **NCF2** (p67^{phox}), AR

Rac 2 def . RAC2. Poor wound healing. LAD phenotype.

G6PD def Class I. G6PD. Reduced DHR. Infections.

VI. Defects in Intrinsic and Innate immunity. a: Bacterial and Parasitic Infections

Predisposition to Invasive Bacterial infections (pyogens):

meningitis, sepsis, arthritis, osteomyelitis and abscesses, often in the absence of fever.

Predominant pathogens (*S. pneumoniae, S. aureus* and *Pseudomonas aeruginosa*). Non-invasive bacterial infections (skin infections and upper respiratory tract infections). Improve with age.

Routine Usual screening tests are normal. Specific screening tests (lack of proinflammatory cytokine production and CD62L shedding): available only in specialized clinical immunology laboratories.

IRAK4 def . IRAK4, AR
MyD88 def . MYD88, AR.

IRAK-1 def. IRAK1, XL.

X-linked MECP2 deficiency-related syndrome due to a large *de novo* Xq28 chromosomal deletion encompassing both *MECP2* and *IRAK1*

TIRAP def. TIRAP, AR.

Staphylococcal disease during childhood.

Isolated congenital asplenia.

Bacteremia (encapsulated bacteria). No spleen.

RPSA, AD

HMOX, AR. Hemolysis, nephritis, inflammation

Predisposition to Parasitic and Fungal infections

CARD9 def. CARD9, AR.

Predisposition to

INVASIVE Fungal

Invasive candidiasis

infection, deep

infections.

APOL1, AD

Tissues

dermatophytoses,

other invasive fungal

Trypanosomiasis.

Diseases

Predisposition to Mucocutaneous Candidiasis (CMC)

Chronic Mucocutaneous
Candidiasis without ectodermal
dysplasia

STAT1 GOF. STAT1, AD

various fungal, bacterial and viral (HSV) infections, autoimmunity (thyroiditis, diabetes, cytopenias), enteropathy

IL-17F deficiency.

IL17F, AD. Folliculitis.

IL-17RA deficiency.

IL17RA. AR

Folliculitis. Susceptibility to *S. aureus* (skin infections)

IL-17RC deficiency.

IL17RC. AR.

ACT1 deficiency. ACT1, AR.

Blepharitis, folliculitis and macroglossia.

Others

Osteopetrosis. TNFRSF11A, PLEKHM1

TCIRG1, AR. +

hypocalcemia

CLCN7, OSTM1, AR. + hypocalcemia, neurologic features

SNX10, AR. + visual impairment

TNFSF11, AR. + severe growth retardation

Hydradenitis

suppurativa. *PSENEN,* AD.

Inborn Errors of
Immunity Related to
Non-Hematopoietic

NCSTN, AD. + acne
PSEN, AD. +
hyperpigmentation

Acute liver failure due to NBAS def. NBAS, AR. Fever induces liver

Acute necrotizing encephalopathy.

RANBP2, AD. Fever induces acute encephalopathy

Fig. 6 Defects in intrinsic and innate immunity. **a** Bacterial and parasitic infections. **b** MSMD and viral infection. AD: autosomal dominant transmission; AR: autosomal recessive transmission; BCG: Bacillus Calmette-Guerin; CD: cluster of differentiation; CMC: chronic mucocutaneous candidiasis; GOF: gain-of-function; IFNg: interferon-

gamma; HHV6: human herpes virus type 6; HPV: human papilloma virus; HSV: herpes simplex virus; LOF: loss-of-function; MSMD: Mendelian susceptibility to mycobacterial disease; NK: natural killer cells; RNA: ribonucleic acid; sd: syndrome; Tc: T cells; TLR3: Toll-like receptor type 3; VZV: varicella zoster virus; XL: X-linked transmission

VI. Defects in Intrinsic and Innate immunity. b: MSMD and Viral infection

Mendelian Susceptibility to mycobacterial disease Predominant susceptibility to viral infection (MSMD) **Predisposition to** Herpes simplex **Epidermodysplasia** Severe phenotypes. Moderate phenotypes. Severe Viral Infection **Encephalitis** verruciformis (HPV) With Susceptibility to Salmonella STAT1 Def (AR LOF). **Complete IFNGR1 Def** Dominant clinical EVER1 def. STAT1. AR. Rhinovirus and RORc deficiency. RORC AR. Susceptibility to other RNA viruses (AR,AD), TBK1 (AD), Candida. IFNg production defect, complete absence of IL-17A/F-producing Tc IRF3 (AD). JAK1 (LOF). JAK1. AR. Susceptibility to viruses, urothelial carcinoma. IFNg production.

Fig. 6 (continued)

VIIa. Auto-inflammatory disorders

Recurrent inflammation

Recurrent fever

Familial Mediterranean Fever (FMF) *.

MEFV. AR or AD

DA: 1-4 days FA: Variable.

Polyserositis, Abdominal pain, Arthritis, Amyloidosis. Erysipelas-like erythema. Predisoposes to vasculitis and inflammatory bowel disease Colchicine-responsive +++.

Mevalonate kinase def* (Hyper IgD sd).

MVK. AR

DA: 3-7 days FA: 1-2 monthly.

Cervical adenopathy. Oral aphtosis. Diarrhea. Mevalonate aciduria during attacks. Leukocytosis with high IgD levels.

TNF receptor-associated periodic syndrome; TRAPS. TNFRSF1A. AD.

DA: 1-4 weeks FA: Variable

Prolonged fever. Serositis, rash, Periorbital edema and conjunctivitis; Amyloidosis. Joint inflammation.

Systemic inflammation with urticaria rash

Familial Cold Autoinflammatory Syndrome (CAPS) * . NLRP3, NLRP12. AD GOF DA: 24-48H

Non-pruritic urticaria, arthritis, chills, fever and leukocytosis after cold exposure.

Muckle Wells syndrome (CAPS) *. NLRP3. AD GOF.

Ethnic group: North European

Continuous fever. Often worse in the evenings. Deafness (SNHL), Conjunctivitis, Amyloidosis.

Neonatal onset multisystem inflammatory disease (NOMID) or chronic infantile neurologic cutaneous and articular syndrome (CINCA) *. NLRP3. AD GOF.

Neonatal onset rash, with continuous fever and inflammation. Aseptic and chronic meningitis, Deforming arthropathy, Mental retardation. Sensorineural deafness. Visual loss.

PLAID (PLCg2 associated antibody deficiency and immune dysregulation), or APLAID*. PLC2G. AD GOF.

Cold Urticaria. Autoimmunity. Blistering skin lesion, pulmonary and bowel disease. Hypogammaglobulinemia, autoinflammation.

NLRP1 deficiency*. *NLRP1.* AR. Dyskeratosis, autoimmunity and arthritis.

A20 haploinsufficiency. *TNFAIP3*. AD LOF. Early onset systemic inflammation, Arthralgia/arthritis, oral/genital ulcers, ocular inflammation.

Others

CANDLE sd (chronic atypical neutrophilic dermatitis with lipodystrophy).

PSMB8, AR and AD. (Variants in *PSMB4, PSMB9, PSMA3,* and *POMP*)

Contractures, panniculitis, ICC, fevers.

COPA defect. COPA. AD

Autoimmune inflammatory arthritis and interstitial lung disease with Th17 dysregulation and autoantibody production

NLRC4-MAS (macrophage activating syndrome)*. NLRC4.

AD GOF.

Severe enterocolitis and macrophage activation syndrome (HLH). Triggered by cold exposure.

Fig. 7 a, b Autoinflammatory disorders. *Diseases affecting the inflammasome. AD: autosomal dominant transmission; AR: autosomal recessive transmission; BSN: bilateral striatal necrosis; CAPS: cryopirinassociated periodic syndrome; DA: duration of inflammation episode; FA: frequency of inflammation episode; FCL: familial chilblain lupus; GOF: gain-of-function; HLH: hemophagocytic lymphohistiocytosis;

HSM: hepatosplenomegalia; ICC: intracranial calcifications; IL: interleukin; LOF: loss-of-function; sd: syndrome; SLE: systemic lupus erythematosus; SMS: Singleton-Merten syndrome; SNHL: sensorineural hearing loss; SP: spastic paraparesis; TORCH: toxoplasmosis, other, rubella, cytomegalovirus, and herpes infections

VIIb. Auto-inflammatory disorders

Sterile inflammation (skin / bone / joints)

Predominant on the bone / joints

Pyogenic sterile arthritis, pyoderma gangrenosum, acne (PAPA) syndrome, hyperzincemia and hypercalprotectinemia. *PSTPIP1* (*C2BP1*). AD

DA: 5 days FA: Fixed interval: 4-6 weeks

Sterile pyogenic arthritis, Pyoderma gangrenosum, inflammatory skin rash, Myositis. Acute-phase response during attacks

Chronic recurrent multifocal osteomyelitis and congenital dyserythropoietic anemia (Majeed syndrome). *LPIN2*. AR

DA: Few days FA: 1-3 / month

Chronic recurrent multifocal osteomyelitis, severe pain, tender soft tissue swelling, Transfusion-dependent anemia, cutaneous inflammatory disorders

DIRA (Deficiency of the Interleukin 1 Receptor Antagonist). *IL1RN*. AR Continuous inflammation.

Neonatal onset of sterile multifocal osteomyelitis, periostitis and pustulosis.

Cherubism. SH3BP2.

AR.

Bone degeneration in jaws

Predominant on the skin

Blau syndrome. *NOD2* (CARD15). AD. Continuous inflammation.

Uveitis, Granulomatous synovitis, Camptodactyly, Rash, Cranial neuropathies, 30% develop Crohn colitis. Sustained modest acute-phase response.

CAMPS. CARD14. AD. Psoriasis.

DITRA. (Deficiency of IL-36 receptor antagonist). *II-36RN*. AR

Life-threatening, multisystemic inflammatory disease characterized by episodic widespread, pustular psoriasis, malaise, and leukocytosis.

ADAM17 deficiency. ADAM17. AR.

Early-onset pustular dermatitis, short and broken hair, paronychia, frequent cutaneous bacterial infections, and Early onset diarrhea , high IL-1 and IL-6 production. Lack of TNF- α was considered partly responsible for their increased susceptibility to infection and development of cardiomyopathy.

SLC29A3 mutation. SLC29A3 . AR.

Hyperpigmentation hypertrichosis, Rosai-Dorfman like histiocytosis-lymphadenopathy plus H

Otulipenia/ORAS. OTULIN. AR.

Arthralgia, Fever, diarrhea, dermatitis. Lipodystrophy, myalgia, Neutrophilia

AP1S3 deficiency. AP1S3. AR.

Pustular psoriasis

Type 1 Interferonopathies

Progressive encephalopathy, ICC, Cerebral atrophy, HSM, leukodystrophy , Thrombocytopenia, Elevated hepatic transaminases . Chronic cerebrospinal fluid (CSF) lymphocytosis

Aicardi-Goutieres syndrome.

TREX1 AR-AD (+SLE, FCL), RNASEH2A, RNASEH2B (+SP), RNASEH2C, SAMHD1 (+ Skin vascularitis, mouth ulcers, arthropathy, FCL), ADAR1 (+BSN, SP), IFIH1 GOF AD (+SLE, SP, SMS)

Spondyloenchondro-dysplasia with dysregulation (SPENCD). ACP5.

with immune

Possibly recurrent bacterial and viral infections, SLE-like auto-immunity (Sjögren's syndrome, hypothyroidism, inflammatory myositis, Raynaud's disease and vitiligo), hemolytic anemia, thrombocytopenia, skeletal dysplasia, short stature, SP, ICC.

STING-associated vasculopathy, infantile-onset.

TMEM173. Early-onset inflammatory disease, Skin vasculopathy, inflammatory lung disease, systemic autoinflammation and ICC, FCL.

ADA2 deficiency. CECR1. Polyarteritis nodosa, childhoodonset, early-onset recurrent ischemic stroke and fever, Livedo racemosa, low IgM, Hypogammagl, Lymphopenia

XL reticulate pigmentary disorder. *POLA1*. Hyperpigmentation, reticulate pattern. Inflammatory lung and Gastroenteritis or colitis. Corneal scarring, characteristic facies

USP18 def . USP18. TORCH like syndrome.

Fig. 7 (continued)

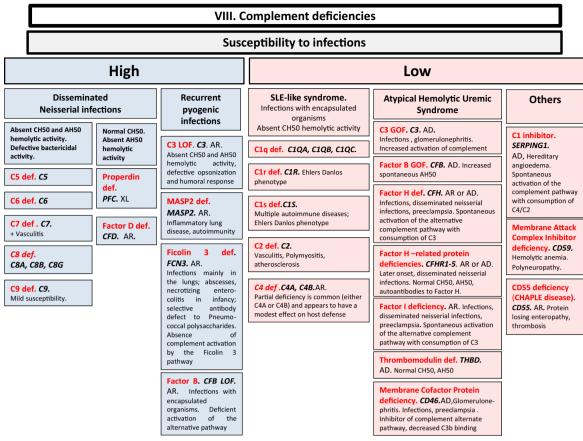

Fig. 8 Complement deficiencies. AD: autosomal dominant transmission; AH50: alternate pathway hemolytic activity; AR: autosomal recessive transmission; CH50: complement hemolytic activity; def: deficiency;

LOF: loss-of-function; sd: syndrome; SLE: systemic lupus erythematosus; XL: X-linked transmission

Fig. 9 Phenocopies of PID. ALPS: autoimmune lymphoproliferative syndrome; AutoAb: auto-antibodies; CID: combined immunodeficiency; CMC: chronic mucocutaneous candidiasis; GOF: gain-offunction; MSMD: Mendelian susceptibility to mycobacterial disease; PRCA: pure red cell aplasia

IX. Phenocopies of PID **Associated with** Associated with **Somatic Mutations Auto-Antibodies** Chronic mucocutaneous candidiasis (isolated or with APECED Splenomegaly, lymphadenopathy, syndrome). AutoAb to IL-17 and/or IL-22. autoimmune cytopenias. Defective lymphocyte apoptosis. Endocrinopathy, chronic mucocutaneous candidiasis /CMC. Germline mutation in AIRF (somatic mutations in TNFRSF6)/ ALPS-FAS (ALPS type Im) Adult-onset immunodeficiency with susceptibility to mycobacteria. Auto-Ab to IFNg. Mycobacterial, fungal, salmonella, VZV infections / MSMD or CID. disease. (ALPS Like); N-RAS GOF, K-RAS GOF Sporadic; granulocytosis, monocytosis/ALPS-like Recurrent skin infection. AutoAb to IL-6. Cryopyrinopathy, (Muckle-Wells /CINCA/NOMID-like Staphylococcal infections / STAT3 deficiency syndrome). NRLP3. Pulmonary alveolar proteinosis . AutoAb to GM-CSF. Urticaria-like rash, arthropathy, neurological symptoms Pulmonary alveolar proteinosis, cryptococcal meningitis. disseminated nocardiosis/CSF2RA deficiency Hypereosinophilic syndrome due to somatic mutations in Acquired angiooedema. AutoAb to C1 inhibitor. STAT5b. STAT5b. GOF. Angioedema /C1 inhibitor deficiency Atopic dermatitis, urticarial rash, diarrhea, Eosinophilia, Atypical Hemolytic Uremic Syndrome . AutoAb to Factor H. Spontaneous activation of the alternative complement pathway Thymoma with hypogammaglobulinemia (Good syndrome). AutoAb to various cytokines. Invasive bacterial, viral or opportunistic infections, autoimmunity, PRCA, lichen planus, cytopenia, colitis, chronic diarrhea. No B cells.
