\* Associate Professor, Faculty of Law, University of Toronto. I am indebted to Assaf Likhovski, Alan Macnaughton, Richard Schmalbeck and Larry Zelenak for helpful comments on earlier drafts. I am also indebted to Doug Robertson, a J.D. student at the University of Toronto Faculty of Law, for excellent research assistance, and to the Social Science and Humanities Research Council of Canada for financial support. I would also like to thank participants at the Tel Aviv Tax Policy workshop.

## I. INTRODUCTION

When the U.S. Congress voted to phase-out the federal estate tax by 2010 and President Bush signed the legislation in June 2001,<sup>1</sup> the United States joined a small but growing number of developed countries in which taxes on the transfer of wealth have been abolished.<sup>2</sup> In Canada, federal gift and estate taxes were repealed in 1972 and provincial wealth transfer taxes were abolished in the 1970s and 1980s. In Australia, state and commonwealth wealth transfer taxes were repealed in the late 1970s and early 1980s. New Zealand followed suit in the 1990s, reducing estate tax rates to zero in 1992 and repealing the tax in 1999. While the United Kingdom continues to collect taxes on the transfer of wealth, the role of these taxes has declined substantially over the last 30 years,<sup>3</sup> and calls for repeal are often heard.<sup>4</sup> As a result, U.S. repeal should not be viewed as an isolated event, but as part of a broader international trend.

---

1. Economic Growth and Tax Relief Reconciliation Act of 2001, Pub. L. No. 107-16, § 501, 115 Stat. 38, 69 (2001). The phase-out is accomplished by increasing the exclusion amount and reducing rates between 2002 and 2009, culminating in repeal for the year 2010. Under a sunset provision, however, the legislation providing for this phase-out and repeal is itself repealed after December 31, 2010—resulting in the restoration of the tax in 2011. For a detailed description of this legislation, see Tye J. Klooster, *Repeal of the Death Tax? Shoving Aside the Rhetoric to Determine the Consequences of the Economic Growth and Tax Relief Reconciliation Act of 2001*, 51 *DRAKE L. REV.* 633, 633-65 (2003). According to one commentator, “[t]he fact that there will be two presidential and four congressional elections before the estate tax is fully repealed means that it is possible that the repeal will never happen at all or that the sunset provision will stand and the estate tax will return in 2011.” Mary R. Wampler, *Repealing the Federal Estate Tax: Death to the Death Tax, or Will Reform Save the Day?*, 25 *SETON HALL LEGIS. J.* 525, 534 (2001). For a useful explanation of the budget process that led to the sunset provision and the budgetary implications of permanent repeal, see Karen C. Burke & Grayson M.P. McCouch, *Estate Tax Repeal and the Budget Process*, 104 *TAX NOTES* 1049, 1049-57 (2004).

2. For an excellent account of the events leading up to repeal in the United States, see MICHAEL J. GRAETZ & IAN SHAPIRO, *DEATH BY A THOUSAND CUTS: THE FIGHT OVER TAXING INHERITED WEALTH* 4 (2005). For a recent argument that Congress might benefit from uncertainty regarding repeal of the federal gift and estate taxes, see Edward J. McCaffery & Linda R. Cohen, *Shakedown at Gucci Gulch: A Tale of Death, Money and Taxes* (Univ. S. Cal. Law & Econ. Research Paper No. 04-20, 2004), available at <http://ssrn.com/abstract=581084>.

3. See ORG. FOR ECON. COOPERATION & DEV., *REVENUE STATISTICS OF O.E.C.D. COUNTRIES* (2003) [hereinafter O.E.C.D.]. In 1972, estate and gift taxes accounted for 2.3% of total revenues in the United Kingdom and 0.7% of gross domestic product; in 2002, these figures were 0.6% and 0.2%, respectively.

4. See, e.g., BARRY BRACEWELL-MILNES, *EUTHANASIA FOR DEATH DUTIES: PUTTING INHERITANCE TAX OUT OF ITS MISERY* (2002).

Whatever the advantages or disadvantages of these taxes,<sup>5</sup> commentators are often puzzled by the apparent political vulnerability of wealth transfer taxes since they generally apply only to a small percentage of substantial estates.<sup>6</sup> For some, political opposition to these taxes stems from psychological factors, such as the association between the tax and death,<sup>7</sup> or an irrational optimism on the part of many people that they will actually be subject to the tax.<sup>8</sup> For others, it is largely ideological, reflecting a conservative emphasis on individual enterprise and an increased hostility to redistributive taxation.<sup>9</sup> Although conservative electoral victories have certainly contributed to the decline of wealth transfer taxes,<sup>10</sup> more progressive political parties have also been willing to abandon these taxes and have been reluctant to restore them once repealed.<sup>11</sup>

---

5. The merits of these taxes are widely disputed. Advocates tend to emphasize their contribution to tax progressivity, their social role to lessen inequalities and unequal opportunities, and their assumed economic superiority to income taxes. See, e.g., JOSEPH A. PECHMAN, *FEDERAL TAX POLICY* 234 (5th ed. 1987) (commenting that wealth transfer taxes have "less adverse effects on incentives than do income taxes of equal yield"); Michael J. Graetz, *To Praise the Estate Tax, Not to Bury It*, 93 *YALE L.J.* 259 (1983); Eric Rakowski, *Transferring Wealth Liberally*, 51 *TAX L. REV.* 419 (1996). Critics, on the other hand, condemn their relatively low revenue yield, high collection costs, avoidability, and alleged impact on savings and entrepreneurship. See, e.g., RICHARD E. WAGNER, *DEATH AND TAXES: SOME PERSPECTIVES ON INHERITANCE, INEQUALITY, AND PROGRESSIVE TAXATION* 23-30 (1973); Joel C. Dobris, *A Brief for the Abolition of All Transfer Taxes*, 35 *SYRACUSE L. REV.* 1215 (1984); Edward J. McCaffery, *The Political Liberal Case Against the Estate Tax*, 23 *PHILOS. & PUB. AFF.* 281 (1994); Edward J. McCaffery, *The Uneasy Case for Wealth Transfer Taxation*, 104 *YALE L.J.* 283 (1994). For my own views on wealth transfer taxation, see David G. Duff, *Taxing Inherited Wealth: A Philosophical Argument*, 6 *CAN. J.L. & JURIS.* 3 (1993).

6. In the United States, for example, only 4.3% of decedents were required to file estate tax returns in 1998, and only half of these were required to pay any tax. See WILLIAM G. GALE & JOEL SLEMROD, *Overview to RETHINKING ESTATE AND GIFT TAXATION* 7-9 (William G. Gale et al. eds., 2001). In the United Kingdom, it is estimated that only 3.5-4% of estates pay inheritance tax. See DOMENIC MAXWELL, *FAIR DUES: TOWARDS A MORE PROGRESSIVE INHERITANCE TAX* 11 (2004).

7. See, e.g., Richard Bird, *The Taxation of Personal Wealth in International Perspective*, 17 *CAN. PUB. POL'Y* 322, 330 (1991) (pointing to "the conjunction of two events [death and taxes] that few people contemplate with pleasure . . .").

8. See, e.g., Graetz, *supra* note 5, at 285.

9. See, e.g., Keith G. Banting, *The Politics of Wealth Taxes*, 17 *CAN. PUB. POL'Y* 351, 364 (1991); see also EDWARD J. MCCAFFERY, *FAIR NOT FLAT: HOW TO MAKE THE TAX SYSTEM BETTER AND SIMPLER* 66 (2003) (suggesting that wealth transfer taxes contradict "common-sense morality"). For a detailed study of the relationship between ideological perspectives and wealth transfer taxes in Canada, see Lisa Philipps, *Taxing Inherited Wealth: Ideologies About Property and the Family in Canada* (March 1992) (unpublished LL.M. thesis, Osgoode Hall Law School) (on file with author).

10. In the United States, for example, Republican control of the Congress and the White House precipitated repeal of the federal estate tax in 2001. See GRAETZ & SHAPIRO, *supra* note 2, at 4. Likewise, in Australia, electoral victory by the Liberal Party under Malcolm Fraser preceded the repeal of the federal estate tax effective July 1, 1979. See *infra* text accompanying note 280.

11. In Canada, for example, it was the Liberal Party under Prime Minister Pierre Trudeau which

In addition to these explanations for the decline and repeal of wealth transfer taxes, public choice theory provides an alternative account, emphasizing the political costs and benefits of different tax policies and the tendency for electoral competition to promote "political efficiency" in the revenue structures adopted by governments over time.<sup>12</sup> To the extent that wealth transfer taxes entail greater political costs and fewer perceived benefits than other tax measures yielding comparable revenue yields, it is not surprising that they might be politically vulnerable.

This article examines the abolition of wealth transfer taxes in Canada, Australia, and New Zealand, relying on public choice theories of politically efficient revenue structures to help explain the repeal of these taxes in each country. Part II outlines the essential elements of this theoretical approach and its implications for tax policy. Part III surveys the history of wealth transfer taxes in Canada, Australia, and New Zealand, examining in detail the events leading up to the repeal of these taxes and illustrating the relevance of public choice theory to their abolition in each country. Part IV offers brief conclusions on the significance of this experience for the future of wealth transfer taxation.

## II. PUBLIC CHOICE THEORY AND TAX POLICY

In the fields of public finance and tax policy, much writing is essentially normative, establishing criteria for an ideal tax structure and evaluating actual tax regimes against this ideal.<sup>13</sup> In contrast, public choice theories of politically efficient revenue structures are largely positive, attempting to explain the kinds of tax structures and tax reforms that actually exist in

---

repealed the federal gift and estate taxes in 1971, notwithstanding that Trudeau had campaigned and won the 1968 election by promising a "Just Society." Similarly, in Australia, Labor Prime Minister Gough Whitlam promised to abolish federal death duties in 1975 in an unsuccessful bid to stay in office. In the United States as well, as Graetz and Shapiro document, Democrats have been reluctant to defend the estate tax. See GRAETZ & SHAPIRO, *supra* note 2, at 5.

12. See, e.g., W. IRWIN GILLESPIE, *TAX, BORROW AND SPEND: FINANCING FEDERAL SPENDING IN CANADA, 1867-1990* (1991); WALTER HETTICH & STANLEY L. WINER, *DEMOCRATIC CHOICE AND TAXATION: A THEORETICAL AND EMPIRICAL ANALYSIS* (1999).

13. This is true of traditional public finance as well as more recent theories of optimal taxation. See, e.g., RICHARD A. MUSGRAVE ET AL., *PUBLIC FINANCE IN THEORY AND PRACTICE* (1987); James A. Mirrlees, *An Exploration in the Theory of Optimum Income Taxation*, 38 *REV. ECON. STUD.* 175 (1971). It is also true of much legal tax scholarship, particularly scholarship based on the Haig-Simons concept of income and the concept of tax expenditures pioneered by Stanley Surrey. See HENRY C. SIMONS, *PERSONAL INCOME TAXATION: THE DEFINITION OF INCOME AS A PROBLEM OF FISCAL POLICY* (1938); STANLEY S. SURREY, *PATHWAYS TO TAX REFORM: THE CONCEPT OF TAX EXPENDITURES* (1973).

modern democratic societies.<sup>14</sup> The following sections provide a brief introduction to this theoretical approach, explaining the main determinants of political efficiency within this framework and the manner in which political efficiency is apt to be pursued through tax policy.

### *A. Public Choice and Political Efficiency*

Public choice theory has been defined as "the economic study of nonmarket decision making" or "the application of economics to political science."<sup>15</sup> As such, it concerns itself with traditional topics of political science such as voting behavior, party politics, and interest group activities, but examines these phenomena through the lens of economic methodology premised on rational choice subject to constraints.<sup>16</sup> As economic analysis predicts that a perfectly competitive market tends toward an equilibrium at which economic resources are efficiently allocated, so public choice theory predicts that competition among political parties tends toward a political equilibrium where public policies assume a politically efficient form.<sup>17</sup> In order to understand this concept of political efficiency and the form that it is likely to take, it is useful to examine the motivations and constraints that public choice theory assigns to the central actors in the political process: voters, politicians and political parties, and organized interest groups.<sup>18</sup>

#### *1. Voters*

The starting point for a public choice theory of political efficiency is a set of assumptions regarding voters and the reasons why they vote. Sharing with economic theory the premise that individuals are rational utility maximizers,<sup>19</sup>

---

14. GILLESPIE, *supra* note 12, at 14-17. Not surprisingly, of course, these positive theories may have normative implications regarding, for example, constitutional arrangements regarding the manner in which revenue decisions are made. See, e.g., JAMES M. BUCHANAN & GORDON TULLOCK, *THE CALCULUS OF CONSENT: LOGICAL FOUNDATIONS OF CONSTITUTIONAL DEMOCRACY* 297-306 (1962); see also GILLESPIE, *supra* note 12, at 17 (suggesting that "a positive model of revenue structure could assist those of us who advise governments on the tax changes that ought to be made.").

15. DENNIS C. MUELLER, *PUBLIC CHOICE II*, at 1 (1989).

16. *Id.* at 1-2.

17. GILLESPIE, *supra* note 12, at 16; HETTICH & WINER, *supra* note 12, at 2.

18. Although it is not essential for the purpose of this article, many public choice theories also consider the behavior of the bureaucracy and the mass media. See, e.g., DOUGLAS G. HARTLE, *CANADIAN TAX PAPER NO. 81, THE EXPENDITURE BUDGET PROCESS OF THE GOVERNMENT OF CANADA: A PUBLIC CHOICE-RENT-SEEKING PERSPECTIVE* 35-68 (1988).

19. See, e.g., MUELLER, *supra* note 15, at 2.

public choice theory postulates that voters will generally cast their ballots for candidates and political parties whose policies are expected to maximize their net utility.<sup>20</sup> In the context of government expenditure and revenue policies, public choice theory generally assumes that voters will favor candidates and political parties whose policies are expected to maximize the benefits that they receive from government expenditures while minimizing the taxes that they are required to pay.<sup>21</sup> Voters may also favor certain kinds of taxes over others, notwithstanding that amounts owing are the same, suggesting that differential preferences for different kinds of taxes may also play a role in voting decisions.<sup>22</sup>

In addition to the hypothesis that voters will select candidates and political parties whose policies are expected to maximize the voters' own net utility, public choice theory also predicts that voting decisions are generally based on limited knowledge of actual policies and their likely consequences. Since the time and effort to obtain this information is considerable, and the probability of one's vote affecting the outcome of an election is negligible, public choice theory predicts that most voters will remain "rationally ignorant" of most policies—ignoring specific details and basing their choices on perceived impacts on net utility as well as more general perceptions of trustworthiness and feelings of emotional attachment.<sup>23</sup> In the field of tax policy, this phenomenon is likely to be particularly pronounced given the complexity of the issues involved.<sup>24</sup> Since the expected benefits of acquiring

---

20. For an early expression of this rational voter hypothesis, see ANTHONY DOWNS, *AN ECONOMIC THEORY OF DEMOCRACY* (1957); see also WILLIAM RIKER & PEDER ORDESHOOK, *INTRODUCTION TO POSITIVE POLITICAL THEORY* (1973); GORDON TULLOCK, *TOWARDS A MATHEMATICS OF POLITICS* 110-14 (1967). While the concept of "utility" for this purpose might be broadly defined to include an inter-subjective interest in the welfare of others or a Kantian concern with just social institutions, public choice theory tends to ignore this possibility by assuming an egoistic conception of human beings and a narrow and self-interested notion of utility.

21. See GILLESPIE, *supra* note 12, at 17 (explaining that political parties in the pursuit of electoral victory attempt to "maximize the political benefits from spending and minimize the political costs of financing the spending . . .").

22. *Id.* at 26-27. To the extent that differential preferences for different kinds of taxes reflect notions of tax fairness, the recognition of these tax preferences as a factor in voting decisions suggests that voters may be motivated by something other than self-interest narrowly understood. For an attempt to rationalize ideas of tax fairness in terms of utility maximization, see DOUGLAS G. HARTLE, *DISCUSSION PAPER NO. 290, POLITICAL ECONOMY OF TAX REFORM: SIX CASE STUDIES* 52-54 (1985).

23. See DOWNS, *supra* note 20, at 207-37.

24. See Banting, *supra* note 9, at 353 (emphasizing that "[m]ost voters are not well-informed about the complex world of taxation. There is limited understanding not only of technical language and abstract concepts such as equity, but also of elementary issues such as whether one would benefit from a specific proposal."); Douglas G. Hartle, *Some Analytical, Political and Normative Lessons from Carter*, in *THE QUEST FOR TAX REFORM* 415 (W. Neil Brooks ed., 1988) (suggesting that most voters' perceptions of their

information are greater where policies touch on voters' most immediate interests, however, voters are likely to devote more resources to inform themselves about these measures.<sup>25</sup> As a result, affluent individuals and corporations can be expected to be much better informed and well-advised than most about the taxes they pay and about the tax policies proposed by politicians and political parties.<sup>26</sup>

Not surprisingly, critics have challenged as limited and unrealistic both the self-interested view of voting that public choice theory assumes and the egoistic conception of human beings on which it is based.<sup>27</sup> Indeed, since it is irrational to expect that a single vote will affect the outcome of an election, the very act of voting itself suggests that voters must be motivated by considerations other than self-interested utility maximization narrowly defined.<sup>28</sup> While one might attempt to rescue the theory of self-interested voting by assuming a psychological benefit from the act of voting,<sup>29</sup> or distinguishing the (unselfish) decision to vote from the (selfish) choice of candidate or political party, it seems more realistic to admit that altruistic and ethical motivations are likely to mix with more selfish considerations when voters cast their ballots.<sup>30</sup> At the same time, the theory that most voters remain rationally ignorant of actual policies calls into question the significance of their votes for public policy more generally.<sup>31</sup>

own interests "are, more likely than not, seriously flawed when it comes to the details of the tax structure as a whole").

25. HARTLE, *supra* note 22, at 25.

26. See Banting, *supra* note 9, at 353 (observing that "those with a large stake in tax battles inform themselves and equip themselves with a phalanx of professional advisors").

27. See Herbert Hovenkamp, *Legislation, Well-Being, and Public Choice*, 57 U. CHI. L. REV. 63, 85-89 (1990); Joseph P. Kalt & Mark A. Zupan, *Capture and Ideology in the Economic Theory of Politics*, 74 AM. ECON. REV. 279 (1984). For more general criticisms of public choice theory, see DANIEL A. FARBER & PHILIP P. FRICKEY, *LAW AND PUBLIC CHOICE: A CRITICAL INTRODUCTION* (1991); Mark Kelman, *On Democracy-Bashing: A Skeptical Look at the Theoretical and 'Empirical' Practice of the Public Choice Movement*, 74 VA. L. REV. 199 (1988).

28. For a discussion of this "paradox" of voting, see MUELLER, *supra* note 15, at 348-72.

29. See, e.g., Daniel Shaviro, *Beyond Public Choice and Public Interest: A Study of the Legislative Process as Illustrated by Tax Legislation in the 1990s*, 139 U. PENN. L. REV. 1, 77 (1990) (suggesting that the act of voting can be understood as a source of utility in itself, "involving symbolic or expressive behavior").

30. See, e.g., HOWARD MARGOLIS, *SELFISHNESS, ALTRUISM, AND RATIONALITY* (1982); Amitai Etzioni, *The Case for a Multiple Utility Conception*, 2 ECON. & PHIL. 159 (1986); Robert E. Goodin & Kevin W.S. Roberts, *The Ethical Voter*, 69 AM. POL. SCI. REV. 926 (1975).

31. See, e.g., Geoffrey Brennan & James M. Buchanan, *Voter Choice: Evaluating Political Alternatives*, 28 AM. BEHAV. SCI. 185 (1984) (arguing that voting decisions are primarily expressive or symbolic rather than instrumental).

While these criticisms undoubtedly lessen the predictive power of public choice theory to some extent, they do not render it worthless. On the contrary, although it is probably mistaken to assume that altruistic and ethical motivations play no role in voting decisions, it is also likely that selfish considerations have a significant effect on the choices that are ultimately made. Similarly, while imperfect information weakens the link between voting decisions and public policy outcomes, it seems unlikely that voters will systematically ignore their own interests on a consistent basis, and it is important to recognize that voters are likely to be more knowledgeable about policies affecting their most immediate interests. For these reasons, the basic premise of public choice theory that voters will tend to favor candidates and political parties whose policies are perceived to maximize their net utility is likely to have considerable predictive value, notwithstanding the phenomenon of rational ignorance and the narrow conception of human motivation on which public choice theory is based.

## 2. *Politicians and Political Parties*

For public choice theory, politicians and political parties, like voters, are also assumed to be rational utility maximizers.<sup>32</sup> Unlike voters, however, who pursue this goal by casting ballots for candidates and political parties whose policies are perceived to maximize their net utility, politicians and political parties are presumed to maximize their utility by winning elections.<sup>33</sup> Since voters are assumed to favor candidates and political parties whose policies are expected to maximize their net utility, it follows that elections are most likely to be won by politicians and political parties whose platforms are perceived to maximize the net utility of the largest number of voters.<sup>34</sup> However, because voter preferences are not immediately transparent to politicians and political parties, and voters themselves are generally unfamiliar with specific policies, public choice theory also predicts that politicians and political parties can increase the likelihood of electoral success by employing strategies and obtaining resources that enable them to better discern voter preferences (e.g., by consulting with interest groups, polling, and pre-testing policies with focus

---

32. MUELLER, *supra* note 15, at 179.

33. See, e.g., DOWNS, *supra* note 20, at 28.

34. See, e.g., MUELLER, *supra* note 15, at 214 (suggesting that "competition for votes between candidates leads them 'as if by an invisible hand' to platforms that maximize social welfare").

groups) and to promote their policies and images (e.g., through media exposure and advertising).<sup>35</sup>

As with public choice theory of voting behavior, critics have also questioned the assumption that politicians and political parties are driven solely by the goal of electoral success.<sup>36</sup> Ideological objectives, for example, are undoubtedly also present, as politicians and political parties certainly seek to influence voters' perceptions of their own best interests in order to win elections and to shape public policy outcomes according to their ideological preferences once in government or in opposition.<sup>37</sup> More sophisticated public choice theories of politicians and political parties should also account for different institutions and electoral rules which may create different strategies for electoral success.<sup>38</sup> In countries with proportional representation, for example, parties and politicians may pursue a narrow voting base instead of a majority block.

Notwithstanding other motivations, however, the logic of electoral competition suggests that politicians and political parties will over time not only seek electoral success, but will also devise campaign strategies and political platforms designed to appeal to the largest number of voters.<sup>39</sup> Through a process of "natural selection," therefore, one can expect that public policies in a democratic society will tend toward political efficiency.<sup>40</sup>

### 3. Organized Interest Groups

Interest groups constitute a third group of political actors who are central to public choice theories of political efficiency. Unlike voters and politicians, who are assumed to maximize their own individual utilities, interest groups are assumed to promote the common interests of their members.<sup>41</sup> This is accomplished by informing members about public policy issues affecting their interests,<sup>42</sup> lobbying politicians and political parties in order to obtain policies

---

35. For a discussion of "probabilistic voting," see *id.* at 196-216.

36. See, e.g., Shaviro, *supra* note 29, at 81-87.

37. For an analysis of ideology, see MUELLER, *supra* note 15, at 286-301.

38. See *id.* at 217-28.

39. See, e.g., HARTLE, *supra* note 18, at xviii-xix (noting that when policies are politically inefficient, "there is an opportunity afforded the opposition parties to form a new coalition that will gain power at the expense of the ruling coalition").

40. See, e.g., Shaviro, *supra* note 29, at 88 (referring to a process of "natural selection" that can play a role notwithstanding the motivations of some politicians or political parties).

41. See, e.g., MANCUR OLSON, *THE LOGIC OF COLLECTIVE ACTION* 5-8 (8th prtg. 1980).

42. See, e.g., HARTLE, *supra* note 18, at 62-63 (referring to this as the "intelligence function" of

favorable to members,<sup>43</sup> and promoting policies that advance the common interests of members through direct advertising and the mass media.<sup>44</sup> As a general rule, these services take the form of public or collective goods, the benefits from which cannot easily be limited to those who are willing to incur their costs through membership.<sup>45</sup>

Of particular importance to public choice theory is the existence of information and transactions costs and collective action (free-rider) problems that affect the likelihood that persons with common interests will establish and maintain an organized entity to promote their interests. Because persons are expected to be better informed about matters affecting their most immediate interests than about more general or public interests, public choice theory predicts that narrow or special interests will be better represented by organized interest groups than more general and public interests. Moreover, since the costs to establish and maintain an organized group and the incidence of free-riders are likely to increase as the number of potential members increases, public choice theory also predicts that relatively small numbers of persons with common interests are more likely to be represented by organized interest groups than large numbers of persons with common interests.<sup>46</sup> In the field of tax policy, these considerations suggest that relatively small groups of taxpayers with common interests are much more likely to exercise political influence through organized interest groups than large groups of taxpayers with more diffuse interests.<sup>47</sup>

#### 4. Public Policy and Political Efficiency

The motivations and constraints that public choice theory assigns to the central actors in the political process influence not only their expected behavior within this framework, but also the kinds of public policies that are

---

organized interest groups).

43. *Id.* at 61 (observing that this lobbying generally involves the provision of information or funding); see also MUELLER, *supra* note 15, at 205 (noting that interest groups "try to increase the welfare of their membership by reducing candidate uncertainty over how their membership votes").

44. See, e.g., HARTLE, *supra* note 18, at 61 (referring to "costly publicity campaigns designed to convince tens of thousands of voters to support a desired candidate or party on a desired policy decision."); Hartle, *supra* note 24, at 414 (emphasizing the "capacity of special interest groups to influence the mass media").

45. OLSON, *supra* note 41, at 15.

46. See, e.g., *id.* at 46-52 (describing large unorganized interest groups as "latent" groups).

47. See, e.g., Banting, *supra* note 9, at 353; Hartle, *supra* note 24, at 413-15 (emphasizing the influence of narrow and special interest groups in tax policy).

likely to maximize political efficiency. Since voters are predicted to be better informed about matters that touch on their immediate interests and less knowledgeable about other issues, for example, public choice theory suggests that political efficiency may be achieved by targeting government benefits to groups of voters who are apt to be well-informed about the benefits that they receive while distributing the related costs widely among groups of voters who are less likely to perceive the burdens that they bear.<sup>48</sup> The more complex the nature of the specific policy, moreover, the less likely it is that those who bear these costs will perceive the burden, lessening further the political costs of the policy.<sup>49</sup> Differential transaction costs and collective action problems suggest a similar strategy for politically efficient public policies, involving the conferral of benefits on selected groups of voters who are well-represented by organized interest groups, and the allocation of related costs among more diffuse groups of voters for whom the financial and organizational barriers to collective political action are much greater.<sup>50</sup> As a result, as Mancur Olson emphasized, differential information and organizational costs create “a systematic tendency for ‘exploitation’ of the great by the small!”<sup>51</sup>

### B. Political Efficiency and Tax Policy

If voters regard benefits from government expenditures as utility enhancing and taxes as utility reducing, the pursuit of political efficiency suggests that governments will attempt to maximize the political benefits from spending programs and minimize the political costs from the taxes necessary to finance these programs.<sup>52</sup> For a given level of government expenditure, therefore, a politically efficient revenue structure will minimize the political costs associated with each tax—utilizing each revenue source, as one theorist explains, “up to the point at which the marginal political cost is equal for all such sources.”<sup>53</sup> Over time, moreover, a tendency toward political efficiency suggests that governments will increase and decrease tax rates on specific

revenue sources as relative political costs change, introduce new taxes when the political costs of so doing are less than the political costs from increasing the rate of an existing tax, and repeal old taxes when their political costs exceed those associated with other taxes.<sup>54</sup> The key questions for a public choice theory of tax policy, therefore, concern the factors that affect the political costs of different taxes and the reasons why these political costs change over time.

Beginning with the factors affecting the political costs of different taxes, many can be identified.<sup>55</sup> Most obviously, perhaps, the political costs of a tax can be expected to increase as its rate increases, since organized opposition to the tax is increasingly cost-justified as tax burdens increase.<sup>56</sup> The same reason also suggests that the political costs of a tax will increase as the costs to comply with the tax increase.<sup>57</sup> Political costs are also likely to increase as costs to administer the tax increase, since diminished net revenues attributable to higher administrative costs necessitate higher tax rates or other taxes to maintain revenues—both of which involve political costs.<sup>58</sup> Conversely, the political costs of a tax tend to be lower where the number of taxpayers is large, since the burden is spread widely and the costs of organized opposition substantial.<sup>59</sup> As the number of taxpayers affected by an established tax increases, however, political costs can be expected to increase because groups opposing the tax are likely to attract new members.<sup>60</sup>

Other important determinants of the political costs of taxes include vertical tax competition (the occupation of the same revenue source by

---

54. *Id.*

55. For more general discussions, see *id.* at 20-32; HARTLE, *supra* note 22, at 41-54. The factors considered in the Hartle text are by no means comprehensive, omitting, for example, several factors discussed in GILLESPIE, *supra* note 12. Indeed, Gillespie himself emphasizes that "[t]here may well be . . . determinants of political costs" other than those that he identifies, and explains that "[t]he model is general enough to permit the appropriate adaptations." *Id.* at 31. For the purpose of this article, I discuss only those factors that seem most relevant to the decline and abolition of wealth transfer taxes, particularly in Canada, Australia, and New Zealand.

56. GILLESPIE, *supra* note 12, at 21. To the extent that adverse economic consequences associated with different taxes increase as rates increase, this effect is a further reason why the political costs of a tax are likely to increase as its rate increases.

57. *Id.* at 29-30; HARTLE, *supra* note 22, at 52 (observing that higher compliance costs "can be thought of as an increase in the tax burden").

58. GILLESPIE, *supra* note 12, at 29-30; HARTLE, *supra* note 22, at 52.

59. GILLESPIE, *supra* note 12, at 22-23; HARTLE, *supra* note 22, at 48. The political costs of a tax may also be reduced by introducing concessions for narrow and special interest groups who are generally well-informed about taxes that affect them and already represented by organized interest groups. On the politically efficient use of tax concessions, see HARTLE, *supra* note 22, at 37-39.

60. GILLESPIE, *supra* note 12, at 22-23.

different levels of government in a federal system), horizontal tax competition (the pursuit of mobile revenue sources by different national or sub-national governments), and base elasticity (the extent to which revenues automatically increase with economic growth). In principle, the occupation of a revenue source by one level of government tends to increase the political cost of its imposition by another level of government. Because at least some organized opposition to the tax is likely to exist already, the collection of tax by the second government increases the effective rate of the tax, and the first government itself can be expected to oppose the measure.<sup>61</sup> Political costs are also high for mobile revenue sources, since those subject to the tax may threaten to or actually relocate these sources to jurisdictions with lower taxes, thereby depriving the higher-tax jurisdiction of revenue and economic activity.<sup>62</sup> Base elasticity, on the other hand, decreases the political costs of a tax, since economic growth allows governments to increase spending without having to increase effective tax rates.<sup>63</sup>

A final factor affecting the political costs of taxes is what W. Irwin Gillespie describes as “tax preference”—a preference for one kind of tax versus another notwithstanding that amounts owing under each tax would be identical.<sup>64</sup> While different tax preferences might turn on compliance costs or other nonrevenue impacts,<sup>65</sup> they might also depend on judgments about the appropriateness or fairness of alternative revenue sources.<sup>66</sup> As Gillespie explains, a preference for one tax over another “could arise because one revenue source is judged by citizens to be the product of their own, meritorious efforts (say, labor income), whereas another revenue source is judged not to be the result of hard work (say, an inheritance, a gift or a lottery

---

61. *Id.* at 27-28; see also HARTLE, *supra* note 22, at 49 (explaining that governments are likely to oppose occupation of the same revenue source by another level of government because “taxpayers may incorrectly assign the ‘blame’ to the ‘wrong’ government; second, taxpayer opposition probably mounts exponentially as effective rates rise on a given base [so that] the political costs of future revenue increases by the ‘prior’ occupant are raised even further; [and] thirdly, with higher tax rates evasion and avoidance becomes increasingly attractive and enforcement costs are raised”).

62. GILLESPIE, *supra* note 12, at 28-29.

63. *Id.* at 30.

64. *Id.* at 26 (hypothesizing that voters “may not be indifferent between two revenue sources, for each of which the tax per dollar’s worth of tax base could be equal for a given taxpayer”).

65. See, e.g., *id.* (suggesting that different tax preferences “could arise because verification of one revenue source interferes more directly in the conduct of a citizen’s affairs (say, a direct tax on incomes, compared with an indirect tax on imports”).

66. *Id.* at 27 (noting that voters may be less politically opposed to taxes that are perceived to be fair than they are to taxes that are perceived to be unfair).

win).<sup>67</sup> Alternatively, he suggests, different tax preferences might exist “because one revenue source is judged by taxpayers to have unhealthy, immoral or sinful connotations (expenditures on alcoholic beverages and tobacco products), whereas the connotations of another revenue source are seen as healthy, moral or meritorious (expenditures on milk, footwear and clothing for children and expenditures on charitable donations).”<sup>68</sup> Whatever the reasons for these tax preferences, the political cost to introduce, maintain, or increase a tax for which a large number of voters have a lower preference will be greater than the political cost to introduce, maintain, or increase a tax for which a large number of voters have a greater tax preference.<sup>69</sup>

Having identified some of the key factors affecting the political costs of different taxes, it is possible to speculate on various reasons why these political costs might change over time. Changes in government expenditures, for example, are likely to affect the political costs of taxes—increasing these costs where rates are increased or exemptions reduced in order to finance increased spending, and decreasing these costs where spending reductions allow taxes to be cut. Actions by other governments can also affect the political costs of different taxes—increasing these costs where other levels of government introduce or increase taxes on the same revenue source, but decreasing these costs where neighboring governments at the same level introduce or increase taxes on the same revenue source. Another reason why the political costs of different taxes might change involves broader economic changes, as increasing economic integration has undoubtedly increased the political costs of taxes on mobile revenue sources. Inflation can also increase the political costs of a tax, if exemptions are not indexed or adjusted to offset their declining real value. Finally, ideological shifts are likely to change the political costs of different taxes to the extent that they influence people’s preferences for different kinds of taxes. For public choice theories of politically efficient revenue structures, however, the reasons for changes in the political costs of different taxes are considered exogenous and not themselves subjects of inquiry.

### III. WEALTH TRANSFER TAXES IN CANADA, AUSTRALIA, AND NEW ZEALAND

Wealth transfer taxes were first introduced in the Australian colonies and New Zealand in the second half of the nineteenth century<sup>70</sup> and by all Canadian provinces between the years 1892 and 1903.<sup>71</sup> In Australia and New Zealand, these taxes were generally based on the estates of persons domiciled in the taxing jurisdiction, though Queensland and South Australia opted for succession duties with rates and exemptions applied to amounts received by beneficiaries,<sup>72</sup> and New Zealand's tax depended both on the size of the estate and the degree of consanguinity between the beneficiary and the deceased.<sup>73</sup> In Canada, the constitutional restriction on provincial taxing powers to "Direct Taxation within the Province"<sup>74</sup> meant that provinces limited their death duties to property situated within the province upon the death of the owner, and to property situated outside the province only if the deceased was domiciled in the province and the beneficiary was a resident of or domiciled in the

---

70. On the early history of death duties in the Australian colonies, see JULIE P. SMITH, *TAXING POPULARITY: THE STORY OF TAXATION IN AUSTRALIA* 16-18 (1993). For a history of the estate tax in New Zealand, see L. McKay, *Historical Aspects of the Estate Tax*, 8 N.Z.U.L. REV. 1 (1978). In Australia, New South Wales enacted the first death duty in 1851. Tasmania followed in 1865, Victoria in 1870, South Australia in 1876, Queensland in 1886, and Western Australia in 1895. In New Zealand, a tax on estates was first introduced in 1866. *Id.* at 1.

71. I J. HARVEY PERRY, *TAXES, TARIFFS, & SUBSIDIES: A HISTORY OF CANADIAN FISCAL DEVELOPMENT* 108-09 (1955); see also George E. Carter, *Federal Abandonment of the Estate Tax: The Intergovernmental Fiscal Dimension*, 21 CAN. TAX J. 232, 233 (1973). Ontario was the first Canadian province to introduce a succession duty, which was modeled closely after similar legislation enacted a few years earlier in the States of New York and Pennsylvania. R.A. BAYLY, *SUCCESSION DUTY IN CANADA* 10 (1902). Later that year, succession duties were also introduced in Quebec, New Brunswick, and Nova Scotia. Manitoba enacted a succession duty in 1893, and British Columbia and Prince Edward Island followed the next year. *Id.* Alberta and Saskatchewan introduced similar levies in 1903 under the Northwest Territories Ordinance. *Id.*

72. Peter Saunders, *An Australian Perspective on Wealth Taxation*, in *TAXATION ISSUES OF THE 1980s*, at 398 (John G. Head ed., 1983). In South Australia, legislators favored the latter approach on the grounds that "a man should leave his property to several persons instead of one only . . ." PARL. DEB. 1893, I, 342, quoted in STEPHEN MILLS, *TAXATION IN AUSTRALIA* 140 (1925).

73. McKay, *supra* note 70, at 1. In 1881, the legislature abandoned the succession duty basis of the tax, adopting a pure estate-type tax with an exemption and progressive rates based on the size of the estate. In 1909, however, a succession duty was reintroduced to operate in tandem with the estate tax. *Id.* at 3-4.

74. Constitution Act, 1867, 30 & 31 Vict., c. 3, § 92 (U.K.), s. 92(2).

province.<sup>75</sup> Rates were determined both by the value of the estate and by the relationship between the deceased and the beneficiary.<sup>76</sup>

In each of these jurisdictions, wealth transfer taxes were the first major direct taxes to be imposed, marking a major departure from an earlier era in which governments were financed almost entirely from customs duties and excise taxes.<sup>77</sup> Although the introduction of these taxes reflected an important political shift from regressive indirect taxes to progressive direct taxes,<sup>78</sup> their primary rationale appears to have been to raise revenue.<sup>79</sup> In Australia, revenues from estate duties exceeded 30% of total state tax revenues in 1909 and 1910,<sup>80</sup> and continued to account for a significant share of state tax revenues until the late 1960s.<sup>81</sup> In Canada, provincial succession duties accounted for almost 40% of provincial tax revenues in 1913,<sup>82</sup> and remained substantial contributors to provincial finances until 1946, when most provinces ceded occupancy of this field to the federal government.<sup>83</sup> In New

---

75. Carter, *supra* note 71, at 233. For a summary of the leading constitutional cases that shaped the evolution of provincial succession duties in Canada, see G.V. LAFOREST, CANADIAN TAX PAPER NO. 65, THE ALLOCATION OF TAXING POWER UNDER THE CANADIAN CONSTITUTION 106-09 (2d ed. 1981). For a more detailed analysis of the impact of Canadian constitutional law on the design of these succession duties, see Wolfe D. Goodman, *Provincial Wealth Taxes*, in REPORT OF PROCEEDINGS OF THE TWENTY-THIRD TAX CONFERENCE 29 (1972) (contending that provincial succession duties could have applied to all amounts received by beneficiaries resident or domiciled in the province without violating the constitutional provision limiting provincial taxing powers). That provincial succession duties could also apply to amounts received by resident beneficiaries regardless of the domicile or residence of the deceased, was subsequently established in *Ellet's Estate v. Attorney-General of British Columbia*, [1980] 2 S.C.R. 466, available at 1980 N.R. LEXIS 1408.

76. Carter, *supra* note 71, at 233.

77. SMITH, *supra* note 70, at 16; Philipps, *supra* note 9, at 91.

78. SMITH, *supra* note 70, at 16; Philipps, *supra* note 9, at 93-94 (contending that political agitation for direct taxation was much more muted in Canada than in the United States).

79. PERRY, *supra* note 71, at 109 (referring to Canada); SMITH, *supra* note 70, at 17 (referring to Australia); McKay, *supra* note 70, at 1 (referring to New Zealand).

80. Calculated from figures in R.L. MATHEWS & W.R.C. JAY, FEDERAL FINANCE: INTERGOVERNMENTAL FINANCIAL RELATIONS IN AUSTRALIA SINCE FEDERATION 83 tbl.11 (1972).

81. Although the contribution of estate duties to state tax revenues decreased to 15.1% in 1918-19, 12.0% in 1928-29, and 7.6% in 1938-39, this share increased to 24.1% in 1948-49 (after the states abandoned their income taxes to the Commonwealth Government during the Second World War), and exceeded 18% in 1958-59 and 16% in 1968-69. Calculated from figures in *id.* at 100, 166, 194, 230, 247, tbls.14, 21, 24, 34, 38. For a breakdown among different states in the years after the Second World War, see Saunders, *supra* note 72, at 398-99.

82. Calculated from figures in PERRY, *supra* note 71, at 123 tbl.VII.

83. The contribution of succession duties to provincial tax revenues was almost 30% in 1937 and over 20% in 1946, but declined thereafter to 6.9% in 1949, 4.8% in 1959, and 2.0% in 1969. Calculated from figures in STATISTICS CANADA, HISTORICAL STATISTICS OF CANADA § H tbl.H92-112, available at [http://www.statcan.ca/english/freepub/11-516-XIE/sectionh/H92\\_112.csv](http://www.statcan.ca/english/freepub/11-516-XIE/sectionh/H92_112.csv). While succession duties obviously accounted for a larger share of tax revenues in those provinces that collected their own taxes

Zealand, the estate tax accounted for 13.5% of government revenues in 1915, but declined thereafter.<sup>84</sup>

Revenue considerations were also central to the decision of the Commonwealth Government in Australia to enact a national estate duty in 1914, and the decision of the federal government in Canada to enact a succession duty in 1941. In Australia, estate duty and income tax were enacted in order to help finance participation in the First World War, after revenues from customs and excise duties collapsed due to the disruption of trade.<sup>85</sup> In Canada, where a federal income tax was enacted primarily for revenue reasons during the First World War,<sup>86</sup> the main justification by Minister of Finance J.L. Ilsley for the introduction of a federal succession duty was "the compelling need for revenue" to fight the Second World War.<sup>87</sup> At the same time, he emphasized, since the provinces had "not fully occupied" the field, there was "room for an additional and independent dominion tax" as a permanent source of federal revenue.<sup>88</sup> As a percentage of total tax revenues, however, federal wealth transfer taxes in Australia and Canada were never very large, accounting for only two to four percent of federal tax revenues in Australia from 1914 to 1940 and no more than 1.4% of federal tax revenues in the post-war period,<sup>89</sup> and contributing no more than 1.7% of federal tax revenues in Canada.<sup>90</sup>

---

(Ontario and Quebec until 1963 and British Columbia thereafter), the relative role of these taxes also declined in the postwar period, falling to 9.2% in Ontario and 6.1% in Quebec in 1958-59; and 3.2% in British Columbia, 2.7% in Ontario, and 2.4% in Quebec in 1968-69. Calculated from figures in CAN. TAX FOUND., *PROVINCIAL FINANCES 1969*, at 207, 211, 224 tbls.53, 55, 63 (1969).

84. As a percentage of total government revenue, the estate tax declined to 9.1% in 1925, 8.8% in 1935, 4.6% in 1945, 4.0% in 1955, 2.5% in 1965, and 1.4% in 1975. McKay, *supra* note 70, at 21 tbl.I. By 1985, the share of tax revenues represented by the estate tax fell to 0.2%. O.E.C.D., *supra* note 3.

85. MATHEWS & JAY, *supra* note 80; SMITH, *supra* note 70, at 45. Although the estate duty included gifts made within a year of death, a separate gift tax was not enacted until 1942.

86. On the origins of the federal income tax in Canada, see Richard Krevet, *The Origin of Federal Income Taxation in Canada*, 3 CAN. TAX'N 170 (1981).

87. J.L. Ilsley, Minister of Fin., Budget Speech, Address Before the Canadian House of Commons (Apr. 29, 1941), published by King's Printer, 1941, at 16 (adding that "[d]eath duties, in general, are a very good type of tax, second only to income tax in their essential fairness and the possibilities of adjusting them progressively to ability to pay"). The succession duty was based partly on the share of the estate received by each beneficiary, partly on the size of the estate, and partly on the relationship between the beneficiary and the deceased. In 1958, this tax was replaced by an estate tax with progressive rates based solely on the aggregate value of the estate. A gift tax had been introduced in 1935, primarily to discourage income-splitting under the federal income tax. R.M. BIRD & M.W. BUCOVETSKY, CANADIAN TAX PAPER NO. 58, CANADIAN TAX REFORM AND PRIVATE PHILANTHROPY 35 (1976).

88. Ilsley, *supra* note 87, at 16.

89. Saunders, *supra* note 72, at 398-99.

90. Figures calculated from STATISTICS CANADA, HISTORICAL STATISTICS OF CANADA § H

In Australia, the introduction of the national estate duty led to a lengthy period in which the Commonwealth and State Governments jointly occupied the wealth transfer tax field. Despite recurring proposals to allocate this revenue source solely to the States,<sup>91</sup> or solely to the Commonwealth Government,<sup>92</sup> joint occupancy continued until the taxes were repealed at both levels of government in the 1970s and early 1980s. As a result, although the Commonwealth and State Governments cooperated to some extent in the administration of these taxes,<sup>93</sup> Australia's "double or duplicative" wealth transfer tax system was a source of considerable complexity and high compliance and administration costs.<sup>94</sup>

In Canada, complete joint occupancy lasted only from 1942 to 1946, after which all provinces but Ontario and Quebec agreed to withdraw from the collection of succession duties as well as personal and corporate income taxation in return for unconditional grants from the federal government.<sup>95</sup> In order to relieve the estates of decedents in Ontario and Quebec from the combined burden of federal and provincial taxes, the federal succession duty was amended to provide a credit for provincial succession duties up to 50% of the federal tax otherwise payable.<sup>96</sup> In 1957, the unconditional grant system

tbl.H75-91, available at [http://www.statcan.ca/english/freepub/11-516-XIE/sectionb/H75\\_91.csv](http://www.statcan.ca/english/freepub/11-516-XIE/sectionb/H75_91.csv).

91. At the Premiers' Conference in 1926, for example, the Commonwealth proposed to vacate the estate duty and other revenue sources to the states in exchange for the abolition of per capita grants. The states rejected the proposal for a number of reasons, including the absence of any guarantee that a subsequent Commonwealth Government would not re-enter the field. MATHEWS & JAY, *supra* note 80, at 120. Likewise, in 1974, the Senate Standing Committee on Finance and Government Operations recommended that the Commonwealth Government vacate the field of estate and gift duty, subject to the states agreeing on uniform legislation and rates of duty. Willard H. Pedrick, *Oh, to Die Down Under! Abolition of Death and Gift Duties in Australia*, 35 TAX LAW. 113, 118 (1981).

92. In 1975, for example, the Taxation Review Committee (also known as the Asprey Committee) recommended a single national estate and gift duty administered by the Commonwealth Government, with a portion of revenues shared with the states based on "the domicile of deceased persons and donors within the State and property within the State of deceased persons and donors domiciled outside Australia." TAXATION REVIEW COMM., FULL REPORT JANUARY 31 1975 ¶ 24.74 (1975), available at <http://purl.library.usyd.edu.au/setis/id/p00087>.

93. Saunders, *supra* note 72, at 400.

94. Pedrick, *supra* note 91, at 119; see also TAXATION REVIEW COMM., *supra* note 92, ¶ 24.71 (acknowledging criticism of the death duties then in force "on grounds of the complexity of separate Commonwealth and State taxes and the considerable costs in administration and compliance that result"); Peter Groenewegen, *Options for the Taxation of Wealth*, 2 AUSTRAL. TAX FORUM 305, 315 (1985) (attributing the unpopularity of death duties in Australia in part to "their high compliance costs for taxpayers, the size of which was strongly influenced by the fact that death duties were a major area of Federal-State duplication").

95. Carter, *supra* note 71, at 235.

96. *Id.* at 235-37 (explaining that the credit did not always relieve the combined burden of both taxes).

was replaced by a series of agreements under which most provinces continued to relinquish succession duties to the federal government in exchange for "rental payments" equal to 50% of federal collections of succession duties in each province.<sup>97</sup> In Ontario and Quebec, which refused to "rent" their succession duties to the federal government, the federal tax was reduced in the form of a 50% abatement that replaced the former tax credit.<sup>98</sup> In 1964, British Columbia withdrew from this "tax rental agreement" and began to collect its own succession duty, receiving the same abatement as was available in Ontario and Quebec.<sup>99</sup> The next year, federal rental payments for this revenue source were increased to 75%, with a corresponding increase in the abatement allowed under the federal tax.<sup>100</sup> While British Columbia increased its succession duty to take full advantage of this abatement, Ontario and Quebec left their succession duties unchanged, opting to receive rental payments equal to 25% of federal collections in their provinces.<sup>101</sup> As a result, while federal-provincial agreements simplified the collection of wealth transfer taxes in seven of ten Canadian provinces, the combination of federal and provincial taxes in the remaining three was as complicated and "duplicative" as the system in Australia. More importantly, perhaps, the federal government's agreement to return 75% of federal wealth transfer tax revenues to the province where the tax was collected (or to abate the federal tax by up to 75% where a province collected its own tax) might be expected to significantly weaken its commitment to the tax. As the following sections demonstrate, however, complexity and revenue yield are only two of many reasons why wealth transfer taxes were abolished in Canada, Australia, and New Zealand.

#### *A. The Abolition of Wealth Transfer Taxes in Canada*

The specific events leading to the abolition of wealth transfer taxes in Canada began somewhat innocuously with the appointment of a Royal Commission on Taxation (the Carter Commission) in 1962, unfolded at the federal level between 1967 and 1971 as the federal government responded to

---

97. *Id.* at 236 (adding that these revenues were supplemented by an "equalization feature: the yields from the three 'standard' taxes were to be equalized to raise the per-capita yields in any province up to the per-capita yield in the two provinces having the highest per-capita yields").

98. *Id.* (emphasizing that "[t]he substitution of the abatement for a tax credit, then, amounted to a change merely in form, not in substance").

99. *Id.* at 238.

100. *Id.*

101. *Id.* at 238 n.26.

the Report of the Carter Commission, and continued at the provincial level over the following fourteen years. This section examines each of these phases.

### 1. *The Carter Commission: 1962-1967*

Promised by Progressive-Conservative Prime Minister John Diefenbaker in the opening speech of his 1962 election campaign,<sup>102</sup> an independent commission had long been favored by tax professionals and business leaders as a vehicle to reduce progressive rates, simplify administration and enforcement, and address technical anomalies in the income tax.<sup>103</sup> When the Progressive-Conservative Party formed a minority government after the election, Diefenbaker announced the appointment of a Royal Commission comprising mainly professionals and businesspersons and chaired by Toronto accountant Kenneth Carter.<sup>104</sup> The Carter Commission's terms of reference were extremely broad, involving a review of all aspects of federal taxation including "income, sales and excise taxes and estate duties."<sup>105</sup>

Given its origins and its membership, there was every reason to expect that the Commission would affirm the prevailing "tax orthodoxy" of business and professional commentators that taxes were too high, that indirect sales or value-added taxes should be considered as alternatives to high income taxes, and that wealth transfer taxes were causing Canadian family businesses to be sold to foreigners.<sup>106</sup> Indeed, submissions to the Commission, most of which were from the same business and professional interests which had pushed for its establishment,<sup>107</sup> tended to repeat these views in more technical form.<sup>108</sup>

---

102. Editorial, *The Vital Pledge*, *GLOBE & MAIL* (Toronto), May 7, 1962, at A6.

103. See Les MacDonald, *Why the Carter Commission Had to Be Stopped*, in *THE QUEST FOR TAX REFORM*, *supra* note 24, at 351, 351-53. The main technical issues involved the characterization of isolated transactions as taxable business income or nontaxable capital gains, and "surplus stripping" transactions designed to convert taxable dividends into nontaxable capital gains. *Id.*

104. Of the six members of the Commission, three were "acknowledged authorities in tax circles, with impeccable professional and business connections," one was a lawyer and General Manager of the Nova Scotia Trust Company, another was Treasurer of the National Council of Women and had previously managed the Western Canadian branch of an insurance firm, and the last was Manager of the British Columbia Federation of Agriculture and an Executive Director of the Canadian Federation of Agriculture. MacDonald, *supra* note 103, at 353.

105. Order in Council, P.C. 1962-1334 (Sept. 25, 1962), reprinted in 1 *REPORT OF THE ROYAL COMMISSION ON TAXATION*, at v (1966).

106. MacDonald, *supra* note 103, at 354.

107. According to one commentator, over half of the submissions to the Commission came from business organizations while less than five percent were from labor and employee organizations. Robert Gardner, *Tax Reform and Class Interests: The Fate of Progressive Reform, 1967-72*, 3 *CAN. TAX 'N 245*,

According to the Shoe Manufacturers' Association of Canada, for example, "[t]he unreasonably high level of succession duties has been the largest single factor both in encouraging the sell-out of Canadian enterprises to foreign interests and in eliminating from the economic scene continuing independent family businesses."<sup>109</sup> The Canadian Bar Association decried the "excessive amount of property" that was tied up for long periods of time in trusts to avoid wealth transfer taxes, concluding that these arrangements "frequently restrict the company's proper development and expansion and may add to production costs."<sup>110</sup> On the basis of these and other submissions, Canada's leading financial newspaper concluded that "the economic damage" caused by these taxes was "staggering."<sup>111</sup>

As well as accepting submissions, the Commission embarked on an ambitious research program, lasting four years and costing approximately CA\$4,000,000.<sup>112</sup> Among 27 research studies, one found no evidence that the estate tax was a major factor in the sale of small businesses.<sup>113</sup> Others challenged the nontaxation of capital gains, which were traditionally excluded from the source concept of income that Canada had borrowed from the United Kingdom.<sup>114</sup> Another study examined the incidence of taxation in Canada, concluding that the tax system as a whole was regressive for at least the poorest third of Canadian families and possibly more.<sup>115</sup> After much delay, and two intervening elections resulting in Liberal minority governments, the Commission's six-volume Report was finally released in February 1967.

Of the Commission's many recommendations, the most central was its conclusion that "taxes should be allocated according to the changes in the economic power of individuals and families."<sup>116</sup> Emphasizing that "[t]he first

## 2. Federal Reform: 1967-1971

While the Commission's Report was hailed by leading tax academics as "a landmark in the annals of taxation,"<sup>128</sup> affluent individuals and the business and professional interests that pushed for the Commission's formation were overwhelmingly negative.<sup>129</sup> Although a reduction in the top marginal rate and repeal of wealth transfer taxes would provide some benefit for affluent individuals, this would be more than offset by the full taxation of capital gains and the inclusion of gifts and inheritances in income. While the Report estimated that 64% of Canadian taxpayers would pay lower taxes under its proposals, these reductions averaged only about five percent of taxes otherwise payable and were generally limited to taxpayers with incomes of less than CA\$35,000 in 1964.<sup>130</sup> In contrast, 27,000 taxpayers with incomes over CA\$35,000 could have expected to pay an additional CA\$1,000 on average, while an estimated 633 individuals with incomes over CA\$300,000 could have expected to pay an average of more than CA\$67,000 in additional taxes.<sup>131</sup> The mining industry stood to lose the most, as the Report's proposed withdrawal of net depletion allowance and a three-year tax holiday were expected to increase its taxes by more than 100%—most of which would have been paid by the fifteen largest companies.<sup>132</sup> Not surprisingly, therefore, mining companies led organized opposition to the Report, threatening the cessation of Canadian investments, and enlisting the support of premiers from Western provinces where the extraction industries predominated.<sup>133</sup>

At the end of April 1967, then Finance Minister Mitchell Sharp announced a timetable to deal with the Report, inviting comments on the major recommendations by September of that year, and promising a White Paper incorporating the Government's proposals thereafter and draft legislation to be enacted by the end of 1968.<sup>134</sup> Within two weeks, however, Sharp responded to pressure from the mining industry by guaranteeing that the

three-year tax exemption for new mines would remain until the end of 1973, whatever decisions were made on the basis of the Report of the Royal Commission.<sup>135</sup> By autumn 1967, Sharp had received over a thousand responses, including 150 substantial submissions, mostly from corporations and business and professional organizations, and mostly critical.<sup>136</sup> While many of these submissions opposed the withdrawal of special tax preferences,<sup>137</sup> considerable criticism was also directed at the Commission's emphasis on fairness as "the first and most essential purpose of taxation" and at the comprehensive tax base in particular. Imperial Oil, for example, opposed the "sacrifice of economic growth to the commission's concept of equity."<sup>138</sup> The Trust Companies Association warned that the inclusion of gifts and inheritances in the income tax base "would remove a major incentive for Canadians to work and produce for the benefit of their families" resulting in a "very large annual disappearance of private capital."<sup>139</sup>

The Government's first official response to the Report came on November 30, 1967, when the Minister of Finance tabled the federal budget. Identifying as common concerns in the submissions that he had received both the uncertain impact of such far-reaching reforms and the need to attract foreign capital, Sharp announced that whatever proposals the Government would "place before parliament and the public in the form of a White Paper and ultimately in draft legislation" would "undoubtedly be influenced" by the Report of the Commission, but "will be more in the nature of reforms to the existing tax structure rather than the adoption of a radically different approach."<sup>140</sup> In other words, the Government would adopt a more piecemeal approach to tax reform, rather than the comprehensive framework adopted by the Commission. Before any more specific proposals could be formulated, however, the Government was thrown into turmoil when then Prime Minister

Lester Pearson announced his intention to resign in December 1967 and a leadership race and federal election intervened.<sup>141</sup>

With a new Liberal Government under Prime Minister Pierre Trudeau, the promised White Paper was predictably delayed. In April 1968, the new Finance Minister Edgar Benson announced a change in the Government's tax reform schedule, explaining that major reforms would not be presented until some time in 1969.<sup>142</sup> In the interim, however, the Government signaled its rejection of the Commission's comprehensive tax base by introducing major revisions to the federal gift and estate taxes in the October 1968 federal budget: exempting inter-spousal transfers, integrating these taxes in the form of a cumulative progressive tax, and increasing rates on estates valued at less than CA\$5,000,000.<sup>143</sup> Defending the continued existence of a separate gift and estate tax, the Finance Minister explained that he respected "the intellectual coherence and elegance" of the Commission's recommendation, but that "the overwhelming weight of Canadian opinion is against it now, and many Canadian practices and institutions would be seriously disrupted if we embraced this proposal."<sup>144</sup>

Not surprisingly, given the increased impact on small and medium-sized estates, the amendments to the gift and estate tax generated considerable political opposition, particularly from owners of small businesses and family farms who had played a relatively minor role in opposition to the Royal Commission Report.<sup>145</sup> In Western Canada, where farming interests were particularly strong, the Provincial Governments of Alberta and Saskatchewan responded to this sector by refunding the provincial share of the federal estate

---

141. As a contender in the race for leadership of the Liberal Party, Sharp insisted that he was in no position to take a public stance on tax reform. Hartle, *supra* note 24, at 412. Before the leadership campaign came to an end, however, Sharp withdrew in favor of Pierre Trudeau, who became Liberal leader and Prime Minister on April 6, 1968. Under Trudeau, the Liberals called a federal election for June 25, 1968, which they won handily and formed a majority government.

Bird, *Canada's Vanishing Death Taxes*, 16 OSGOODE HALL L.J. 133, 137 (1978) (observing that the amendments to the federal gift and estate taxes "gave rise to considerable public outcry, to the point where it appears the whole experience may have made the government particularly cautious in this area when designing its major tax reform over the next few years").

tax to estates from which it had been collected.<sup>146</sup> In these two provinces, therefore, estate taxes were effectively reduced by 75%.

In this context, the long-awaited White Paper was finally released on November 7, 1969.<sup>147</sup> Although explicitly rejecting the Carter Commission's comprehensive tax base,<sup>148</sup> as well as several other proposals such as family taxation<sup>149</sup> and the elimination of all resource tax incentives,<sup>150</sup> the White Paper agreed with the Commission Report that, as a general rule, capital gains should be fully taxable at ordinary rates.<sup>151</sup> In order to prevent the concurrent application of capital gains tax and estate tax "at a most inconvenient time," however, the White Paper rejected the Commission's proposal that capital gains should be recognized when property is transferred at death, recommending instead that "the person who inherits the assets be treated as if he had purchased them at their cost to the deceased" plus "part of the death taxes paid on the assets in question—the part that relates to the capital gain."<sup>152</sup> In the case of gifts, though, the White Paper recommended that capital gains be taxable in the year of the gift and that the person receiving the property be treated "as if he had purchased the asset for its fair market value."<sup>153</sup> Finally, and unexpectedly, the White Paper recommended that shareholders in widely-held Canadian corporations should be required to recognize accrued gains and losses every five years—though only half of these gains and losses would be recognized for tax purposes.<sup>154</sup>

---

146. CAN. TAX FOUND., *supra* note 83, at 58. In Alberta, this legislation came into effect on March 30, 1967. In Saskatchewan, refunds commenced on April 1, 1969. In its 1969 budget, the Government of Manitoba announced that it would also introduce legislation to refund the provincial share of the federal estate tax unless the federal government resolved the "competition for economic advantage" satisfactorily. Millie Goodman, *Checklist*, 17 CAN. TAX J. 155, 161-62 (1969) (on file with author). The legislation, however, died on the Order Paper when a provincial election was called and was not reintroduced by the social democratic New Democratic Party that came to power.

148. BENSON, *supra* note 147, ¶ 3.3 (stating that "[t]he government rejects the proposition that every increase in economic power, no matter what its source, should be treated the same for tax purposes").

149. *Id.* ¶ 2.5 (noting that the Commission's proposed family unit would create a "tax on marriage").

150. *Id.* ¶ 5.24 (concluding that "special rules are still needed for the mineral industry").

151. *Id.* ¶¶ 3.13-18. The White paper proposed that to avoid harsh treatment under the ordinary rates, special rules be enacted to exempt gains on the sale of principal residences, and proposed to tax only half the gains of widely-held Canadian companies. *Id.* ¶¶ 3.33-35. In order to prevent retroactive application of the tax, the White Paper also proposed that tax should only apply to gains accruing after a stipulated "valuation day." *Id.* ¶ 3.16.

152. *Id.* ¶ 3.42.

153. *Id.* ¶ 3.41.

154. *Id.* ¶ 3.33. This approach had been considered in the Commission's Report, but was not specifically recommended. 3 REPORT OF THE ROYAL COMMISSION ON TAXATION, *supra* note 116, at 344,

In the White Paper itself, the Minister of Finance welcomed "public discussion of the proposals . . . before Parliament is asked to approve a bill to implement tax reform."<sup>155</sup> For this purpose, the Government's preferred vehicle was the parliamentary hearings on the White Paper conducted by the House of Commons Standing Committee on Finance, Trade, and Economic Affairs and the Standing Senate Committee on Banking, Trade, and Commerce. Unlike congressional committees in the United States, these committees had limited staff and minimal technical knowledge and were completely unprepared for the difficult task of reviewing and commenting upon detailed tax proposals.<sup>156</sup> The Commons committee alone received 524 briefs and 1,093 letters, and heard 211 oral presentations from 820 individuals.<sup>157</sup>

The vast majority of these submissions were from corporations and business associations,<sup>158</sup> most of which were highly critical of the proposals to tax capital gains at ordinary rates and to tax accrued gains on widely-held shares every five years.<sup>159</sup> Many organizations also objected to the taxation of capital gains as well as gifts and estates, notwithstanding the White Paper's proposal to defer the recognition of gains on bequests until the property is ultimately sold.<sup>160</sup> The Ontario Government released a set of counter-proposals in June 1970, recommending significantly lower capital gains tax rates, taxation of accrued gains at death, and a simultaneous and substantial reduction in wealth transfer taxes.<sup>161</sup> Small business owners organized a broader campaign of public advertisements, letters, speaking tours, and rallies under the banner of the Canadian Council for Fair Taxation, established in December 1969.<sup>162</sup> According to the group's founder and President, John Bulloch, the combination of capital gains tax and the estate tax amounted to "an attack on the middle-class values of hard work, thrift and initiative" and a "confiscation of the money and resources of the huge middle segment of the

population."<sup>163</sup> At the height of the campaign, the Government was reported to be receiving protest letters at a rate of 7,000 each day.<sup>164</sup>

When the parliamentary committees reported in the fall of 1970, it was not surprising, as one commentator observed, that they would "reflect in varying degrees the overwhelmingly hostile reaction of representatives of the business and professional organisations from whom the bulk of the brief and other submissions were received."<sup>165</sup> According to the Commons committee, the one-half inclusion rate for shares of widely-held corporations should be extended to all capital assets,<sup>166</sup> the five-year realization rule for these shares should be abandoned,<sup>167</sup> and the proposal to tax accrued gains at death should be restored in order to prevent indefinite deferral.<sup>168</sup> Since the last of these recommendations would, the committee noted, "magnif[y] the problem, brought to the committee's attention innumerable times, of the concurrent impact of the two taxes at the same time, at death," a further recommendation proposed a reduction of the federal estate tax "across the board, either by reducing the rates or by expanding the brackets."<sup>169</sup> The Senate committee went further, recommending a distinction between short-term and long-term gains and a rate of tax on the latter limited to the lesser of 25% or half the marginal income tax rate of the taxpayer,<sup>170</sup> and the postponement of tax on transfers of property by gift as well as at death, with a carryover of the donor's cost to the recipient.<sup>171</sup> In addition, the committee suggested, the Government "might well consider abandoning the estate tax field to the provinces."<sup>172</sup>

The Government, which had given itself room to maneuver by presenting its response to the Commission Report in the form of a White Paper rather than a budget,<sup>173</sup> substantially revised its proposals in light of the

173. Bucovetsky & Bird, *supra* note 129, at 21 (explaining that the defeat of a budget constitutes a "want of confidence" requiring the government's resignation, while a White Paper constitutes "an

parliamentary committee reports and the organized opposition, releasing its final tax reform package in the form of draft legislation accompanying the federal budget on June 18, 1971.<sup>174</sup> Following the recommendations of the Commons committee, the draft legislation adopted a one-half inclusion rate for all capital gains and losses accruing after a designated valuation day,<sup>175</sup> dropped the White Paper proposal to tax accrued gains on widely-traded shares every five years,<sup>176</sup> and accepted the Carter Commission's original proposal to tax accrued gains when property is transferred on death as well as by gift.<sup>177</sup> Following the recommendation of the Senate committee, the Government decided to abandon the estate and gift tax field to the provinces.<sup>178</sup>

The reasons for the Government's decision were expressed in four short paragraphs in its *Summary of 1971 Tax Reform Legislation*. First, it explained, the combination of capital gains tax and estate tax at death "could in some instances result in substantial tax impact arising on the death of a taxpayer."<sup>179</sup> Second, it continued, "[a] reduction in federal estate taxes to the extent suggested by the Commons committee would result in a revenue loss of about half the CA\$55 million now received by the federal government from this source" after payment of the provincial share to provincial governments.<sup>180</sup> Third, it emphasized, "[t]wo provinces now return their entire share of estate taxes to estates and it is no longer possible to establish a uniform national system of death duties through federal legislation."<sup>181</sup> As a result, it concluded, "[i]n these circumstances, it has been decided that the federal government will vacate the estate and gift tax field on December 31, 1971."<sup>182</sup> Thus, it would seem, the introduction of capital gains tax at death, the low revenue yield for the federal government, and the disparate effects of federal and provincial joint occupancy of the field led to the repeal of the federal gift and estate tax. Unstated, of course, was the organized opposition

---

expression of the thrust of government thinking that nonetheless provides freedom for alteration or strategic retreat").

to capital gains and wealth transfer taxes reflected in public campaigns and submissions to the parliamentary committees.

By sacrificing the federal gift and estate tax, the Government finally obtained the acquiescence of organized interest groups to the introduction of capital gains tax and the recognition of accrued gains at death. In a letter to the editor of the *Toronto Daily Star*, Canadian Council for Fair Taxation President John Bulloch praised the "highly nationalistic" tax legislation for abolishing wealth transfer taxes "that would, in combination with capital gains taxes, have forced the sale of family businesses, frequently to foreign interests."<sup>183</sup> The construction industry and the Canadian Real Estate Association welcomed the repeal of the federal gift and estate tax because "the small builder is still the backbone of the residential construction industry."<sup>184</sup> The business press was generally favorable, characterizing the tax reform legislation as "a far superior tax plan" to the White Paper.<sup>185</sup> Aside from a critical editorial in the *Toronto Daily Star*,<sup>186</sup> and unfavorable commentary from a few Canadian tax academics,<sup>187</sup> the predominant public response to the repeal of the federal gift and estate tax was silence.<sup>188</sup>

185. L.H. Asper, *Benson Iceberg Becomes Benson Compromise and a Political Timebomb is Defused*, *GLOBE & MAIL* (Toronto), June 19, 1971, at B3.

186. Editorial, *Santa to the Rich*, *TORONTO DAILY STAR*, June 30, 1971, at 6 (arguing that the abolition of federal wealth transfer taxes "clearly violates a principle to which society should give some deference: equality of opportunity. And it overlooks without justification a perfectly good source of government revenue."). The editorial proceeded to describe the repeal of the federal gift and estate tax as "but one example of Mr. Benson's depressingly long march from Carter's central concern with tax equity," adding, "[t]he people who would have directly benefited from its implementation were not heard in Ottawa: their small voices, ignorant and poor, were submerged in the flood of glossy briefs that poured into the capital from all the vested interests." *Id.*

187. See, e.g., Gordon Bale, Letter to the Editor, *Benson Tax Bill Called Anemic*, *GLOBE & MAIL* (Toronto), June 25, 1971, at A7 (describing repeal of the federal gift and estate tax as "tax regression rather than tax reform"); see also Richard M. Bird, *The Case for Taxing Personal Wealth*, in *REPORT OF PROCEEDINGS OF THE TWENTY-THIRD TAX CONFERENCE*, *supra* note 75, at 24 (defending wealth transfer taxes on "moral, social and economic grounds" and emphasizing the need for "a reaffirmation of the national interest in taxing wealth"); John Bossons, *Economic Overview of the Tax Reform Legislation*, in *REPORT OF PROCEEDINGS OF THE TWENTY-THIRD TAX CONFERENCE*, *supra* note 75, at 54 (concluding that the repeal of the federal estate tax "would provide a substantial windfall for a relatively small number of present wealth holders" equivalent to "a lump-sum transfer of approximately \$4.5 billion to individuals who currently own wealth that would be taxed in future years under the estate tax").

188. Bird, *supra* note 145, at 133.

In Parliament, where the Liberal Party held a comfortable majority, enactment of the draft legislation was never in doubt. While the Progressive-Conservative Leader of the Opposition criticized the Government for the inconsistency of amending the gift and estate tax in 1968 and repealing it three years later,<sup>189</sup> he and the members of his parliamentary caucus generally supported the decision to repeal the federal gift and estate tax. In fact, several complained that since provincial governments might continue to levy succession duties, the taxation of capital gains at death could create "extreme hardship"—particularly for family farms.<sup>190</sup> Only members of the social democratic New Democratic Party opposed abolition of the tax, criticizing the Government for abandoning the Prime Minister's campaign promise of a "Just Society" by ignoring equality of opportunity and tax progressivity.<sup>191</sup> After

189. *See, e.g., House of Commons Debates* (June 23, 1971) at 7307 (Hon. Robert Stanfield) (arguing that "the minister put the country through a lot of turmoil and trouble by an increase in estate taxes in an attempt to reduce the tax on very small estates. Now, with great fanfare the minister announces its abolition, also for the very best of reasons."); *id.* (Dec. 17, 1971) at 10,572 (Hon. Robert Stanfield) (contending that after the reform of the estate tax in 1968, the minister of finance was "doing away with all of what he put before the House two years previously and all that he had fought for in the House").

190. *Id.* (Nov. 8, 1971) at 9447 (Hon. Gordon Ritchie) (suggesting that the federal capital gains tax in combination with provincial estate taxes "will create extreme hardship in agriculture and in the farm units as we know them today"); *see also id.* (June 22, 1971) at 7226 (Hon. Marcel J.A. Lambert) (arguing that with the introduction of a federal capital gains tax, "[t]he people for whom this means another tax on top of other taxes are the farmers and ranchers, particularly those who live in provinces where the removal of the estate tax is meaningless"); *id.* (Nov. 8, 1971) at 9416 (Hon. Cliff Downey) (suggesting that despite the abolition of the federal estate tax, "really there will be no respite for many people in this country in respect of estate taxes, simply because there has not been sufficient consultation with the provinces"); *id.* (Nov. 9, 1971) at 9483 (Hon. Gordon Ritchie) (arguing that "I really do not see how you can have an estate tax as well as a capital gains tax applied to the farming industry. You can have one or the other, but I doubt that you can have both. If you have both the result will be a tax jungle because a number of provinces have indicated they are going to retain and even increase estate taxes."); *id.* (Nov. 15, 1971) at 9568 (Hon. Wallace Bickford Nesbitt) (suggesting that following the repeal of the federal estate tax, "[u]ndoubtedly some of the provinces will move into the estate tax field, as a result of which Canadians in certain parts of Canada will, in effect, be taxed doubly as compared with Canadians in other places"); *id.* (Nov. 15, 1971) at 9589 (Hon. Marcel J.A. Lambert) (suggesting that federal and provincial estate taxes have contributed to foreign ownership of Canadian businesses, and that they are "the reason family businesses have been sold to strangers, whether they are from the United States or elsewhere").

191. *See, e.g., id.* (Sept. 14, 1971) at 7803 (Hon. J. Edward Broadbent) (arguing that the abolition of the estate tax is detrimental to the principle of equality of opportunity, and that the Liberal party "which governs this country is the one which talks about equality of opportunity. This is the same party that is abolishing estate taxes. So much for justice in that area."); *id.* (Sept. 15, 1971) at 7841 (Hon. David Orlikow) (describing gift and estate taxes as "one of the basic features of every progressive tax system"); *id.* (Sept. 17, 1971) at 7955 (Hon. John Gilbert) (suggesting that the abolition of federal wealth transfer taxes "will further stratify the Canadian people into an economic caste system"); *id.* (Dec. 10, 1971) at 10,369 (Hon. John Burton) (arguing that "it is absolutely essential, if we are to have any sort of just society at all, to tax inherited wealth").

minor technical amendments, the draft legislation was passed on December 17, 1971, and came into effect on January 1, 1972.

### 3. *Provincial Aftermath: 1971-1985*

At the provincial level, the federal government's decision to repeal the federal gift and estate tax was generally opposed.<sup>192</sup> Although the Province of Quebec had long favored exclusive provincial jurisdiction of these taxes<sup>193</sup> and welcomed federal abandonment of the field,<sup>194</sup> most other provinces objected to the loss of revenue from federal rental payments and worried about the prospect of tax competition among provinces opting to collect their own succession duties.<sup>195</sup> Smaller provinces in particular complained about the lack of prior consultation and the absence of adequate notice to establish their own gift and succession duties, as well as the administration and collection costs that this would entail,<sup>196</sup> requesting the federal government to maintain the existing system of estate and gift taxation for at least a year from January 1, 1972, to give them time to address the implications of the federal proposal.<sup>197</sup> Although it refused to accede to this request, the federal government nonetheless offered to administer and collect provincially-imposed succession duties and gift taxes for a period of three years, provided that (1) the agreements were entered into by at least four provinces, (2) each participating province would agree to a model act under which the base of the tax would be the same for all provinces, (3) "some degree of uniformity of rates would be provided under the model Acts having regard to the rates now in effect in those provinces imposing their own succession duties," and (4) "it

197. CAN. TAX FOUND., THE NATIONAL FINANCES 1971-72, at 49 (1972).

would be clear that the federal government's role is purely administrative and that the presentation to the public would make it clear that it is a provincial, not a federal tax."<sup>198</sup>

In Alberta, where the provincial share of the federal estate tax had been refunded since 1967, the Provincial Government made it clear that it had no intention to enter into any such agreement and would not introduce its own wealth transfer tax.<sup>199</sup> In Manitoba and Saskatchewan, however, where the New Democratic Party (N.D.P.) had won provincial elections in 1969 and 1971, as well as the four Atlantic Provinces, Provincial Governments accepted the federal government's offer and introduced largely uniform succession duties and gift taxes.<sup>200</sup> In order to protect their succession duties, British Columbia and Ontario entered into agreements with the federal government for the collection of gift tax, and Quebec enacted its own gift tax which it collected as of January 1, 1972.<sup>201</sup> At the beginning of 1972, therefore, the federal government was collecting the uniform succession duty for six provinces and gift tax for eight provinces, the Governments of British Columbia, Ontario, and Quebec were collecting their own succession duties, Quebec was collecting its own gift tax, and Alberta levied no wealth transfer taxes. Not surprisingly, this situation did not last very long.

Of the six provinces accepting the federal government's offer to administer and collect provincial succession duties, Prince Edward Island was the first to repeal its succession duty legislation, which it did before any tax was even collected.<sup>202</sup> Estimating that total collections from the new tax over

202. *BIRD & BUCOVETSKY*, *supra* note 87, at 40.

three years would amount to only CA\$240,000,<sup>203</sup> the Provincial Government apparently concluded that the anticipated revenue was simply not worth the effort. In his budget speech in 1973, the Province's Minister of Finance proudly declared that "Alberta and Prince Edward Island are presently the only two provinces without some form of death duties."<sup>204</sup> Fearing the loss of investment to this "tax haven," the Government of Nova Scotia announced on February 23, 1973 that its succession duty and gift tax would expire by March 31, 1974.<sup>205</sup> A month later, New Brunswick's Minister of Finance blamed "tax policies in other provinces" when he announced the repeal of his province's succession duty and gift tax effective December 31, 1973.<sup>206</sup> Newfoundland concluded the abolition of wealth transfer taxes in Atlantic Canada by repealing its succession duty and gift tax effective April 9, 1974.<sup>207</sup>

In Western Canada, where Alberta became Canada's first "death tax haven" when it refused to enact a succession duty or gift tax in 1972,<sup>208</sup> provincial wealth transfer taxes lasted only a few more years. Although the Premier of British Columbia promised in June 1972 to repeal his province's succession duty and gift tax by April 1, 1973,<sup>209</sup> the election of a N.D.P. Government the next month put this policy on hold.<sup>210</sup> When the collection agreements with the federal government expired at the end of 1974, British Columbia assumed the administration of its own gift tax, and N.D.P. Governments in Manitoba and Saskatchewan began collecting their own

210. See *Debates of the Legislative Assembly* (B.C.) (Oct. 24, 1972) at 235-36 (Hon. D. Barrett), available at [http://www.legis.gov.bc.ca/hansard/30th1st/30p\\_01s\\_721024z.htm](http://www.legis.gov.bc.ca/hansard/30th1st/30p_01s_721024z.htm) (Premier David Barrett defended the continuance of the provincial succession duty as follows: "If one rich man leaves because of this law or because of succession duty then I say let him go. And good riddance! We'd be far better off without him rather than having someone living around here who's trying to escape their social and financial responsibility to the people of British Columbia. . . . We say the rich are welcome, the capital we want it to stay, but it must pay its fair share.").

succession duties and gift taxes.<sup>211</sup> The election of the conservative Social Credit Party in British Columbia at the end of 1975, however, marked the beginning of the end of wealth transfer taxes in Western Canada. In his 1977 budget speech, British Columbia's Minister of Finance announced that the provincial succession duty and gift tax would be abolished in order to prevent the "forced" sale of family farms and businesses to "outsiders" and "to encourage the retention and accumulation of capital by residents of British Columbia."<sup>212</sup> Later that year, the N.D.P. Government in Saskatchewan announced that it would repeal the provincial succession duty and gift tax, notwithstanding the Government's conviction that "a tax on wealth is a fair tax"—attributing this decision to the abolition of these taxes in other provinces and "a widespread opinion that the successors of the average citizen will be subject to the tax" even though it applied to less than three percent of estates in Saskatchewan.<sup>213</sup> Although the N.D.P. Government in Manitoba maintained its commitment to provincial wealth transfer taxes in its 1977 budget,<sup>214</sup> a Conservative Government was elected later that year and repealed these taxes in early 1978.<sup>215</sup>

By 1978, therefore, Ontario and Quebec were the only Canadian jurisdictions that continued to collect succession duties and gift taxes.<sup>216</sup> In each of these provinces, however, the Provincial Government had adopted a policy of gradually reducing these taxes over time as revenues from the taxation of post-1971 capital gains increased—regarding these taxes as temporary measures to maintain revenues until "the capital gains tax matures."<sup>217</sup> In Ontario, where succession duty rates were originally increased

succession duty would be retained but substantially amended, with rates based solely on amounts received by each beneficiary, the total exemption of bequests between spouses, and further exemptions for transfers to children and other dependents.<sup>226</sup> The legislation, which was introduced in Quebec's National Assembly in June 1978, was enacted on December 22, 1978 and came into effect immediately.<sup>227</sup> Over the next several years, the tax raised up to about CA\$45,000,000 per year,<sup>228</sup> but the Government faced continuing pressure to abolish provincial wealth transfer taxes "because such duties do not exist elsewhere in Canada."<sup>229</sup> With a new Minister of Finance and a provincial election on the horizon (which it lost), the P.Q. Government repealed Quebec's succession duty and gift tax on April 23, 1985.<sup>230</sup>

### *B. The Abolition of Wealth Transfer Taxes in Australia*

Unlike Canada, where the events leading to the repeal of federal and provincial wealth transfer taxes began with the appointment of a Royal Commission, the abolition of wealth transfer taxes in Australia originated in a popular protest movement initiated by a skilled carpenter and building contractor from Western Australia named Sydney Negus.<sup>231</sup> In 1970, after

---

them" and adding that "governments have not adopted this theory, but have used the partial capital gains tax as a reason for removing succession duties").

226. Jacques Parizeau, Minister of Fin., Ministre des Finances, Ministre du Revenu, and Président du Conseil du Trésor, 1978-79 Budget Speech Before the Quebec National Assembly (Apr. 18, 1978), published by Gov't of Que., 1978, at 51.

227. Succession Duty Act, S.Q. 1978, ch. 37 (1978). For a detailed review of the revised legislation, see Robert Raich, *An Overview of the New Quebec Succession Duty Act*, in REPORT OF PROCEEDINGS OF THE THIRTIETH TAX CONFERENCE 725 (1980) (on file with author). Among the many revisions to the provincial succession duty, one of the most important was replacement of a "transmissions basis," whereby the tax applied to property situated outside the province only if the deceased was domiciled in the province and the beneficiary was a resident of or domiciled in the province, with an "accessions basis," according to which the tax would apply to all property situated outside the province received by a person resident or domiciled in Quebec on the death of another person. Although the constitutionality of this approach was called into question by the British Columbia Court of Appeal in *Canada Trust Co. v. Attorney-General of British Columbia*, [1979] 94 D.L.R. (3d) 90, available at 1978 D.L.R. LEXIS 4237 (ruling on a provision of the British Columbia succession duty enacted in 1972), it was accepted on appeal to the Supreme Court of Canada in *Ellett's Estate v. Attorney-General of British Columbia*, [1980] 2 S.C.R. 466, available at 1980 N.R. LEXIS 1408.

229. JACQUES PARIZEAU, MINISTER OF FIN., 1983-84 QUEBEC BUDGET 24 (1983).

230. YVES L. DUHAIME, MINISTER OF FIN., 1985-86 QUEBEC BUDGET 17 (1985) (stating erroneously that "Québec has . . . been the only province to collect succession duties" since capital gains became partially taxable in 1972).

231. See Pedrick, *supra* note 91, at 114.

learning that estate duty could have a substantial impact on relatively modest amounts left to his wife, Negus launched a successful petition campaign calling for the abolition of estate duties, ran for public office, and was elected to the Federal Senate.<sup>232</sup> As Willard Pedrick observed, "the election of an Independent, whose only campaign issue had been abolition of death duties, was not lost on professional party leaders."<sup>233</sup> Little more than a decade later, Australian wealth transfer taxes had completely disappeared.

Three factors appear to have contributed to the strength of Australia's estate duty abolition movement in the early 1970s, particularly among farmers and small business owners.<sup>234</sup> First and foremost, exemptions had not been increased to account for inflation, causing commonwealth and state taxes to apply to relatively modest estates.<sup>235</sup> At the federal level, for example, the commonwealth estate duty at the time contained an exemption of only AU\$20,000 for estates passing to a spouse, child, or grandchild, and AU\$10,000 for all other estates.<sup>236</sup> As a result, as the Taxation Review Committee (Asprey Committee) reported, over 55% of taxable estates in 1972-73 were valued at less than AU\$40,000 and almost 83% were valued at less than AU\$80,000.<sup>237</sup> At the state level, exemptions were generally lower, resulting in a larger number of taxable estates.<sup>238</sup> Farming interests consistently complained that farms had to be sold to pay the duties, though evidence to this effect was "sparse and mostly anecdotal."<sup>239</sup> Not surprisingly, therefore, it was political leaders with a rural political base who pushed the abolition agenda.<sup>240</sup>

In addition to the failure to adjust estate duty exemptions for inflation, a second factor contributing to the unpopularity of these taxes was the failure

to integrate the commonwealth and state duties.<sup>241</sup> While the existence of this "double or duplicative" system of wealth transfer taxes increased compliance costs for all taxable estates,<sup>242</sup> the relative burden was likely higher for small and medium-sized estates.<sup>243</sup> In addition, a study for the Asprey Committee concluded that the costs to comply with the commonwealth and state taxes were larger for estates with small businesses than for most other estates.<sup>244</sup> Despite several recommendations to allocate this revenue source either solely to the states or solely to the Commonwealth Government, however, joint occupancy remained until the taxes were finally repealed.<sup>245</sup>

A final explanation for the strength of Australia's estate duty abolition movement relates to the relative ease with which these taxes could be avoided.<sup>246</sup> Discretionary trusts, for example, could be used to transfer wealth from generation to generation without any tax.<sup>247</sup> At the federal level, gift tax was not integrated with estate duty, and gifts themselves were aggregated only over an eighteen-month period.<sup>248</sup> Because of these and other deficiencies,<sup>249</sup> the tax was generally considered to be easily avoided by the most affluent and sophisticated taxpayers,<sup>250</sup> shifting the primary burden to small and medium-sized estates.<sup>251</sup> As a result, as one commentator explained, "[t]he extent of tax avoidance . . . created public cynicism about the taxes."<sup>252</sup>

At the same time as the unpopularity of these taxes increased, their importance to Commonwealth and State revenues declined. In 1973, the Commonwealth Government collected roughly AU\$75,000,000 from its gift and estate duties, representing only 0.7% of total tax revenues—a lower percentage than at any time in their history.<sup>253</sup> While the states collected

252. *Id.* at 79.

253. Saunders, *supra* note 72, at 399 *tbl.1*. Income taxes, on the other hand, accounted for almost 70% of total tax revenues in 1973. Calculated from figures in O.E.C.D., *supra* note 3.

approximately AU\$185,000,000 from their wealth transfer taxes in 1973,<sup>254</sup> accounting for almost nine percent of total tax revenues,<sup>255</sup> this percentage had declined substantially from only a few years earlier due to the transfer of the payroll tax field from the Commonwealth to the State Governments in 1971,<sup>256</sup> and was lower than at any time since the end of the Second World War.<sup>257</sup> As inflation caused more and more small estates to become taxable, moreover, net revenues suffered because administrative costs were incurred to obtain relatively small amounts of revenue from these estates.<sup>258</sup> In 1972-73, for example, the smallest 55.7% of estates subject to commonwealth estate duty accounted for only 3.9% of revenue collected.<sup>259</sup> Joint occupancy by the Commonwealth and State Governments also contributed to high administrative costs as both levels of government as well as all State Governments were required to maintain the organizational apparatus to enforce and collect the taxes.

The abolition movement's first legislative victory was in Queensland, a "hotbed of agrarian resentment against death duties," where the Brisbane *Courier Mail* had run a series of articles highlighting the hardships caused by death duties and the growing campaign for abolition.<sup>260</sup> After exempting inter-spousal transfers from estate and gift duties in 1975,<sup>261</sup> the conservative Liberal-Country Party coalition government embraced complete abolition in 1976 and repealed the taxes effective January 1, 1977.<sup>262</sup> Although the coalition's Liberal Party Treasurer Sir Gordon Chalk expressed misgivings about the budgetary implications of abolition, which would reduce state revenues by AU\$25,000,000 to AU\$30,000,000 per year,<sup>263</sup> Country Party Premier Joh Bjelke-Peterson apparently concluded that the loss in revenues would be more than offset by internal migrants attracted by the combination of a warm climate and tax-free bequests.<sup>264</sup> Indeed, before the repeal had even

263. Pedrick, *supra* note 91 at 115. For the fiscal year 1975-76, Queensland collected almost AU\$27,000,000 from succession and probate duties. *Id.* at 115 n.6.

264. *Id.* at 115 n.10. Since 1980, in fact, over half a million Australians from other states have

come into effect, the Gold Coast Visitor's Bureau prepared a pamphlet entitled "Legal Information on the Abolition of Death Duties in Queensland," reporting the duty payable in other States on an estate of AU\$100,000 and detailing the ways in which death duties could be avoided by investment or domicile in Queensland.<sup>265</sup>

Not surprisingly, other states responded to this interstate tax competition by amending and then abolishing their own gift and estate duties. Inter-spousal transfers were exempted in South Australia and Victoria in 1976,<sup>266</sup> and in New South Wales, Western Australia and Tasmania in 1977.<sup>267</sup> Over the next two years, Tasmania enacted legislation reducing and then eliminating duties on transfers to children,<sup>268</sup> while Western Australia and Southern Australia ended all duties for persons dying after December 31, 1979.<sup>269</sup> Between 1980 and 1982, New South Wales, Victoria, and Tasmania also enacted legislation eliminating all duties.<sup>270</sup> As a result, as one commentator has written, "by the early 1980s, the momentum against any death taxation in Queensland carried all other state death duties to the grave."<sup>271</sup>

At the commonwealth level, interstate competition was obviously not an issue. Nonetheless, the political momentum of the estate duty abolition movement proved overwhelming. After Mr. Negus was elected, and before Queensland abolished its gift and estate duties, a Senate committee examined the subject of wealth transfer taxes, recommending that the Commonwealth vacate the field, leaving the states to negotiate a uniform base and rates.<sup>272</sup> Of the eight Senators on the committee, however, three filed a dissenting report recommending that the Commonwealth repeal its gift and estate duties and

moved to Queensland, though the abolition of wealth transfer taxes in these other states suggests that climate was destined to play a bigger role than taxation! See Yahoo Travel, *Brisbane History*, available at <http://au.travel.yahoo.com/guide/australia/queensland/brisbane/history.html>.

### C. *The Abolition of Wealth Transfer Taxes in New Zealand*

Though separated from the Australian mainland by more than a thousand miles of water, New Zealand was not immune from the effects of estate and gift duty abolition in Australia. Under pressure from farming interests, who complained that increased land values resulted in a larger estate tax burden,<sup>283</sup> the New Zealand Government amended the estate and gift duties in 1979 by significantly increasing the basic exemption in stages from NZ\$25,000 to NZ\$250,000 in 1982.<sup>284</sup> Little more than a decade later, the estate tax was effectively abolished by reducing to zero the rate of tax on persons dying on or after December 17, 1992.<sup>285</sup> In 1999, further legislation formally repealed New Zealand's estate tax, though its gift tax remains in place.<sup>286</sup>

Although less than one percent of decedents were subject to the tax in 1992,<sup>287</sup> abolition of estate duty was welcomed by New Zealand's leading agricultural organization, Federated Farmers of New Zealand, which praised the legislation as a "victor[y] for rural business and communities."<sup>288</sup> From the Government's perspective, while the tax raised approximately NZ\$80,000,000 in 1992, this accounted for less than 0.3% of total tax revenues.<sup>289</sup> Finally, as Cedric Sandford has suggested, New Zealand's estate duty "may also owe its demise, at least in part, to what happened in Australia, because of the free movement of nationals between New Zealand and Australia."<sup>290</sup> As an estate-type tax based on the estates of persons dying while domiciled in New Zealand, New Zealand's tax, like that of the Australian states, was particularly vulnerable to tax-motivated emigration by affluent retirees.

290. CEDRIC SANDFORD, WHY TAX SYSTEMS DIFFER: A COMPARATIVE STUDY OF THE POLITICAL ECONOMY OF TAXATION 100 (2000).

*D. Public Choice Theory and the Abolition of Wealth Transfer Taxes*

Writing in 1978, Canadian economist Richard Bird characterized the disappearance of Canada's wealth transfer taxes as "strange."<sup>291</sup> Writing in 1983, Australian economist John Head described the abolition of Australia's federal estate and gift duty as "totally incomprehensible."<sup>292</sup> More recently, Cedric Sandford argued that the abolition of wealth transfer taxes in both countries "had an accidental element about it."<sup>293</sup> While there was certainly a large element of contingency to the events culminating in the abolition of these taxes in Canada, Australia, and New Zealand, public choice theory suggests that the outcome in each of these cases is neither "strange," nor "incomprehensible," nor entirely "accidental." On the contrary, the abolition of wealth transfer taxes in these countries was in many respects a predictable response to the shifting political costs of these and other taxes.

In Canada, the Carter Commission's proposals to tax gifts and inheritances as income and capital gains at death significantly increased the political costs of the federal gift and estate tax as well as provincial succession duties—taxes for which the political costs were already high given their application to a relatively narrow group of people. While the 1968 amendments to the federal gift and estate tax might have lowered political costs by rejecting the Carter Commission's proposal to tax gifts and inheritances as income and exempting inter-spousal transfers, political costs were clearly increased by integrating the gift and estate taxes and increasing federal rates on estates valued at less than CA\$5,000,000. Not surprisingly, these amendments galvanized farming and small business interests, increasing further the political costs of Canadian wealth transfer taxes and federal tax reform more generally.<sup>294</sup>

Although the White Paper attempted to contain these political costs by rejecting the taxation of accrued gains at death, the proposals to tax capital gains at ordinary rates and widely-held shares every five years were politically very costly, since these measures, as John Head notes, would "impose obvious and substantial new burdens on a relatively small but affluent, articulate and well organized section of the community which could hardly be expected to stand idly by," resulting in benefits that "would be widely dispersed over the

294. See *supra* text accompanying note 145.

relatively unorganised mass of taxpayers at the bottom of the income scale.<sup>295</sup> Clearly expecting opposition from organized interest groups, the Government attempted to manage the tax reform process by referring its proposals to parliamentary committees. These committees, however, were completely unprepared for this task and served mostly as “sounding board[s] for those segments of public opinion that were most vocal”<sup>296</sup>—namely, the organized interest groups that had opposed the Carter Commission’s proposals from the outset.<sup>297</sup> Predictably, as John Head recounts, the parliamentary committee reports “reflect[ed] in varying degrees the overwhelmingly hostile reaction of representatives of the business and professional organizations from whom the bulk of the briefs and other submissions were received.”<sup>298</sup> Finally, confronting the prospect of substantial revenues from the introduction of capital gains tax versus minimal revenues from the gift and estate tax (75% of which was transferred to provincial governments or abated in the case of provinces collecting their own succession duties), the federal government opted to withdraw from the wealth transfer tax field, enacting a capital gains tax on half the amount of the gain with accrued gains taxable at death.<sup>299</sup>

At the provincial level, several governments endeavored to maintain wealth transfer taxes, though the eventual abolition of these taxes was probably inevitable when Alberta refused to enact a provincial succession duty and gift tax in 1972.<sup>300</sup> With low revenues, high administrative costs, and the risk of inter-provincial migration, wealth transfer taxes were abolished in Atlantic Canada by 1974, Western Canada by 1978, and Ontario in 1979.<sup>301</sup> While Quebec held out, substantially amending its succession duty in 1978, even it succumbed to the pressures of horizontal tax competition, repealing its succession duty and gift tax in 1985.<sup>302</sup>

In Australia, the political costs of estate and gift duties collected by Commonwealth and State Governments increased significantly in the late 1960s and early 1970s as inflation eroded the real value of exemptions, increasing the number of taxable estates.<sup>303</sup> Even before then, the political costs of these taxes were probably high, given their relatively narrow

application and the high administrative and compliance costs resulting from joint occupancy by both levels of government.<sup>304</sup> Not surprisingly, those who were subject to the tax established an organized movement pressing for abolition of the taxes. As the political costs of these taxes increased and government reliance on estate and gift duties as a source of revenue decreased, these governments looked at other less politically costly sources of revenue as alternatives to these taxes.<sup>305</sup> When Queensland abolished its estate and gift duties effective January 1, 1977, horizontal tax competition quickly led to the abolition of these taxes in all other states.<sup>306</sup> At the federal level, committees made recommendations for major reform, but the political momentum of the abolition movement carried the day, and commonwealth gift and estate duties were repealed effective July 1, 1979.<sup>307</sup> New Zealand held out for a little more than a decade, but the combination of political opposition, low revenues, and horizontal tax competition proved fatal there as well, as estate tax rates were reduced to zero for persons dying on or after December 17, 1992, and the tax was repealed in 1999.<sup>308</sup>

#### IV. CONCLUSION

Opponents of wealth transfer taxes are apt to take comfort both from their abolition in Canada, Australia, and New Zealand and from public choice explanations for these events, while those who support these taxes may despair. As an advocate of these taxes myself,<sup>309</sup> this is obviously not what I intend. Although wealth transfer taxes were abolished in Canada, Australia, and New Zealand, are under pressure in the United Kingdom, and are scheduled to be phased out in the United States, they appear to have retained their vitality in several other countries,<sup>310</sup> a few of which rely on these taxes more today than they did in the early 1970s.<sup>311</sup> While political costs and

309. Duff, *supra* note 5.

310. In Norway, for example, wealth transfer taxes accounted for 0.21% of tax revenue and 0.08% of GDP in 1971, and 0.2% of tax revenue and 0.09% of GDP in 2001. Similarly, in Japan, wealth transfer taxes accounted for 1.27% of tax revenue and 0.26% of GDP in 1971, and 1.22% of tax revenue and 0.35% of GDP in 2001. See O.E.C.D., *supra* note 3.

311. In France and Germany, for example, wealth transfer taxes accounted for larger percentages of tax revenues and GDP in 2001 than they did in 1970: increasing in France from 0.52% of tax revenue and 0.18% of GDP in 1971 to 1.23% of tax revenue and 0.6% of GDP in 2001, and increasing in Germany from

benefits may influence the choices that governments make among different revenue sources, these are clearly not the only factors, as political values and ideologies as well as the structure of state institutions can also play an important role.<sup>312</sup>

Nonetheless, it is important to be realistic about the considerable political challenges that are apt to make the retention or reintroduction of wealth transfer taxes especially difficult. As experience in Canada, Australia, and New Zealand suggests, the political costs of these taxes tend to be much higher than those of broad-based income, consumption, or payroll taxes, and can increase significantly if tax reforms or tax policy inertia increase the burden on small and medium-sized estates. In Canada, tax reform had this effect, as owners of small businesses and family farms opposed gift and estate tax amendments that increased rates on estates valued at less than CA\$5,000,000, as well as the possibility that capital gains tax and estate tax might be collected at death.<sup>313</sup> In Australia and New Zealand, on the other hand, tax policy inertia appears to have been at fault, as inflation eroded the value of estate and gift tax exemptions and tax avoidance was not contained, causing the burden to fall increasingly on small and medium-sized estates.<sup>314</sup>

In federal systems, moreover, the political costs of wealth transfer taxes are greatly increased by joint occupancy by both levels of government (vertical tax competition) and mobility among sub-national jurisdictions (horizontal tax competition). In Canada and Australia, the failure to effectively integrate federal and sub-national wealth transfer taxes resulted in a "duplicative" system involving increased administration costs for governments and higher compliance costs for taxpayers.<sup>315</sup> In Canada, federal withdrawal from the wealth transfer tax field effective January 1, 1972 led to the gradual demise of provincial wealth transfer taxes in the 1970s and 1980s, which succumbed to the pressures of horizontal tax competition in the absence of a federal tax with a credit for provincial taxes.<sup>316</sup> In Australia, where the

---

0.2% of tax revenues and 0.06% of GDP in 1970 to 0.4% of tax revenues and 0.15% of GDP in 2001. See *id.*

312. See, e.g., Banting, *supra* note 9, at 352-55 (considering literature on the politics of redistribution as well as public choice theory, and concluding that these approaches should be understood as complementary, not contradictory).

313. See *supra* text accompanying notes 143-46, 160-64.

314. See *supra* text accompanying notes 235-40, 246-52. In New Zealand, the exemption was only NZ\$25,000 in 1979, before it was increased in stages to NZ\$250,000 in 1982. See *supra* note 284 and accompanying text.

315. See *supra* text accompanying notes 91-99, 241-45.

316. See *supra* text accompanying notes 192-230. In the United States, where legislation phasing

commonwealth estate duty never included a credit for state level wealth transfer taxes, abolition in the State of Queensland in 1977 triggered a competitive "race to the bottom" that led to the repeal of all other state wealth transfer taxes by the early 1980s.<sup>317</sup>

For those who wish to preserve and restore the taxation of wealth transfers, then, what lessons can be drawn from the abolition of these taxes in Canada, Australia, and New Zealand? Reflecting on public choice accounts of tax policy and the historical experience in these countries, three conclusions seem evident. First, if wealth transfer taxes are to be maintained or reintroduced, the political costs of these taxes must be minimized. Crucially, basic exemptions must exclude small and medium-sized estates and be regularly adjusted for increases in asset prices.<sup>318</sup> Where these exemptions do not fully relieve the burden on family farms and small businesses,<sup>319</sup> other rules should provide for special valuation and deferral of tax so that these assets need not be sold in order to pay the tax.<sup>320</sup> Capital gains taxes must be adjusted to lessen the combined impact of two taxes when property is transferred by gift or on death, for example by permitting the donor's cost to carryover to the recipient. Administrative and compliance costs must be minimized by integrating federal and sub-national taxes or abolishing the latter, by eliminating complex rate structures based on the size of an estate and the shares received by different classes of beneficiaries, and by statutory rules designed to minimize opportunities for avoidance. Horizontal tax competition

---

out the federal gift and estate tax also eliminates the federal credit for state wealth transfer taxes, a similar process of horizontal tax competition suggests the eventual demise of these state taxes. See GRAETZ & SHAPIRO, *supra* note 2, at 209-11.

317. See *supra* text accompanying notes 260-71.

318. This lesson is particularly relevant to the United Kingdom, where political opposition to the country's inheritance tax has increased significantly as the basic exemption, which is indexed for consumer inflation, has failed to keep pace with increases in housing prices. See MAXWELL, *supra* note 6, at 14 (reporting that the current threshold of £263,000 is only slightly higher than the average cost of a house in London). This lesson is also relevant in the United States, where political opposition to the federal gift and estate tax increased significantly in the 1990s while the unified credit remained fixed at US\$600,000. Although phased increases to the credit were enacted in 1997, and accelerated and increased in 2001, the political damage may already have been done, as the very legislation that accelerated and increased the credit in 2001 also repealed the federal gift and estate tax for 2010. See generally GRAETZ & SHAPIRO, *supra* note 2.

319. In the United States, legislated increases to the unified credit are expected to dramatically reduce the number of family farms and small businesses that are subject to the federal gift and estate tax. See CONG. BUDGET OFFICE, 109th CONG., EFFECTS OF FEDERAL ESTATE TAX ON FARMS AND SMALL BUSINESSES at 13-16 (2005).

320. Perhaps not surprisingly, both the U.S. gift and estate tax and the U.K. inheritance tax include special rules to this effect. On the United States, see *id.* at 2-3. On the United Kingdom, see JOHN TILEY, REVENUE LAW 1140 (4th ed. 2001).

must be discouraged by ensuring that wealth transfer taxes are collected by federal governments in federal systems and by applying these taxes to gifts and inheritances received by beneficiaries who are residents of or domiciled in the taxing jurisdiction in addition to property situated in the taxing jurisdiction and transfers of property by persons domiciled in the taxing jurisdiction.

Second, if governments are to enact the legislative measures necessary to preserve or re-establish wealth transfer taxes, methods must be devised in order to protect public decision-making processes from the influence of organized interest groups who can be expected to oppose these measures. In Canada, for example, the Carter Commission was able to produce a report that was hailed as "a landmark in the annals of taxation" because it had both the institutional mandate and the financial resources to engage in a thorough and nonpartisan analysis of tax policy. In contrast, the parliamentary committees that considered the federal government's White Paper proposals in 1970 were thrust into a highly political exercise without the knowledge or resources to withstand the pressure exerted by organized interest groups that dominated the process. Although this was only one of many factors that led to the eventual abolition of wealth transfer taxes in Canada, its impact at the time may have been decisive.

Finally, if these taxes are to retain and attract public support, efforts must also be made to increase their perceived benefits. One strategy for this purpose might be to earmark the revenues from these taxes to a particular expenditure program, especially a program that complements the redistributive objectives of the tax such as early childhood education for children from low-income families. More generally, a greater "tax preference" for wealth transfer taxes might result from less emphasis on the revenues raised from these taxes, which are bound to be less than taxes on income, consumption, or payrolls, and more explicit acknowledgement of their symbolic and social function to lessen inequalities and unequal opportunities.<sup>321</sup> Public support for these taxes might also be improved by applying these taxes to amounts

---

321. In this respect, see 3 ONT. COMM. ON TAXATION, REPORT 136 (1967) (emphasizing the social purpose of wealth transfer taxes "to control the growth in this country of an economically powerful minority whose influence is based upon inherited wealth"); TAXATION REVIEW COMM., *supra* note 92, ¶ 24.4 (recognizing role of wealth transfer taxes to "limit[] the growth of large inherited fortunes, a trend that most people would agree to have undesirable social consequences"); see also Bird, *supra* note 145, at 138 (suggesting that public support for the wealth transfer taxes in Canada was weak because "revenue was clearly the main purpose of death taxes so far as most Canadians and Canadian governments were concerned"); and McKay, *supra* note 70, at 7 (noting the rare emphasis on the social purposes of wealth transfer taxes in New Zealand).

received by living beneficiaries rather than the aggregate amount of a decedent's estate, demonstrating that the tax is intended not to punish those who have succeeded in life or to compound the misery of death, but to regulate the distribution of wealth and opportunities among beneficiaries for whom a gift or inheritance is largely undeserved.<sup>322</sup> In fact, it is interesting to note that the decline in wealth transfer taxes in O.E.C.D. countries has been much greater among countries with estate-type taxes that fall on the estates of persons dying domiciled in the jurisdiction than countries with inheritance-type taxes that apply to amounts received by beneficiaries living in a particular jurisdiction. In addition to any lessons from the history of abolition in Canada, Australia, and New Zealand, wealth transfer tax advocates might also look to the experience of these countries where wealth transfer taxes appear to have been more resilient.
