

Marcus Scheiblecker

The Austrian Business Cycle in the European Context

PETER LANG

Internationaler Verlag der Wissenschaften

Table of contents	
Zusammenfassung	V
Abstract	IX
List of figures and tables	XV
List of abbreviations	XVII
List of variables	XIX
1. Research motivation and overview	1
2. The data	7
3. Methods of extracting business cycle characteristics	13
3.1 <i>Defining the business cycle</i>	13
3.1.1 The classical business cycle definition	13
3.1.2 The deviation cycle definition	15
3.2 <i>Isolation of business cycle frequencies</i>	16
3.2.1 Outliers	18
3.2.2 Calendar effects	20
3.2.3 Seasonal variations	21
3.2.4 The trend	23
4. Identifying the business cycle	41
4.1 <i>Construction of composite economic indices</i>	42
4.1.1 The empirical NBER approach	42
4.1.2 Index models	44
4.2 <i>Univariate determination of the business cycle</i>	52
5. Analysing cyclical comovements	55
5.1 <i>Time domain statistics for analysing comovements</i>	55

5.2	<i>Frequency domain statistics for analysing comovements</i>	56
5.2.1	Coherence	57
5.2.2	Phase spectra and mean delay	58
5.2.3	Dynamic correlation	58
5.2.4	Cohesion	59
6.	Dating the business cycle	61
6.1	<i>The expert approaches</i>	63
6.2	<i>The Bry-Boschan routine</i>	65
6.3	<i>Hidden Markovian-switching processes</i>	67
6.4	<i>Threshold autoregressive models</i>	69
7.	Analysis of turning points	71
7.1	<i>Mean and average leads and lags</i>	71
7.2	<i>Contingency tables for turning points</i>	72
7.3	<i>The intrinsic lead and lag classification of dynamic factor models</i>	74
7.4	<i>Concordance indicator</i>	74
7.5	<i>Standard deviation of the cycle</i>	75
7.6	<i>Mean absolute deviation</i>	76
7.7	<i>Triangle approximation</i>	76
8.	Results	79
8.1	<i>Isolation of business cycle frequencies</i>	79
8.1.1	First-order differences	79
8.1.2	The HP filter	80
8.1.3	The BK filter	80
8.2	<i>Determination of the reference business cycle</i>	85
8.2.1	<i>Ad-hoc selection of the business cycle reference series</i>	86
8.2.2	<i>Determination of the business cycle by a dynamic factor model approach</i>	97

8.3	<i>Dating the business cycle</i>	104
8.3.1	Dating the business cycle in the ad-hoc selection framework	104
8.3.2	Dating the business cycle in the dynamic factor model framework	115
9.	Comparing results with earlier studies on the Austrian business cycle	125
9.1	<i>Comparing the results with the study by Altissimo et al. (2001)</i>	126
9.2	<i>Comparing the results with the study by Mönch – Uhlig (2004)</i>	128
9.3	<i>Comparing the results with the study by Cheung – Westermann (1999)</i>	130
9.4	<i>Comparing the results with the study by Brandner – Neusser (1992)</i>	131
9.5	<i>Comparing the results with the study by Forni – Hallin – Lippi – Reichlin (2000)</i>	132
9.6	<i>Comparing the results with the study by Breitung – Eickmeier (2005)</i>	134
9.7	<i>Comparing the results with the study by Artis – Marcellino – Proietti (2004)</i>	134
9.8	<i>Comparing the results with the study by Vijsselaar – Albers (2001)</i>	140
9.9	<i>Comparing the results with the study by Artis – Zhang (1999)</i>	142
9.10	<i>Comparing the results with the study by Dickerson – Gibson – Tsakalotos (1998)</i>	142
9.11	<i>Comparing the results with the study by Artis – Krolzig – Toro (2004)</i>	143
9.12	<i>Comparing the results with the dating calendar of the CEPR</i>	146
9.13	<i>Comparing the results with the study by Breuss (1984)</i>	151

9.14	<i>Comparing the results with the study by Hahn – Walterskirchen (1992)</i>	153
9.15	<i>Comparison of the results of different dating procedures</i>	154
9.15.1	Turning point dates of the Austrian business cycle	155
9.15.2	Turning point dates of the euro area business cycle	156
10.	Concluding remarks	161
