UNIVERSITY PRESS

Great Clarendon Street, Oxford OX2 6DP
Oxford University Press is a department of the University of Oxford.
It furthers the University's objective of excellence in research,
scholarship, and education by publishing worldwide in

Oxford New York

Auckland Cape Town Dar es Salaam Hong Kong Karachi
Kuala Lumpur Madrid Melbourne Mexico City Nairobi
New Delhi Shanghai Taipei Toronto

With offices in

Argentina Austria Brazil Chile Czech Republic France Greece
Guatemala Hungary Italy Japan South Korea Poland Portugal
Singapore Switzerland Thailand Turkey Ukraine Vietnam

Oxford is a registered trade mark of Oxford University Press
in the UK and in certain other countries

Published in the United States
by Oxford University Press Inc., New York

Contents

General introduction 1

PART 1 *The chemical and physical factors controlling the elements of life*

1 The chemical elements in biology 7

- 1.1 The element content of living systems 7
 - 1.1.1 The biological elements 7
 - 1.1.2 Chemical speciation: limitations of life chemistry and physics 10
- 1.2 An aside: some biological chemistry of hydrogen 11
- 1.3 The economical use of resources: abundance and availability 12
- 1.4 Biological environment and element availability 15
 - 1.4.1 pH and redox potential considerations 15
 - 1.4.2 Element concentrations in aerobic environments and in some organisms 17
 - 1.4.3 Solubility products 21
- 1.5 Sulphide chemistry in water (anaerobes) 22
- 1.6 A note on homeostasis 24
- 1.7 Survival and evolution 26
- 1.8 Conclusion 26

2 The principles of the uptake and chemical speciation of the elements in biology 29

- 2.1 Introduction to chemical speciation 30
 - 2.1.1 General aspects of uptake and rejection 30
- 2.2 The separations that biology can achieve 33
- 2.3 The selective uptake of metal ions 34
- 2.4 Effective stability constants 38
- 2.5 Element uptake at equilibrium: the selectivity of the uptake 39
 - 2.5.1 Selection by charge type 42

- 2.5.2 Selection by ion size 43
- 2.5.3 Combination of radius and charge effect 46
- 2.5.4 Selection by liganding atom 46
- 2.5.5 Selection by preferential coordination geometry 48
- 2.5.6 Selection by spin-pairing stabilization 49
- 2.5.7 Selection by binding in clusters 51

2.6 Hydrolysis: hydroxides and oxenes 51

2.7 Selective control of oxidation states of metals 53

2.8 Selection by control of concentration of M and L 54

- 2.8.1 Availability and predicted cytoplasmic ion concentrations 56

2.9 Selection by transfer coefficients from water to proteins (or membranes) 58

- 2.9.1 Soft and hard acids, solvents, and extraction 60

2.10 Selection at surfaces and in precipitates 60

2.11 The selectivity of channels 61

2.12 Kinetic effects and control 62

- 2.12.1 The distribution coefficient D for ML_1 62
- 2.12.2 Kinetics of transport 63
- 2.12.3 Insertion in pre-formed holes or chelating rings 63
- 2.12.4 Energy coupling to the selective movement of M (gates and pumps) 65
- 2.12.5 A summary of the kinetics of uptake of metal ions 65

2.13 Rejection of metal ions 66

2.14 General aspects of the uptake of essential non-metals 66

2.15 Mechanisms of selection of anions based on thermodynamic properties 68

- 2.15.1 Selection by charge and size; the hydration of anions and their binding to proteins 68
- 2.15.2 Selection of anions by differences in binding affinity for different types of cationic centres 70
- 2.15.3 Kinetic binding traps for anions, with or without accompanying redox reactions 71

2.16 Redox incorporation of anions 72

2.17 Coenzymes 74

- 2.18 **Precipitates in compartments: cation and anion cooperativity** 74
- 2.19 **The application of equilibria and equilibrium exchange to carriers, buffers, pumps, enzymes and gene regulation** 76
- 2.19.1 Carriers 76
- 2.19.2 Ion buffers and stores 77
- 2.19.3 Pumps 78
- 2.19.4 Enzymes, structural proteins and transcription factors 78
- 2.20 **Genetic regulation—an introduction to control of ligand (protein) concentration** 79
- 2.21 **Concluding remarks: element handling in biological systems** 80
- 3 Physical separations of elements: compartments and zones in biology** 83
- 3.1 **General aspects** 84
- 3.2 **The nature of compartments** 85
- 3.3 **The chemical solutions and physical states of compartments** 86
- 3.4 **The role and nature of membranes** 89
- 3.5 **Different types of membrane** 90
- 3.5.1 Internal and external particles and their relationship to membranes 90
- 3.5.2 Lateral membrane organization and in-membrane flow 92
- 3.5.3 Transmembrane organization and flow 94
- 3.5.4 Flow of vesicles in cells 96
- 3.6 **Special solution conditions in vesicles** 98
- 3.7 **Cooperativity of separations and localizations** 100
- 3.8 **Summary of metal ion positioning** 100
- 3.9 **Symbiosis and multicellular systems** 101
- 3.10 **Spatial distribution of bulk non-metals** 101
- 3.11 **The spatial transfer of H, C, N, S: mobile and fixed coenzymes** 103
- 3.11.1 H (and O) transport 103
- 3.11.2 Phosphate transport 104
- 3.11.3 Carbon transport 104
- 3.11.4 Nitrogen transport 105
- 3.11.5 Sulphur transport 105
- 3.12 **Summary of non-metal transport** 105
- 3.13 **Evolution of compartments and organization: summary** 106
- 4 Kinetic considerations of chemical reactions, catalysis, and control** 108
- 4.1 **Introduction** 108
- 4.2 **Chemical transformations** 108
- 4.3 **The nature of acid-base reactions: hydrolysis and condensation** 109
- 4.4 **The hydrolysis of proteins, RNA, DNA, and other polymers** 113
- 4.5 **The nature of ion flow** 114
- 4.5.1 Signals and controls 114
- 4.5.2 Ion migration rates: electrolytics 115
- 4.5.3 Exchange 117
- 4.6 **On/off reactions: control systems** 117
- 4.7 **Electron-transfer reactions: electronics** 118
- 4.8 **Redox potentials of complexes** 122
- 4.9 **Atom transfer reactions** 123
- 4.10 **Group transfer** 125
- 4.11 **The nature of transition-metal centres in catalysis** 125
- 4.12 **Free radical reactions** 127
- 4.13 **Sizes of atoms, stereochemistry, and reaction paths** 128
- 4.13.1 Selective binding to protein (DNA) sites in pathways 128
- 4.14 **The creation of local small spaces: mechanical devices for transfer reactions** 130
- 4.14.1 Rates of conformational changes 131
- 4.15 **Networks: kinetic circuits** 132
- 4.15.1 Control over networks of reactions 132
- 4.16 **Summary** 133
- 5 Energy in biological systems and hydrogen biochemistry** 135
- 5.1 **Introduction** 135
- 5.2 **Biological systems and light** 136
- 5.3 **Oxidative energy: mitochondria** 139
- 5.4 **Proton migration coupled to redox reactions** 141
- 5.5 **The coupling of gradients to ATP formation** 142
- 5.6 **Anaerobes in the dark** 144
- 5.7 **Compartments, energy, and metabolism** 147
- 5.8 **Organization and tension** 148
- 5.9 **Motion of organisms** 148
- 5.10 **Local storage of elements and energy** 148
- 5.11 **Primitive sources of energy** 150
- 5.11.1 Sulphur compounds as energy transfer agents 151
- 5.12 **Energy networks and summary** 151
- 6 The role of biological macromolecules and polymers** 154
- A Proteins and nucleic acids** 155
- 6.1 **Introduction** 155
- 6.2 **Protein composition and basic structure** 156

- 6.3 The protein fold and the internal motions in solution 161
- 6.3.1 The folding process 164
- 6.4 The amino-acid composition of specific proteins 164
- 6.5 Structural proteins and mechanical devices 169
- 6.6 Matching of proteins and organic and inorganic ions 170
- 6.7 Enzymes 171
- 6.8 States of metal ions in proteins 173
- 6.8.1 General aspects 173
- 6.8.2 The copper blue centres 174
- 6.8.3 Metalloproteins in multiple-step reactions 175
- 6.8.4 Protein-protein assemblies and metal ions 177
- 6.8.5 Protein degradation 178
- 6.9 Summary of proteins: the proteome 179
- 6.10 Nucleic-acid composition and outline structure 180
- 6.11 Metal-ion binding to polynucleotides 182
- 6.11.1 Cavities and metal-ion binding in DNA 183
- 6.11.2 DNA sequences and mutation 184
- 6.11.3 Completed genomes 185
- 6.12 Nucleic acids and proteins 185
- 6.13 Controlled synthesis and degradation of biopolymers 186
- 6.14 Genetic control 186
- 6.14.1 A note on gene expression in multicellular organisms 189
- 6.14.2 Regulation: constitutive and induced protein production using genes 190
- 6.14.3 Constitutive and induced genes for elements 192
- 6.15 Summary of genetic control and regulation at 'equilibrium' 194
- B Polysaccharides and lipids 196**
- 6.16 Introduction 196
- 6.17 Introduction to polysaccharides 196
- 6.18 The backbones and sidechains of polysaccharides 197
- 6.19 Glycoproteins and cell surface packing 198
- 6.20 Interaction of polysaccharides with metal ions 199
- 6.21 Properties of lipids 200
- 6.21.1 Lipids in membranes as macromolecular assemblies 200
- 6.21.2 Composition and general functions of lipids 200
- 6.22 Ion association with lipid surfaces 201
- 6.22.1 The influences of selected inorganic elements 201
- 6.22.2 Potentials on membrane surfaces 202
- 6.23 Essential fatty acids 202
- 6.24 Summary of biopolymers 202
- 7 The functional value of the chemical elements in biological systems 206**
- 7.1 Introduction 206
- 7.2 Major chemical properties of elements in aqueous solutions 208
- 7.3 Biochemical functions of the chemical elements 210
- 7.4 The living process 214
- 7.5 The chemical flow in biology 217
- 7.5.1 The synthesis and degradation of the polymers of life 217
- 7.5.2 Synthesis and degradation of monomers 219
- 7.5.3 The uptake and loss of elements 221
- 7.5.4 The flow of energy in compounds 222
- 7.5.5 Equilibria and kinetic balance 224
- 7.6 The integration of activity 224
- 7.6.1 The biological selection of elements 224
- 7.6.2 Self-organization and flow patterns 225
- 7.7 Conclusion 226
- PART 2 The roles of individual elements in biology**
- 8 Sodium, potassium, and chlorine: osmotic control, electrolytic equilibria, and currents**
- 8.1 Introduction 231
- 8.2 Passive diffusion 232
- 8.3 Gated channels 235
- 8.4 Channel selectivity and possible constructions 236
- 8.5 Active transport: pumps 238
- 8.6 The nature of selective pumps 242
- 8.7 Building electrolytic circuits 242
- 8.7.1 The positions of pumps and channels 242
- 8.7.2 The ATPase pumps: some general comments 242
- 8.7.3 Exchangers 244
- 8.7.4 Organic anions and cations as current carriers 244
- 8.7.5 Currents of ions and morphogenic patterns: growth 245
- 8.8 Simple salts and the conditions of polyelectrolytes 245
- 8.8.1 Binding to DNA 246
- 8.9 Enzymes requiring potassium 246
- 8.10 Ion genetics and networks 246
- 8.10.1 K^+ , Na^+ , Cl^- circuits 247
- 8.10.2 The evolution of channels 248
- 8.11 Summary 248

- 9 The biological chemistry of magnesium: phosphate metabolism**
- 9.1 Introduction 251
 - 9.2 The spatial distribution of magnesium 251
 - 9.3 Magnesium chemistry 252
 - 9.4 Magnesium pumping in cells 255
 - 9.5 Very strong binding of magnesium 257
 - 9.6 Magnesium in walls and membranes 257
 - 9.7 Magnesium enzymes: magnesium and phosphates 257
 - 9.8 Magnesium and muscle cells 262
 - 9.8.1 Activation of tension 262
 - 9.8.2 Magnesium muscle relaxation: calcium buffering 263
 - 9.9 Magnesium and polynucleotides 264
 - 9.9.1 Structures of DNA and RNA particles 264
 - 9.9.2 Ribozymes 264
 - 9.10 Competition with polyamines 265
 - 9.11 Polymeric equilibria: tubulins, DNA, and the cell cycle 268
 - 9.12 Magnesium outside cells 268
 - 9.12.1 Sol/gel equilibria and magnesium 269
 - 9.13 Magnesium and lipids 269
 - 9.14 Magnesium and chlorophyll 269
 - 9.14.1 Chlorophyll binding in proteins 269
 - 9.14.2 Magnesium insertion in chlorophyll: chelates 271
 - 9.15 The use of manganese as a magnesium probe 272
 - 9.16 Interference of other metal ions with Mg^{2+} biochemistry 274
 - 9.17 Lithium and magnesium 274
 - 9.18 Evolution and genetics of Mg^{2+} proteins and networks 274
 - 9.19 Conclusion 276
- 10 Calcium: controls and triggers**
- 10.1 Introduction 279
 - 10.2 Free calcium ion levels 280
 - 10.2.1 Calcium levels in pulsed cells 281
 - 10.3 The calcium ion 282
 - 10.3.1 Condensation equilibria 284
 - 10.4 Protein ligands for calcium 284
 - 10.5 Magnesium/calcium competition 286
 - 10.6 The resting state of calcium in cells 287
 - 10.7 Calcium triggering: calmodulins 288
 - 10.8 The calcium trigger proteins 289
 - 10.9 S-100 proteins 291
 - 10.10 Other triggering modes: annexins and C-domains 292
 - 10.10.1 Vesicular contents and their release: exocytosis 292
 - 10.10.2 Calcium, filaments, and cell shape 294
 - 10.11 Calcium and protein phosphorylation 294
 - 10.12 Calcium buffering and calcium transport in cells 295
 - 10.13 Calcium currents: movement through membranes, channels, gates, and pumps 296
 - 10.14 Calcium exchangers 298
 - 10.15 Internal calcium-induced proteases: apoptosis 298
 - 10.16 General remarks concerning control systems in cells 298
 - 10.17 Extracytoplasmic calcium in vesicles 300
 - 10.17.1 Vesicular calcium 300
 - 10.17.2 Organelle calcium 301
 - 10.18 Extracellular calcium in circulating fluids 301
 - 10.18.1 Calcium in digestion and blood-clotting 301
 - 10.18.2 Calcium in cell-cell connections 304
 - 10.19 Calcium proteins of biominerals 305
 - 10.20 Calcium biominerals 305
 - 10.21 Intra- and extracytoplasmic calcium balances 308
 - 10.21.1 Multiple sites for calcium 308
 - 10.21.2 Cell shape 308
 - 10.21.3 Cell morphogenesis 309
 - 10.22 The calcium network today 309
 - 10.23 The genetic controls of calcium-binding proteins 312
 - 10.24 Summary of calcium biological chemistry 312
- 11 Zinc: Lewis acid catalysis and regulation**
- 11.1 Introduction to Lewis acids 315
 - 11.2 Zinc in biological space 317
 - 11.3 Availability and concentration of free Zn^{2+} ions 318
 - 11.4 Types of protein associated with zinc 319
 - 11.4.1 Zinc enzymes 320
 - 11.4.2 Zinc proteins other than enzymes 322
 - 11.4.3 Proteins for zinc distribution 322
 - 11.4.4 Zinc fingers 323
 - 11.5 Zinc exchange rates 324
 - 11.6 The number and selectivity of ligands to zinc 324
 - 11.7 Zinc as a catalytic group in enzymes 325
 - 11.7.1 Zinc as a Lewis acid 325
 - 11.7.2 Zinc and redox reactions 328
 - 11.7.3 The (constrained) entatic state and probes 328
 - 11.8 Summary of zinc proteins 329
 - 11.9 Regulatory and control roles of zinc 330
 - 11.10 The export of zinc enzymes: digestion and peptide messages 331
 - 11.10.1 Zinc enzymes and peptide hormones 332

- 11.11 Zinc enzymes and peptide hormones 332
- 11.12 Other functions of zinc outside cells 333
- 11.12.1 Cross-linking and hardening of extracellular matrices 333
- 11.12.2 Zinc in solid-state devices 333
- 11.13 Zinc genetics 334
- 11.13.1 FUR and ZUR 334
- 11.14 Zinc and evolution 334
- 11.15 Summary: is zinc today a master hormone? 335
- 12 Non-haem iron: redox reactions and controls**
- 12.1 General introduction to transition metals 341
- 12.2 Introduction to iron biological chemistry 344
- 12.3 Iron uptake 345
- 12.4 The non-haem iron proteins 348
- 12.5 The iron/sulphur proteins 348
- 12.5.1 Electron-transfer chains 351
- 12.5.2 Succinate dehydrogenase: particle II of mitochondria 351
- 12.6 Fe/S centres active as enzymes 351
- 12.6.1 The peculiarities of hydrogenase 352
- 12.7 Location of Fe/S proteins 353
- 12.8 Why are there $Fe_n S_n$ clusters in cells? 353
- 12.8.1 Genetics of $Fe_n S_n$ assembly in bacteria: genetic structure 355
- 12.9 The organization and selectivity of ferredoxins 355
- 12.9.1 Competition for Fe/S cluster sites by other metals 356
- 12.10 The Fe-O-Fe cluster 357
- 12.11 Mononuclear non-haem/non-Fe/S iron and oxidative enzymes 359
- 12.11.1 Unusual iron enzymes 362
- 12.12 Iron and secondary metabolism 362
- 12.13 Binding ligands in non-haem/non-Fe/S proteins 363
- 12.14 Extracellular iron as an acid catalyst 363
- 12.15 Summary of non-haem iron/non-Fe/S enzymes 363
- 12.16 Iron buffering and carriers 364
- 12.17 Iron controls of metabolism 365
- 12.18 Iron regulation: relationship to genes and evolution 366
- 13 Haem iron: coupled redox reactions**
- 13.1 Iron in porphyrins 370
- 13.2 Properties of isolated haem units 370
- 13.3 Classification of haem proteins by iron properties 373
- 13.4 Classification of haem proteins by secondary structure 375
- 13.5 Where are haem proteins in cells? 378
- 13.6 Haem protein functions I: electron-transfer 379
- 13.6.1 Simple electron-transfer proteins 379
- 13.6.2 Multihaem electron-transfer proteins 380
- 13.6.3 Electron-transfer/proton coupling: models 381
- 13.6.4 The membrane electron-transfer proteins: sidechain proton coupling 381
- 13.6.5 The membrane electron-transfer proteins: sidechain proton coupling 383
- 13.7 The surfaces of haem proteins 384
- 13.8 Haem-protein functions II: storage and transport 385
- 13.8.1 Dioxygen: storage, transport, and signalling 385
- 13.8.2 Nitric acid and haem receptors 385
- 13.8.3 Cytochrome c and cyanide 386
- 13.9 Haem-protein functions III: oxidases and dioxygenases 388
- 13.9.1 Cytochrome oxidase 389
- 13.9.2 Cytochrome P-450 391
- 13.9.3 Peroxidases and catalases 391
- 13.10 Substrates of haem enzymes and secondary metabolism 392
- 13.10.1 Haem and higher oxidation states of nitrogen and sulphur: reductive reactions 393
- 13.11 Haem in controls 394
- 13.12 The synthesis of haem and its genes 394
- 13.12.1 Genes for haem-containing proteins 395
- 13.12.2 Haem and the metallome 397
- 13.13 Summary of haem-iron functions 397
- 14 Manganese: dioxygen evolution and glycosylation**
- 14.1 Introduction 400
- 14.2 Manganese chemistry 400
- 14.2.1 Oxidation states 400
- 14.2.2 Structures of Mn(II) complexes with organic ligands 402
- 14.2.3 Manganese(II) equilibria and biochemistry 402
- 14.2.4 The kinetics of Mn(II) complexes 404
- 14.3 Monomeric Mn(II) and Mn(IV) chemistry 405
- 14.3.1 Structures 405
- 14.3.2 Thermodynamics 405
- 14.3.3 Kinetics of Mn(III) and Mn(IV) reactions 406
- 14.3.4 Manganese cluster chemistry 406
- 14.4 The biological chemistry of manganese 408
- 14.4.1 The occurrence and availability of manganese to organisms 408
- 14.4.2 The uptake of manganese 408
- 14.4.3 Pumping of manganese gradients 408

- 14.4.4 The distribution of Mn in biological systems 409
 - 14.5 The production of dioxygen 409
 - 14.6 Manganese and peroxide metabolism 411
 - 14.7 Manganese and hydrolytic reactions 412
 - 14.8 Manganese precipitates 413
 - 14.9 Manganese control systems and genetics 414
 - 14.10 The evolution of manganese functions 415
 - 14.11 Summary 416
- 15 Copper: extracytoplasmic oxidases and matrix formation**
- 15.1 Introduction 418
 - 15.2 Copper and electron-transfer 419
 - 15.3 Copper and dioxygen 420
 - 15.3.1 Haemocyanin 420
 - 15.3.2 A comment on copper of cytochrome oxidase 422
 - 15.3.3 Copper and extracellular oxidases 423
 - 15.3.4 Substrates of copper oxidases 424
 - 15.3.5 Copper proteins and coenzyme PQQ (pyrroloquinoline quinone) 425
 - 15.4 Copper enzymes and nitrogen oxides 426
 - 15.5 Superoxide dismutase 426
 - 15.5.1 The location 426
 - 15.5.2 The reactions of superoxide dismutases 427
 - 15.6 The transport and homeostasis of copper 428
 - 15.6.1 The buffer and carrier proteins 428
 - 15.6.2 The copper pumps 429
 - 15.6.3 The copper carriers 430
 - 15.6.4 Copper exchange rates 431
 - 15.6.5 Copper genetics 431
 - 15.7 The overall functions of copper 432
- 16 Nickel and cobalt: remnants of early life?**
- 16.1 Introduction 436
 - 16.2 The chemistry of cobalt and nickel 438
 - 16.3 Hydrogenases 441
 - 16.4 The reactions of vitamin B₁₂ 442
 - 16.5 The organometallic chemistry of life 444
 - 16.6 Hydrolytic catalysis by nickel and cobalt 444
 - 16.6.1 Urease: nickel in vacuoles 445
 - 16.6.2 Cobalt enzymes not using B12 446
 - 16.7 Nickel and cobalt uptake 447
 - 16.7.1 Genetic controls over nickel and cobalt uptake 447
 - 16.8 Cobalt and nickel genes in *E. coli* 448
 - 16.9 Conclusion 448
- 17 Molybdenum, tungsten, vanadium, and chromium**
- 17.1 Introduction 450
 - 17.2 The availabilities of molybdenum, tungsten, vanadium, and chromium 450
 - 17.3 The molybdenum enzymes: a first overview 451
 - 17.4 Biological chemistry of molybdenum 453
 - 17.4.1 Uptake of molybdate 453
 - 17.4.2 Oxidation states and redox potentials in enzymes 454
 - 17.4.3 The types and rates of molybdenum reactions 454
 - 17.4.4 Oxygen-atom transfer reactions 455
 - 17.5 The structure and function of the molybdenum enzymes 455
 - 17.5.1 Nitrogenase and its reaction centre: FeMoco 456
 - 17.5.2 Molybdenum exchange and possible control functions 458
 - 17.6 Molybdenum genetics 458
 - 17.7 Molybdenum: conclusions 459
 - 17.8 Tungsten biological chemistry 459
 - 17.9 Vanadium chemistry and biochemistry 461
 - 17.9.1 The chemistry of vanadium in biology 461
 - 17.9.2 The biological forms and functions of vanadium 462
 - 17.9.3 Vanadium and iron 465
 - 17.10 Molybdenum, vanadium, and tungsten in evolution 466
 - 17.11 The biological chemistry of chromium 468
- 18 Phosphate, silica, and chloride: acid-base non-metals**
- 18.1 Introduction to the non-metals 471
 - 18.2 Phosphate chemistry 472
 - 18.2.1 The chemistry of phosphate 472
 - 18.3 The forms and energies of bound phosphate 473
 - 18.3.1 The energy of pyrophosphates and the resting state of cells 474
 - 18.3.2 Phosphate controls 475
 - 18.3.3 Phosphate messengers 476
 - 18.3.4 Phosphate switches: protein phosphorylation, dephosphorylation, and time hierarchy 478
 - 18.3.5 Phosphates and gene transcription 479
 - 18.3.6 Phosphate minerals 480
 - 18.3.7 Phosphate uptake and transport 480
 - 18.4 Summary of phosphate functions 480
 - 18.5 Chloride channels, pumps, and exchangers 481
 - 18.6 Anion balance: chloride, phosphate, sulphate, and carboxylates 481
 - 18.7 Silicon biochemistry 482
 - 18.7.1 Occurrence and physical nature of silicon 482
 - 18.7.2 The chemistry of silica in biology 485
 - 18.7.3 Uptake and transport of silicon 486
 - 18.8 Boron in biology 487
 - 18.9 Halides and other non-metal trace elements 487

19 Sulphur, selenium, and halogens: redox non-metals

- 19.1 Introduction 489
- 19.2 Sulphur biochemistry 490
 - 19.2.1 Oxidation states and redox reactions 490
 - 19.2.2 Acid–base reactions 493
 - 19.2.3 Group transfer reactions: coupling 494
 - 19.2.4 The sulphur cycle 495
 - 19.2.5 Cellular and genetic chemistry of sulphur 495
- 19.3 Summary of sulphur chemistry 496
- 19.4 The biochemistry of selenium 497
- 19.5 Evolution and selenium 499
- 19.6 Notes on the use of the halogens 499
- 19.7 The cellular content of sulphur, selenium, and iodine (the metallome) 500

20 Integrated living systems of elements

- 20.1 Introduction 503
- 20.2 The nature of systems 505
 - 20.2.1 Earth as a series of equilibrated states 507
 - 20.2.2 Earth as a series of non-equilibrated domains 509
 - 20.2.3 Geochemical and biochemical interactions 511
- 20.3 The detailed steps in the evolution of earth's surface 511
 - 20.3.1 The evolution of organized flow on earth: patterns 513
 - 20.3.2 The persistence of patterns 514
 - 20.3.3 Persistence of patterns in an enclosed space 515
- 20.4 Macromolecules and systems 517
- 20.5 The beginnings of life 519
 - 20.5.1 The basic cellular flows and element homeostasis: the primitive metallome 519

- 20.6 Survival, reproduction and the need for a coded molecule 523
- 20.7 Evolution: introduction and morphological changes 523
 - 20.7.1 The development of internal morphology: evolution of eukaryotes 523
 - 20.7.2 The development of external morphology: evolution of multicellular organisms up to animals 524
- 20.8 Evolution and the metallome 528
 - 20.8.1 The metallome and survival strength 529
- 20.9 Changes of elements in prokaryotes 532
 - 20.9.1 'Anaerobic' sulphate-using bacteria and protection 534
- 20.10 Eukaryotes: the development of new membrane components: new lipids 534
 - 20.10.1 The metallome of early 'anaerobic' eukaryotes 536
 - 20.10.2 The aerobic single-cell eukaryotes and their metallome 537
- 20.11 Carriers 540
- 20.12 The metallome of extracellular and vesicular fluids of multicellular organisms 542
- 20.13 The metallome of brain extracellular fluid 543
- 20.14 Summary of metallome content 544
- 20.15 Changing non-metals in the proteome and in small organic molecules 544
 - 20.15.1 Changes in non-metal metabolism 547
- 20.16 Extracellular communication networks 548
 - 20.16.1 Nerves and brain 550
- 20.17 Survival of systems: summary of the value of the elements 552
