

The Biology of Peatlands

Håkan Rydin

*Department of Plant Ecology,
Uppsala University*

and

John K. Jeglum

*Department of Forest Ecology,
Swedish University of Agricultural Sciences*

with contributions from

Aljosja Hooijer, Beverley R. Clarkson, Bruce D. Clarkson,
Dmitri Mauquoy, and Keith D. Bennett

OXFORD
UNIVERSITY PRESS

Contents

LIST OF CONTRIBUTORS	x
1 Peatland habitats	1
Wetlands, peatlands, and mires	2
Peatland habitats along wetness and chemical gradients	4
Origin of groundwater and trophic classes	5
The main ecosystems: marsh, swamp, fen, bog	6
Environmental ordination	13
Frameworks for finer classification of peatlands	13
2 Diversity of life in peatlands	20
Fungi and microorganisms	20
Protozoans	24
Algae	25
Lichens	26
Plants	27
Animals	36
3 Adaptations to the peatland habitat	45
Plant adaptations to flooding and anoxic conditions	45
Plant adaptations to low nutrient availability	50
Adaptations in animals	56
4 <i>Sphagnum</i> – the builder of boreal peatlands	58
Morphology	58
<i>Sphagnum</i> life cycle	61
Diversity of <i>Sphagnum</i>	63
<i>Sphagnum</i> characteristics	63
<i>Sphagnum</i> as an environmental indicator	68
Biological interactions in <i>Sphagnum</i>	68
Dispersal and colonization	73
Dynamics and persistence in <i>Sphagnum</i> assemblages	74

5	Peat and organic soil	77
	Sedentation versus sedimentation	78
	Organic versus mineral matter content	79
	Botanical composition of peat	81
	Sampling the peat profile	83
	Peat properties	84
	Organic soils (histosols)	98
6	The peat archives	101
	Peat fossils	101
	The problem of dating profiles	108
	Peatlands as archives of changes in climate and vegetation	111
	Geographic shifts in vegetation	115
	Pleistocene peatlands	116
	Environmental research	116
	Wetland archaeology	117
7	Peatland succession and development	119
	Peatland succession	119
	Successional pathways	120
	Processes of peat formation	122
	Detailed sequences of peatland development	132
	Cyclic regeneration – a myth?	135
8	Hydrology of peatlands	138
	Water quantity	138
	Acrotelm and catotelm	144
	Water balance	146
	Peatlands as regulators of water flow	152
	Water quality	154
	Variation in water chemistry along the bog – rich fen gradient	160
9	Nutrients, light, and temperature	164
	Nutrients	164
	Light	176
	Temperature and other climatic factors	181
10	Peatland patterns and landforms	187
	Hydrologic systems	187
	Landform and hydromorphology	195

	Mire descriptions and classifications at different scales	195
	The formation of peatland patterns	213
11	Peatlands around the world	216
	Areas of peatland	216
	Peatland areas used for agriculture, forestry, and peat harvesting	219
	A brief global survey	221
	Peatlands in Tierra del Fuego	223
	<i>by Dmitri Mauquoy and Keith D. Bennett</i>	
	Restiad bogs in New Zealand	228
	<i>by Beverley R. Clarkson and Bruce D. Clarkson</i>	
	Tropical peatlands in south-east Asia	233
	<i>by Aljosja Hooijer</i>	
12	Productivity and carbon balance	239
	Biomass and productivity	239
	Decomposition	244
	Peat formation and carbon flow	248
	Peat accumulation and its limits	250
	Carbon store in peatlands	257
	Effect of drainage and forestry on C balance	259
13	Uses, functions, and management of peatlands	262
	Historical development of peatland use	263
	Agriculture on peatland	264
	Forestry on peatland	266
	Peat extraction	269
	Functions and values	273
	Management of peatlands	274
	Peatland societies and organizations	285
	REFERENCES	289
	GLOSSARY	329
	INDEX	333
