Contents

<i>Preface</i>	<i>Page</i>	<i>ix</i>
1 What is phytoplankton?		1
Terminology		1
Planktonic organisms		4
Planktonic 'algae'		8
General features of planktonic 'algae'		8
The composition of planktonic 'algae'		28
2 Mechanisms of suspension		40
The problem of suspension		40
The nature of water movements		41
Particle behaviour in turbulent columns		48
Phytoplankton settling velocities		50
Adaptive mechanisms for depressing v'		52
Vital regulation of sinking rate		77
Conclusions		81
3 Spatial and temporal distribution of phytoplankton		83
Distribution patterns: the problem of scale		83
Vertical distribution		87
Horizontal distribution		105
Temporal variations in abundance and composition of phytoplankton		112
Intra-assemblage structure and competition		120
4 Photosynthetic activity of phytoplankton		123
General features of planktonic photosynthesis		123
Photosynthetic behaviour in isolated samples of natural phytoplankton		126
Photosynthetic behaviour in non-isolated natural communities		137

5	Nutrients	157
	Nutrient requirements of phytoplankton	157
	Phosphorus	162
	Nitrogen	164
	Silicon	168
	Other nutrients	173
	Nutrient interactions	178
	Eutrophication	183
6	Growth and survival	192
	Optimal growth rates	193
	Increase in natural waters	202
	Perennation	217
	Growth and survival strategies	221
7	Loss processes	225
	What is a loss process?	225
	Hydraulic washout	228
	Sedimentation losses	233
	Death and decomposition	245
	Grazing	253
	Loss processes and phytoplankton composition	274
8	Periodicity and change in phytoplankton composition	277
	Seasonal periodicity of phytoplankton	279
	Longer-term floristic changes	321
	<i>Glossary of symbols</i>	329
	<i>References</i>	333
	<i>Index to lakes and rivers</i>	367
	<i>Index to genera/species</i>	369
	<i>General index</i>	374
