The Elements of Integration

ROBERT G. BARTLE
Professor of Mathematics
University of Illinois

John Wiley & Sons, Inc., New York · London · Sydney

Contents

1. ***Introduction*** **1**

Reasons for the development of the Lebesgue integral, comparison with the Riemann integral, the extended real number system

2. ***Measurable Functions*** **6**

Measurable sets, measurable functions and their combinations, complex-valued functions, functions between measurable spaces

3. ***Measures*** **19**

Measures, measure spaces, almost everywhere, charges

4. ***The Integral*** **27**

Simple functions and their integrals, the integral of a non-negative extended real-valued measurable function, the Monotone Convergence Theorem, Fatou's Lemma, properties of the integral

5. ***Integrable Functions*** **41**

Integrable real-valued functions, the positivity and linearity of the integral, the Lebesgue Dominated Convergence Theorem, integrands which depend on a parameter

6. ***The Lebesgue Spaces L_p*** **52**

Normed linear spaces, the L_p spaces, Hölder's Inequality, Minkowski's Inequality, the Completeness Theorem, the space L_∞

7. ***Modes of Convergence*** **65**

Relations between convergence in mean, uniform convergence, almost everywhere convergence, convergence in measure, and almost uniform convergence, Egoroff's Theorem, the Vitali Convergence Theorem

8. ***Decomposition of Measures*** **80**

The Hahn Decomposition Theorem, the Jordan Decomposition Theorem, the Radon-Nikodým Theorem, the Lebesgue Decomposition Theorem, the Riesz Representation Theorem for L_p

9. ***Generation of Measures*** **96**

Measures on algebras of sets, the extension of measures, the Carathéodory and Hahn Extension Theorems, Lebesgue and Lebesgue-Stieltjes measure, the Riesz Representation Theorem for C

10. ***Product Measures*** **113**

Rectangles, the Product Measure Theorem, sections, the Monotone Class Lemma, Tonelli's Theorem, Fubini's Theorem
