# *Contents*

## *The Elements of Integration*

### **1. Introduction** **1**

Reasons for the development of the Lebesgue integral, comparison with the Riemann integral, the extended real number system

### **2. Measurable Functions** **6**

Measurable sets and functions, combinations, complex-valued functions, functions between measurable spaces

### **3. Measures** **19**

Measures, measure spaces, almost everywhere, charges

### **4. The Integral** **27**

Simple functions and their integrals, the integral of a non-negative extended real-valued measurable function, the Monotone Convergence Theorem, Fatou's Lemma, properties of the integral

<b>5. Integrable Functions</b>	<b>41</b>
Integrable real-valued functions, positivity and linearity of the integral, the Lebesgue Dominated Convergence Theorem, integrands that depend on a parameter	
<b>6. The Lebesgue Spaces <math>L_p</math></b>	<b>52</b>
Normed linear spaces, the $L_p$ spaces, Hölder's Inequality, Minkowski's Inequality, the Completeness Theorem, the space $L_\infty$	
<b>7. Modes of Convergence</b>	<b>65</b>
Relations between convergence in mean, uniform convergence, almost everywhere convergence, convergence in measure, and almost uniform convergence, Egoroff's Theorem, the Vitali Convergence Theorem	
<b>8. Decomposition of Measures</b>	<b>80</b>
Hahn and Jordan Decomposition Theorems, the Radon-Nikodým Theorem, Lebesgue Decomposition Theorem, the Riesz Representation Theorem for $L_p$	
<b>9. Generation of Measures</b>	<b>96</b>
Measures on algebras of sets, the extension of measures, Carathéodory and Hahn Extension Theorems, Lebesgue and Lebesgue-Stieltjes measure, the Riesz Representation Theorem for $C$	
<b>10. Product Measures</b>	<b>113</b>
Rectangles, the Product Measure Theorem, sections, the Monotone Class Lemma, Tonelli and Fubini Theorems	

## *The Elements of Lebesgue Measure*

<b>11. <i>Volumes of Cells and Intervals</i></b>	<b>127</b>
Cells, intervals, length, cells in $R^p$ , $p$ -dimensional volume, translation invariance	
<b>12. <i>The Outer Measure</i></b>	<b>131</b>
The outer measure in $R^p$ , properties of $m^*$ , translation invariance	
<b>13. <i>Measurable Sets</i></b>	<b>139</b>
$\sigma$ -Algebras, measure on a $\sigma$ -algebra, the Carathéodory condition, Carathéodory's theorem, Lebesgue sets and Lebesgue measure, uniqueness of Lebesgue measure, some useful properties	
<b>14. <i>Examples of Measurable Sets</i></b>	<b>149</b>
Borel sets, null sets, translation invariance, existence of non-Borel sets	
<b>15. <i>Approximation of Measurable Sets</i></b>	<b>155</b>
Approximation by open sets, approximation by closed sets, approximation by compact sets, approximation by cells	
<b>16. <i>Additivity and Nonadditivity</i></b>	<b>161</b>
Additivity, Carathéodory revisited, inner measure	

<b>17. Nonmeasurable and Non-Borel Sets</b>	<b>165</b>
The difference set, rational equivalence, Vitali's set, non-additive decompositions, an ubiquitous set, a singular function, existence of non-Borel sets
