CONTENTS

Biographical Information	ix
Preface	xi
1 Computational Modelling	1
1.1 Introduction	1
1.2 Physical Problems in Engineering	3
1.3 Computational Modelling using the FEM	4
1.4 Simulation	7
1.5 Visualization	9
2 Introduction to Mechanics for Solids and Structures	12
2.1 Introduction	12
2.2 Equations for Three-Dimensional Solids	13
2.3 Equations for Two-Dimensional Solids	19
2.4 Equations for Truss Members	22
2.5 Equations for Beams	24
2.6 Equations for Plates	28
2.7 Remarks	34
3 Fundamentals for Finite Element Method	35
3.1 Introduction	35
3.2 Strong and Weak Forms	36
3.3 Hamilton's Principle	37
3.4 FEM Procedure	38
3.5 Static Analysis	58
3.6 Analysis of Free Vibration (Eigenvalue Analysis)	58
3.7 Transient Response	60
3.8 Remarks	64
3.9 Review Questions	65

4	FEM for Trusses	67
4.1	Introduction	67
4.2	FEM Equations	67
4.3	Worked Examples	76
4.4	High Order One-Dimensional Elements	87
4.5	Review Questions	88
5	FEM for Beams	90
5.1	Introduction	90
5.2	FEM Equations	90
5.3	Remarks	95
5.4	Worked Examples	95
5.5	Case study: Resonant Frequencies of Micro Resonant Transducer	98
5.6	Review Questions	107
6	FEM for Frames	108
6.1	Introduction	108
6.2	FEM Equations for Planar Frames	109
6.3	FEM Equations for Space Frames	114
6.4	Remarks	120
6.5	Case Study: Finite Element Analysis of a Bicycle Frame	121
6.6	Review Questions	127
7	FEM for Two-Dimensional Solids	129
7.1	Introduction	129
7.2	Linear Triangular Elements	131
7.3	Linear Rectangular Elements	141
7.4	Linear Quadrilateral Elements	148
7.5	Higher Order Elements	153
7.6	Elements with Curved Edges	160
7.7	Comments on Gauss Integration	161
7.8	Case Study: Side Drive Micro-Motor	162
7.9	Review Questions	171
8	FEM for Plates and Shells	173
8.1	Introduction	173
8.2	Plate Elements	173
8.3	Shell Elements	180
8.4	Remarks	184
8.5	Case Study: Natural Frequencies of Micro-Motor	185
8.6	Case Study: Transient Analysis of a Micro-Motor	192
8.7	Review Questions	198

9 FEM for 3D Solids	199
9.1 Introduction	199
9.2 Tetrahedron Element	200
9.3 Hexahedron Element	209
9.4 Higher Order Elements	216
9.5 Elements with Curved Surfaces	222
9.6 Case Study: Stress and Strain Analysis of a Quantum Dot Heterostructure	223
9.7 Review Questions	232
10 Special Purpose Elements	233
10.1 Introduction	233
10.2 Crack Tip Elements	234
10.3 Methods for Infinite Domains	236
10.4 Finite Strip Elements	242
10.5 Strip Element Method (SEM)	245
11 Modelling Techniques	246
11.1 Introduction	246
11.2 CPU Time Estimation	247
11.3 Geometry Modelling	248
11.4 Meshing	250
11.5 Mesh Compatibility	254
11.6 Use of Symmetry	256
11.7 Modelling of Offsets	265
11.8 Modelling of Supports	270
11.9 Modelling of Joints	271
11.10 Other Applications of MPC Equations	274
11.11 Implementation of MPC Equations	278
11.12 Review Questions	280
12 FEM for Heat Transfer Problems	282
12.1 Field Problems	282
12.2 Weighted Residual Approach for FEM	288
12.3 1D Heat Transfer Problem	289
12.4 2D Heat Transfer Problem	303
12.5 Summary	316
12.6 Case Study: Temperature Distribution of Heated Road Surface	318
12.7 Review Questions	321

13 Using ABAQUS®	324
13.1 Introduction	324
13.2 Basic Building Block: Keywords and Data Lines	325
13.3 Using Sets	326
13.4 ABAQUS Input Syntax Rules	327
13.5 Defining a Finite Element Model in ABAQUS	329
13.6 General Procedures	339
References	342
Index	345
