

Steven G. Krantz
Harold R. Parks

The Geometry of Domains in Space

Birkhäuser
Boston • Basel • Berlin

Contents

Preface	ix
1. Elementary Topics	1
1.1 Smooth Functions	1
1.2 The Concept of Defining Function	8
1.3 Measure Theory	15
2. Domains with Smooth Boundaries	27
2.1 The Tangent Bundle and Normal Bundle of the Boundary	27
2.2 The Second Fundamental Form and Curvature	34
2.3 Surfaces with Constant Mean Curvature	45
3. Measures	57
3.1 The Carathéodory Construction	57
3.2 Rectifiability	66
3.3 Minkowski Content	74
3.4 A Space-Filling Curve	81
3.5 Covering Lemmas	83
3.6 Functions of Bounded Variation	100
3.7 Domains with Finite Perimeter	107
3.8 The Area Formula	123
3.9 The Co-Area Formula	136
4. Sobolev Spaces	143
4.1 Basic Definitions and Results	143
4.2 Restriction and Trace Theorems for Sobolev Spaces	148
4.3 Domain Extension Theorems for Sobolev Spaces	153

5. Smooth Mappings	157
5.1 Sard's Theorem	157
5.2 Extension Theorems	162
5.3 Proof of the Whitney Extension Theorem	167
5.4 Application of the Whitney Extension Theorem	179
5.5 Multidimensional Versions of the Fundamental Theorem of Calculus	183
6. Convexity	191
6.1 The Classical Notion of Convexity	191
6.2 Other Characterizations of Convexity	201
6.3 Exhaustion Functions	211
6.4 Convexity of Order k	217
7. Steiner Symmetrization	223
7.1 Basic Properties	223
7.2 The Isodiametric, Isoperimetric and Brunn-Minkowski Inequalities	231
7.3 Equality in the Isoperimetric Inequality	243
8. Topics Related to Complex Analysis	247
8.1 Quasiconformal Mappings	247
8.2 Weyl's Theorem on Eigenvalue Asymptotics of a Domain in Space	259
A.1. Metrics on the Collection of Subsets of Euclidean Space	275
A.2. The Constants Associated to Euclidean Space	281
Guide to Notation	287
Bibliography	291
Index	305
