

Erratum

B. A. FRANCIS and W. M. WONHAM: The Internal Model Principle for Linear Multivariable Regulators. *Appl. Math. Opt.* 2 (1975), pp. 170–194.

The statement of Theorem 2 should be strengthened to read as follows:

“A synthesis is structurally stable at A_3 only if the compensator incorporates an internal model of A_2 which is observable by u and, if (50) holds, controllable by z ”.

This restatement eliminates an apparent circularity at the end of the proof of Proposition 3. The proofs of Thm. 2 and Prop. 3 remain unchanged.
