Preface

xi

Chapter 1 Introduction

1.1 History	1
1.2 Categorization of Lightning from Cumulonimbus	8
1.3 Negative Cloud-to-Ground Lightning	10
1.4 Positive Cloud-to-Ground Lightning	18
1.5 Artificially and Upward-Initiated Lightning	20
1.6 Cloud Discharges	21
1.7 Unusual Discharges	22
1.8 Effects of Lightning	29
References	32

Chapter 2 Lightning Phenomenology

2.1 Introduction	37
2.2 Flash Densities Averaged over Months or Years	37
2.3 Relation of Ground Flash Density to Thunderday and Thunderhour Statistics	40
2.4 Numbers of Cloud and Ground Flashes as a Function of Location	44
2.5 Phenomenological Properties of the Lightning in Individual Storms and Relationships to Meteorological Parameters	48
2.6 Properties of Ground Flashes as a Function of Latitude and Storm Type	53
References	54

Chapter 3 Cloud and Lightning Charges

3.1 Introduction	58
3.2 Cumulonimbus Electric Fields and Charges	58

3.3	Electrification Processes	65
	References	67
 Chapter 4 Preliminary Breakdown		
4.1	Existence and Statistics	71
4.2	Location	72
4.3	Electric Fields	75
4.4	Physics	79
	References	80
 Chapter 5 Stepped Leader		
5.1	Introduction	82
5.2	Types of Stepped Leaders	82
5.3	Properties of Leader Steps	84
5.4	Overall Leader Characteristics	87
5.5	Theory	93
	References	95
 Chapter 6 Attachment Process		
6.1	Introduction	99
6.2	Analytical Approach and Measurement	99
	References	107
 Chapter 7 Return Stroke		
7.1	Introduction	110
7.2	Measurements	110
7.3	Modeling	134
	References	141
 Chapter 8 Dart Leader		
8.1	Introduction	154
8.2	Optically Determined Properties	154
8.3	Electrically Determined Properties	160
8.4	Some Theoretical Considerations	163
	References	164
 Chapter 9 Continuing Current		
9.1	Introduction	167
9.2	Occurrence Statistics	169
9.3	Currents, Charges, and Charge Locations	171
9.4	M-Components	172
9.5	Initiation, Maintenance, and Demise	174
	References	176

Chapter 10 J- and K-Processes in Discharges to Ground

10.1	Introduction	179
10.2	Visual and TV Observations of the J-Process	179
10.3	Measurements of the Electric Fields of the J-Process	180
10.4	Interpretation of J-Process Electric Fields	182
10.5	The K-Process	183
	References	185

Chapter 11 Positive Lightning

11.1	Introduction	188
11.2	Occurrence Statistics and General Properties	188
11.3	Photographic Measurements	192
11.4	Electric Fields and Optical Properties	194
11.5	Current and Charge Transfer	198
	References	202

Chapter 12 Upward Lightning and the Artificial Initiation of Lightning

12.1	Introduction	205
12.2	Upward-Initiated Lightning from Fixed Structures	206
12.3	Artificial Initiation by Small Rockets	215
12.4	Comparison of Rocket-Initiated Lightning with That from Fixed Structures	223
12.5	Comparison of Rocket-Initiated and Natural Lightning	226
12.6	Comparison of Structure-Initiated and Natural Lightning	227
	References	228

Chapter 13 Cloud Discharges

13.1	Introduction	231
13.2	Simple Models for the Charge Transfer of the Overall Flash	232
13.3	Flash Characteristics	235
13.4	Initiation	237
13.5	K-Changes	242
13.6	Pulse Waveshapes	245
13.7	Narrow-Band Radiation	249
	References	251

Chapter 14 Lightning on Other Planets

14.1	Introduction	254
14.2	Techniques for Detection	256
14.3	Venus	257
14.4	Jupiter	266
14.5	Saturn	271
14.6	Summary of Information on Planetary Lightning	274
	References	276

Chapter 15 Thunder

15.1	Introduction	281
15.2	Observations and Measurements	281
15.3	Generation Mechanisms	292
15.4	Propagation	304
15.5	Acoustic Reconstruction of Lightning Channels	306
	References	307

Appendix A Electromagnetics

A.1	Electrostatics	313
A.2	Magnetostatics	323
A.3	Time-Varying Fields	325
A.4	Derivation of Currents from Fields	330
	References	334

Appendix B Statistics

B.1	Probability Density Function, Cumulative Probability Distribution Function, Arithmetic Mean, Standard Deviation, Mode, Median, and Geometric Mean	335
B.2	The Gaussian or Normal Probability Function	337
B.3	Log Normal Distribution Function	339
B.4	Other Distributions	340
B.5	χ^2	342
B.6	Linear Correlation Coefficient r	343
	References	344

Appendix C Experimental Techniques

C.1	Electric Field Measurements	345
C.2	Magnetic Field Measurements	351
C.3	Photoelectric Measurements	352
C.4	Boys and Streak-Camera Measurements	353
C.5	Spectrometers	354
C.6	Thunder Measurements	355
C.7	Lightning Location Techniques	356
	References	360

Appendix D Books Containing Information on Lightning 368

<i>Index</i>	370
