

Optics and Optoelectronics Series

**The Optical Constants
of
Bulk Materials and Films
Second Edition**

L Ward

*Honorary Research Fellow
Coventry University*

**Institute of Physics Publishing,
Bristol and Philadelphia**

Contents

Series Editors' Preface	ix
Preface to the second edition	xi
Preface to the first edition	xiii
List of Symbols	xv
1 Theoretical Background	1
1.1 Introduction	1
1.2 Behaviour of insulators	2
1.3 Theory of reflection and refraction of electromagnetic waves by insulators	4
1.4 Behaviour of absorbing materials	8
1.5 Variation with frequency—dispersion theory	16
1.6 Quantum theory of electrons in solids	24
1.7 Excitons	33
References	33
2 Experimental Methods for Measuring the Optical Constants of Bulk Materials	35
2.1 Introduction	35
2.2 Surface of specimen	35
2.3 Radiation detectors and noise	40
2.4 Radiation sources and optical windows	44
2.5 Techniques for non-absorbing materials	45
2.6 Photometric methods for absorbing materials	46
2.7 Polarimetric methods	50
2.8 Ellipsometric methods	51
2.9 Accuracy studies	62
References	74

3	Kramers–Kronig Methods for Calculating Optical Constants	77
3.1	Introduction	77
3.2	Complex frequency plane	78
3.3	Causality	79
3.4	Optical impedances	80
3.5	Contour integration	80
3.6	Practical applications of Kramers–Kronig relations	85
3.7	Sum rules	86
	References	87
4	Results for Bulk Specimens	88
4.1	Introduction	88
4.2	Metals	88
4.3	Alloys	125
4.4	Dielectrics	128
4.5	Ferroelectrics	131
4.6	Semiconductors	133
	References	143
5	Thin Films (Preparation and Theory)	151
5.1	The importance of thin films	151
5.2	Production of thin films	151
5.3	Measuring and monitoring film thickness	158
5.4	Film growth and structure	160
5.5	Optics of thin films	166
5.6	Matrix methods for calculating R and T for thin films	175
	References	179
6	Determination of the Optical Constants of Thin Films	181
6.1	Introduction	181
6.2	Photometric techniques	182
6.3	Polarimetry	188
6.4	Mixed photometry and polarimetry	188
6.5	Ellipsometry	188
6.6	Accuracy studies on techniques for n and k for thin films	189
6.7	Accuracy studies for n , k and d/λ	200
6.8	Summary	204
	References	205
7	Results for Thin Films	207
7.1	Introduction	207
7.2	Alkali metals	207
7.3	Alkaline earths group	210

7.4	Noble metals	211
7.5	Aluminium	215
7.6	Transition elements	218
7.7	Other metals	224
7.8	Alloys	227
7.9	Dielectrics	227
7.10	Semiconductors	228
	References	232
8	The Optics of Discontinuous Films	236
8.1	Introduction	236
8.2	Discrete island theories	238
8.3	Effective medium theory	246
8.4	Results for specific materials	250
8.5	Results for composites	258
	References	260
9	Applications of Optical Thin Films	263
9.1	Introduction	263
9.2	Antireflection coatings	263
9.3	High reflectance systems	267
9.4	Beam splitters	270
9.5	Polarisers using thin films	271
9.6	Neutral density filters	272
9.7	Interference filters	272
9.8	Rugate filters	280
	References	281
Appendix		283
	Values of optical constants of various materials at two laser wavelengths	
	References	287
Index		289
