

# The Origin of Stars and Planetary Systems

edited by

**Charles J. Lada**

Harvard-Smithsonian Center for Astrophysics,  
Cambridge, MA, U.S.A.

and

**Nikolaos D. Kylafis**

Department of Physics,  
University of Crete,  
Heraklion, Crete, Greece

**Kluwer Academic Publishers**

Dordrecht / Boston / London

Published in cooperation with NATO Scientific Affairs Division

## Table of Contents

Preface.....	xix
Participants .....	xxiii

I. THE NATURE OF MOLECULAR CLOUDS AND THEIR RELATION TO STAR FORMATION.....	1
-----------------------------------------------------------------------------	---

### **Molecular Clouds**

*Leo Blitz and Jonathan P. Williams*

1. Introduction.....	3
2. Formation of Molecular Clouds.....	4
2.1. Galaxy Scale Issues.....	4
2.2. The Chaff.....	7
2.3. The Association of Atomic and Molecular Gas.....	10
3. Cloud Structure.....	12
3.1. Categorization.....	12
3.2. Structure Analysis Techniques.....	14
3.3. Clumps.....	16
3.4. Fractal Structures.....	19
3.5. Departures from Self-Similarity.....	20
4. The Relation Between Cloud Structure and the IMF.....	23
5. Summary.....	25

### **The Dynamical Structure and Evolution of Giant Molecular Clouds**

*Christopher F. McKee*

1. Introduction: The Observed Characteristics of GMCs.....	29
1.1. Chemical and Thermal Properties.....	30
1.2. Dynamical Properties.....	31
1.3. Star Formation in GMCs.....	33
2. Dynamical Structure of GMCs.....	34
2.1. The Virial Theorem.....	34
2.2. Are GMCs Gravitationally Bound?.....	36
2.3. Isothermal Clouds.....	39
2.4. Magnetic Fields vs. Gravity.....	40
2.4.1. Magnetic Critical Mass.....	40
2.4.2. Toroidal Fields.....	42
2.4.3. Clouds Supported by Both Magnetic and Gas Pressure.....	43
2.4.4. Are Clouds Magnetically Supercritical? Theory.....	45
2.4.5. Observation of Magnetically Supercritical Clouds.....	45
2.5. MHD Waves in Molecular Clouds.....	47

2.5.1.	Wave Pressure.....	47
2.5.2.	Wave Damping.....	49
2.6.	Polytropic Models for Molecular Clouds.....	50
2.6.1.	Structure of Polytropes.....	50
2.6.2.	Stability of Polytropes: Locally Adiabatic Components.....	51
2.6.3.	Stability of Polytropes: Globally Adiabatic Components.....	53
2.6.4.	Multi-Pressure and Composite Polytropes.....	54
2.7.	Modeling Turbulence in Molecular Clouds.....	56
3.	Evolution of Molecular Clouds and Star Formation.....	57
3.1.	Formation of GMCs.....	57
3.2.	Dynamical Evolution of GMCs.....	58
3.3.	Photoionization-Regulated Star Formation.....	61
4.	Conclusion.....	63

## Physical Conditions in Nearby Molecular Clouds

*Philip C. Myers*

1.	Introduction.....	67
2.	Nearby Molecular Clouds.....	67
2.1.	Molecular Cloud Constituents.....	69
2.2.	Cloud Diversity.....	72
2.3.	Density Probes.....	73
3.	Dense Cores.....	74
3.1.	Star Formation.....	76
3.2.	Elongation.....	76
3.3.	Virial Balance.....	77
3.4.	Ionization and Field-Neutral Coupling.....	80
3.5.	Line Width-Size Relations.....	81
3.6.	Associated Stars.....	82
3.7.	Core Size.....	82
3.8.	Temperature.....	83
3.9.	External Excitation of Core Turbulence.....	83
4.	Cluster-Forming Cores.....	83
4.1.	Models of Clustered Star Formation.....	83
4.2.	Observational Studies of Young Clusters.....	85
4.3.	Kernel Model.....	86
5.	Inward Motions in Dense Cores.....	87
5.1.	Infall Asymmetry.....	88
5.2.	Infall Asymmetry in Starless Cores.....	90
5.3.	Turbulent Cooling Flows.....	92
6.	Summary.....	93

# Models and Observations of the Chemistry Near Young Stellar Objects

*Ewine F. Van Dishoeck and Michiel R. Hogerheijde*

1.	Introduction .....	97
2.	Gas-phase Chemistry .....	101
2.1.	Basic Molecular Processes .....	101
2.2.	Gas-Phase Networks .....	104
2.3.	Gas-Phase Models .....	105
2.3.1.	Depth-dependent vs. Time-dependent models .....	105
2.3.2.	The $C^+ \rightarrow C \rightarrow CO$ transition .....	106
2.4.	Fractionation .....	107
2.5.	Successes and Problems .....	108
3.	Grain-surface Chemistry .....	108
3.1.	Basic Surface Processes .....	108
3.2.	Thermal Processing and Evaporation .....	110
3.3.	Non-Thermal Desorption .....	111
3.4.	Energetic Processing .....	111
3.5.	Polar and Apolar Ices .....	112
3.6.	Gas-Grain Models .....	112
3.7.	Successes and Problems .....	113
4.	Determination of Molecular Abundances .....	113
4.1.	Observational Techniques .....	113
4.1.1.	Rotational line emission at (sub-)millimeter wavelengths .....	113
4.1.2.	Vibrational absorption at infrared wavelengths .....	115
4.2.	Constraining the Physical Structure .....	116
4.3.	From Observations to Abundances .....	117
5.	Chemistry in Pre-stellar Cores .....	118
5.1.	Translucent Clouds .....	119
5.2.	Dark Cloud Cores .....	120
5.3.	Ionization Fraction .....	122
6.	Chemistry in Cold Envelopes Around YSOs .....	122
6.1.	Models .....	122
6.2.	Observations .....	123
7.	Chemistry in Warm Envelopes Around Newly-formed Stars .....	124
7.1.	Warm Envelopes .....	124
7.2.	Hot Core Regions .....	125
7.3.	Outflow Regions .....	127
8.	Examples .....	128
8.1.	An Intermediate-Mass Class 0 YSO in Serpens .....	128
8.2.	The W 3 Massive Star-Forming Region .....	132
9.	Chemistry in Circumstellar Disks .....	134
10.	Concluding Remarks .....	134

## II. THE ORIGIN AND EARLY EVOLUTION OF LOW MASS STARS..... 141

### **The Formation of Low Mass Stars: An Observational Overview**

*Charles J. Lada*

1.	Introduction.....	143
2.	Stellar Observations: The Fossil Record.....	145
2.1.	Associations and Clusters.....	145
2.2.	Multiplicity.....	146
2.3.	The Initial Mass Function.....	147
2.4.	The HR Diagram and Early Stellar Evolution.....	150
3.	Giant Molecular Clouds: Sites Star Formation.....	152
3.1.	OB Associations and GMCs .....	152
3.2.	Physical Properties of GMCs.....	156
3.3.	The Structure of GMCs: Dense Cores.....	158
4.	The Young Stellar Objects .....	160
4.1.	Clustering .....	160
4.2.	Multiplicity.....	164
4.3.	The Initial Luminosity and Mass Functions.....	165
4.4.	Spectral Classification: The Evolutionary Status and Nature of Young Stellar Objects .....	170
4.4.1.	The Embedded Phase: Protostars .....	173
4.4.2.	The Revealed Phase: Pre-Main Sequence Stars.....	178
5.	The YSO Evolutionary Sequence.....	183
5.1.	The Pivotal Role of Bipolar Outflows .....	183
5.2.	Episodic Accretion?.....	186
6.	Concluding Remarks.....	187

### **Low-Mass Star Formation: Theory**

*Frank H. Shu, Anthony Allen, Hsien Shang, Eve C. Ostriker and Zhi-Yun Li*

1.	Magnetic Support of Clouds.....	193
2.	Fragmentation.....	195
3.	Empirical Measurements of the Mass-to-Flux Ration .....	196
4.	Turbulent Support of Molecular Clouds.....	198
5.	Filamentary Structure in Molecular Clouds.....	201
6.	Sustenance of Cloud Turbulence Through YSO Outflows.....	202
7.	A Toy Model of GMC Structure and Evolution.....	204
8.	Formation and Evolution of Molecular Cloud Cores.....	210
9.	The Pivotal State.....	211
10.	Self-Similar Collapse of Singular Isothermal Toroids.....	212

11.	Mass Loss from Stars and Disks.....	217
12.	Generalized X-wind Model.....	219
13.	Summary.....	223

## **Bipolar Molecular Outflows**

*R. Bachiller & M. Tafalla*

1.	Introduction.....	227
2.	Determining Outflow Properties from CO Observations.....	230
2.1.	CO Spectroscopy.....	230
2.2.	Outflow Physical Parameters.....	231
2.3.	Outflow Clumpiness.....	232
3.	Properties of Classical CO Outflows.....	233
3.1.	Outflow Geometry.....	234
3.2.	Physical Properties and Kinematics of the Outflow Gas.....	236
3.3.	Outflow Energetics.....	238
4.	Properties of Highly Collimated CO Outflows.....	239
4.1.	Geometry and Collimation.....	240
4.2.	Kinematics and Energetics.....	240
5.	Outflow Evolution.....	244
5.1.	Changes in Outflow Collimation.....	245
5.2.	Changes in the Kinematics and Energetics.....	246
5.3.	Changes in the Physical and Chemical Conditions of the Outflow Gas.....	248
5.4.	An Empirical Time Sequence of Low-Mass Outflows.....	248
6.	Shock Effects.....	249
6.1.	Shock Heating.....	249
6.2.	Shock Chemistry.....	250
6.3.	Observations of Shock Chemistry in L1157.....	252
7.	Properties of the Primary Wind.....	255
7.1.	Observations.....	256
7.2.	Models.....	257
7.2.1.	Models of Molecular Gas Acceleration.....	258
7.2.2.	Wind Launching Models.....	260

## **Herbig-Haro Flows**

*Bo Reipurth & A.C. Raga*

1.	Introduction.....	267
2.	Herbig-Haro Objects at Different Wavelengths.....	267
2.1.	Optical Spectra.....	267
2.2.	Infrared Spectra and Images.....	271
2.3.	Ultraviolet Spectra.....	274

3.	Morphological and Kinematic Properties of Jets .....	274
4.	The HH 111 Jet Complex .....	278
5.	Giant Herbig-Haro Jets .....	281
5.1.	The Giant HH 111 Jet Complex .....	283
5.2.	The Importance of Giant HH Flows .....	285
6.	Irradiated Jets .....	287
7.	Jets From Massive Stars .....	288
8.	Theoretical Models of HH Objects .....	290
8.1.	Basic Theoretical Ideas .....	290
8.2.	Plane-Parallel and Bow Shocks .....	291
8.3.	Working Surfaces .....	292
8.4.	Steady Jets .....	294
8.5.	Instabilities in Jet Beams .....	294
8.6.	Jets From Variable Sources .....	295
8.7.	Comparing Models and Observations of HH Jets .....	297

**Magnetic Fields and Star Formation: A Theory Reaching Adulthood**  
*Telemachos Ch. Mouschovias & Glenn E. Ciolek*

1.	Introduction - A modern Theory of Star Formation .....	305
2.	Five-Fluid MHD Description of Protostar Formation .....	308
2.1.	Physical Origin of the Five-Fluid Equations .....	308
2.2.	Reduction of the Five-Fluid Equations: Flux-Freezing in the Plasma .....	313
2.3.	Grain Motion and Attachment to the Magnetic Field .....	314
2.4.	Modification of the Ion Attachment Parameter by Grains .....	315
3.	Two Fluid Description of Protostar Formation .....	315
3.1.	Basic Equations .....	315
3.2.	Ambipolar Diffusion: General Considerations, and Timescales .....	316
3.3.	Magnetic Braking .....	308
4.	Results of Two-Fluid Description of Protostar Formation .....	319
4.1.	Ambipolar Diffusion in Nonrotating Models .....	320
4.2.	Rotating Models: Ambipolar Diffusion and Magnetic Braking .....	324
5.	Protostar Formation in the Four-Fluid Approximation .....	327
5.1.	Main Effects of Grains .....	327
5.2.	Detailed Comparison with Observations .....	332
5.3.	Effect of Ultraviolet Radiation .....	332
6.	Hydromagnetic Waves, Linewidths, Ambipolar Diffusion, and Star Formation .....	333
7.	Summary .....	334
8.	Appendix: Relevant Chemical Reactions in the Presence of UV Ionization .....	336

## The Nature of Young Solar-Type Stars

*François Ménard & Claude Bertout*

1.	Introduction .....	341
1.1.	Young Solar-Type Stars: The Different Flavors .....	341
1.1.1.	T Tauri Stars .....	342
1.1.2.	FU Ori Stars .....	344
1.2.	The Case for Stellar Youth .....	345
1.2.1.	Association with OB Associations and Molecular Clouds .....	345
1.2.2.	Location in the HRD and Lithium Abundance .....	346
2.	The Nature of TTS Photometric Variability .....	347
2.1.	Historical Background .....	347
2.2.	Long-Term Variability .....	348
2.3.	Mid-Term Variability .....	348
2.3.1.	Type I: Rotational Modulation Caused by Cold Magnetic Spots .....	349
2.3.2.	Types II and IIp: Variability Caused by Cold and Hot Spots .....	350
2.3.3.	Type III: Variable Obscuration by Circumstellar Dust? .....	351
2.3.4.	Are There Other Mid-Term Variability Components? .....	352
2.4.	Short-Term Variability .....	354
2.5.	Conclusions .....	355
3.	The Physics of CTTS Accretion Disks .....	355
3.1.	Historical Background .....	356
3.2.	Global Disk Observables .....	358
3.3.	Direct Observations of Accretion Disks .....	360
3.3.1.	Concluding Remarks .....	364
3.4.	Structure of the Star-Disk Interaction Zone .....	365
3.4.1.	Spectro-Photometric Evidence for Magneto- spheric Accretion .....	365
3.4.2.	Is there an Appropriate Stellar Magnetic Field? .....	366
3.4.3.	Stellar Angular Momentum Evolution .....	366
3.4.4.	Problems and Prospective .....	367

## The Evolution of Pre-Main-Sequence Stars

*Francesco Palla*

1.	The Classical Theory Of Pre-Main-Sequence Evolution .....	375
1.1.	Basic Results .....	375

1.2.	The Influence of Protostellar Evolution.....	377
1.3.	The Stellar Birthline.....	381
2.	Pre-Main-Sequence Evolution .....	382
2.1.	Protostellar Initial Conditions.....	383
2.2.	Stellar Structure Equations .....	385
2.3.	Input Physics.....	387
2.3.1.	Equation of State.....	387
2.3.2.	Opacity.....	388
2.3.3.	Treatment of Convection.....	390
2.3.4.	Nuclear Reactions .....	390
3.	A New H-R Diagram.....	391
3.1.	Low-Mass Stars: .....	392
3.2.	Intermediate-Mass Stars: .....	393
3.3.	Massive Stars: .....	395
4.	Tests to PMS Evolutionary Diagrams .....	397
4.1.	Comparison of Tracks .....	398
4.2.	Lithium Depletion.....	399
4.3.	Effects of Mass Accretion.....	400
4.4.	Effects of Binaries.....	403
4.5.	The Instability Strip for PMS Stars .....	404
III.	THE ROLE OF CLUTERING IN STAR FORMATION, THE ORIGIN OF MASSIVE STARS .....	409

## **OB Associations**

*A.G.A. Brown, A. Blaauw and R. Hoogerwerf, J.H.J. De Bruijne and P.T. De Zeeuw*

1.	Introduction.....	411
2.	The Importance of Studying OB Associations .....	413
3.	Defining Characteristics of OB Associations.....	415
4.	Recent Research .....	417
4.1.	High-Mass Stars.....	417
4.2.	Low-Mass Stars .....	421
5.	Results from Hipparcos .....	422
5.1.	Astrometric Membership Selection .....	423
5.2.	Selected Results .....	424
5.3.	Mean Distances and Motions .....	430
6.	Gould's Belt and the Origin of the Nearby Associations .....	431
7.	Future Perspectives.....	434
7.1.	The Nearby OB Associations .....	434
7.2.	Beyond the Galaxy.....	436

## The Role of Embedded Clusters in Star Formation

*Elizabeth A. Lada*

1.	Introduction.....	441
2.	The Distribution of Star Formation in Giant Molecular Clouds.....	442
3.	Properties of Embedded Clusters.....	451
3.1.	Definition and Identification of Embedded Clusters.....	451
3.2.	Stellar Densities and Structure.....	452
3.3.	The Binary Fraction in Young Clusters.....	455
3.4.	Near-Infrared Luminosity Functions.....	457
4.	The Formation of Embedded Clusters.....	461
5.	Fate of Embedded Clusters.....	464
6.	Circumstellar Disks in Cluster Environments.....	465
6.1.	Near-Infrared Studies of Circumstellar Disks.....	467
6.2.	Millimeter Continuum Observations of Circumstellar Disks and Disk Masses.....	470

## Multiple Stellar Systems: *From Binaries to Clusters*

*Ian A. Bonnell*

1.	Introduction.....	479
2.	Observations of Binary Systems.....	480
2.1.	Main Sequence Binaries.....	480
2.2.	Pre-Main Sequence Binaries.....	480
3.	Binary Formation Theories: Fission and Capture.....	481
3.1.	Fission.....	481
3.2.	Capture.....	482
3.3.	Star-Disc Capture.....	483
4.	Binary Formation through Fragmentation.....	484
4.1.	Gravitational Collapse and Fragmentation.....	484
4.2.	Fragmentation During Collapse.....	488
4.3.	Disc Fragmentation.....	490
5.	Early Evolution of Binary Systems.....	493
5.1.	Accretion in Binary Systems.....	494
5.2.	Star-Disc Interactions in Binary Systems.....	494
6.	Implications of Binary Star Formation.....	496
7.	Stellar Clusters.....	496
7.1.	Formation Mechanism.....	497
7.2.	Cluster Dynamics.....	498
7.2.1.	Violent Relaxation.....	500
7.2.2.	Mass Segregation.....	501
7.3.	Accretion and Stellar Masses.....	503
7.4.	Formation of Massive Stars.....	505
7.5.	Cluster Dissolution.....	507

8.	Binary Stars in Clusters .....	508
9.	Summary .....	509

## **Massive Star Formation**

*Ed Churchwell*

1.	Introduction .....	515
2.	Typical Properties of MSF Regions .....	516
3.	Morphologies, Ages, and Dynamics of UC HII Regions .....	517
3.1.	Champagne Flow "Blister Models" .....	518
3.2.	In-Fall Models .....	518
3.3.	Photo-Evaporating Disk Model .....	519
3.4.	Pressure Confined UC HII Regions .....	520
3.5.	Stellar Wind Supported Bow Shock Model .....	521
3.6.	Mass-Loaded Stellar Winds .....	522
4.	The Angular Expansion Rate of G5.89-0.39 .....	523
5.	Dust Associated with UC HII Regions.....	524
6.	Hot Molecular Cloud Cores .....	526
7.	Hard X-Ray Emission From MSF Regions .....	528
8.	Molecular Outflows Associated with MSF .....	530
8.1.	The Frequency of Outflows from MSF Regions .....	530
8.2.	Molecular Bipolar Outflow Properties.....	531
8.3.	Issues Raised by Massive Outflows.....	539
8.4.	Origin of the Mass in Massive Outflows.....	540
8.4.1.	Accumulated Stellar Winds .....	540
8.4.2.	Entrained ISM in Stellar Bipolar Jets.....	542
8.4.3.	Swept-Up ISM.....	544
8.4.4.	Accretion Driven Outflows .....	546
9.	Summary .....	548

## **Masers in Star-Forming Regions**

*N.D. Kylafis and K.G. Pavlakis*

1.	Introduction .....	553
2.	Basic Concepts.....	554
2.1.	Amplification .....	555
2.2.	Saturation .....	555
2.3.	Thermalization .....	556
2.4.	Beaming .....	556
2.5.	Geometry and Apparent Size.....	557
2.5.1.	Elongated Structures.....	558
2.5.2.	Nearly Spherical Structures.....	558
2.6.	Variability.....	558

2.7.	Spectra and Line Widths.....	559
2.8.	Polarization.....	560
3.	Laboratory versus Astronomical Masers.....	560
4.	Usefulness of Masers.....	561
5.	Maser Models.....	562
5.1.	Requirements.....	562
5.2.	Basic Equations.....	563
5.3.	Collisional and Radiative Pumping.....	563
6.	Masers in Star-Forming Regions.....	564
6.1.	OH Masers.....	564
6.1.1.	Observations.....	565
6.1.2.	Theoretical Calculations.....	566
6.2.	H <sub>2</sub> O Masers.....	567
6.2.1.	Observations.....	568
6.2.2.	Theoretical Calculations.....	568
7.	Location of Masers.....	569
8.	Conclusions.....	571
IV.	THE PHYSICS OF CIRCUMSTELLAR DISKS AND PLANET FORMATION.....	577

### **Circumstellar Disks**

*Steven V.W. Beckwith*

1.	Introduction.....	579
2.	The Early Solar System.....	580
3.	How Do We Know That Disks Exist?.....	581
4.	Spectral Energy Distributions.....	585
4.1.	Flat, Black Disks.....	586
4.2.	Modifying the Disk Shape, Flaring.....	593
4.3.	Exceptions: Flat Spectrum Sources.....	596
4.4.	Very Long Wavelength Emission: Measuring Disk Mass.....	600
4.5.	Summary.....	602
5.	Properties of Disks.....	603
5.1.	How Many Young Stars Have Disks?.....	603
5.2.	Disk Lifetimes.....	604
5.3.	Disk Masses.....	604
5.4.	Particle Sizes.....	606
6.	Are Disks Important?.....	608

## Accretion Disks and Eruptive Phenomena

*Scott J. Kenyon*

1.	Introduction .....	613
2.	Steady Disks .....	616
	2.1. Accretion Luminosities and Temperatures .....	616
	2.2. Turbulent Viscosity and Disk Timescales .....	621
	2.3. Disk Energy Distributions .....	623
3.	Unstable Accretion Disks .....	624
4.	Disk Eruptions in Pre-Main Sequence Stars .....	628
	4.1. Basic Properties of FU Orionis Objects .....	630
	4.2. FU Orionis Objects as Accretion Disks .....	632
	4.3. Observational Tests of Disk Models .....	633
	4.4. The Importance of FU Ori Eruptions .....	636

## The Formation of Planets

*Steven P. Ruden*

1.	Introduction .....	643
	1.1. Overview: From Dust to Planets .....	644
	1.2. Future Research Questions .....	646
2.	Structure and Evolution of Disks .....	647
	2.1. The Minimum-Mass Solar Nebula (MMSN) .....	649
	2.2. Nonlinear Nature of Disk Physics .....	652
3.	From Grains to Planetesimals .....	652
	3.1. Particle-Gas Dynamics .....	652
	3.2. Midplane Settling and Growth .....	655
	3.2.1. Radial Distribution of Solids in Protoplanetary Disks .....	657
	3.3. Planetesimal Formation .....	658
	3.4. Prospects for Observing the Early Planet Formation Epoch .....	660
	3.5. Future Research Questions .....	661
4.	From Planetesimal to Planet .....	662
	4.1. Orderly Growth .....	663
	4.2. Runaway Growth .....	664
	4.3. Final Accumulation Stages .....	667
	4.4. Future Research Questions .....	667
5.	The Formation of Gas Giant Planets .....	668
	5.1. The Core-Instability Scenario .....	668
	5.2. Tidal Interaction .....	671
	5.3. Tidal Migration .....	673
	5.4. The Survival of Giant Planets .....	675
	5.5. Future Research Questions .....	677

**Extrasolar Planets: Techniques, Results, and the Future***G.W. Marcy and R.P. Butler*

1.	Introduction .....	681
2.	The Doppler Detection Technique .....	683
3.	Doppler Results: Properties of the Candidate Planets .....	685
3.1.	Giant Planets Orbiting Within 0.1 AU .....	687
3.2.	Mass Distribution of Planetary Companions .....	689
3.3.	SemiMajor Axes of Jupiter-Mass Companions .....	691
3.4.	Orbital Eccentricity of Jupiter-Mass Companions .....	693
3.5.	Metallicity .....	695
4.	Formation of Giant Planets .....	698
5.	Future Planet-Detection Techniques .....	699
5.1.	Transits and Microlensing .....	699
5.2.	Astrometry .....	700
5.3.	Microlensing .....	701
5.4.	Space-Borne Nulling Interferometry .....	702
6.	Summary .....	702
