Preface .....	vii
Bibliography .....	ix
List of Figures and Tables.....	xiii
Definition of Symbols.....	xvii
<b>1. Introduction and historical development .....</b>	<b>1</b>
1.1. Some history of the parabolic reflector antenna .....	1
1.2. Measuring antenna parameters with cosmic radio sources .....	9
References .....	12
<b>2. Geometry of reflector antennas .....</b>	<b>14</b>
2.1. Geometrical relations of the dual reflector system .....	14
2.2. Geometry of aberrations .....	21
2.2.1. Lateral defocus .....	21
2.2.2. Axial defocus .....	25
2.3. The <i>Mathematica</i> Routines .....	29
References .....	30
<b>3. Electromagnetic theory of the reflector antenna .....</b>	<b>31</b>
3.1. Basic theory - Maxwell's equations .....	31
3.2. The primary source and surface current density .....	34
3.3. Surface current integration .....	35
3.4. Aperture integration, Kirchhoff-Helmholtz diffraction .....	39
3.5. The far-field approximation (Fraunhofer region) .....	41
3.6. The near-field approximation (Fresnel region) .....	46
3.7 The Fourier Transformation relationship .....	50
3.8. Relation between far-field and focal region field .....	52
3.9. The <i>Mathematica</i> Routines .....	52
References .....	54

---

<b>4. Antenna characteristics in practical applications</b> .....	<b>55</b>
4.1. Introduction .....	55
4.2. Illumination efficiency, beam width, sidelobe level .....	57
4.2.1. Illumination efficiency ("taper") .....	57
4.2.2. Beamwidth, sidelobe level and taper .....	61
4.3. Axial defocus .....	66
4.3.1. Gain function with axial defocus .....	68
4.3.2. Beamwidth and sidelobe variation with axial defocus .....	70
4.3.3. Depth of focus in prime focus and Cassegrain configuration .....	73
4.4. Lateral defocus - Coma, Beam-Deviation-Factor .....	74
4.4.1. Off-axis beam function - Coma .....	74
4.4.2. Gain and sidelobe level for off-axis beam .....	78
4.4.3. Beam Deviation Factor (BDF) .....	80
4.5. Aperture blocking .....	82
4.5.1. The variables and equations .....	83
4.5.2. Gain loss and sidelobe level increase due to blockage .....	86
4.6. Reflector shape deviations - "surface tolerance theory" .....	87
4.6.1. Random surface deviation .....	87
4.6.2. Numerical results with Mathematica .....	90
4.6.3. Large scale deformations - Astigmatism .....	93
4.7. The <i>Mathematica</i> Routines .....	96
References .....	107
<b>5. Measurement of antenna parameters</b> .....	<b>109</b>
5.1. Global antenna parameters .....	109
5.2. Response of an antenna to a source distributed in space .....	112
5.3. Efficiencies and Corrections for finite source size .....	114
5.3.1. Aperture and Beam Efficiency .....	114
5.3.2. Convolution of the beam with a source of finite size .....	116
5.3.3. Beam efficiency and intensity calibration .....	122
5.4. Sidelobe level and error pattern .....	124
5.4.1. Diffraction beam sidelobes .....	124
5.4.2. Error pattern due to random surface errors .....	125
5.5. Pointing and focus corrections and optimisation .....	130
5.5.1. Pointing aspects of defocus .....	131
5.5.2. General pointing model of the antenna .....	131
5.5.3. Measurement of the optimum focus .....	136
5.6. On pointing and surface error calculation from FEA .....	138
5.7. Antenna gain and radio source flux calibration .....	141
5.7.1. Determining the absolute gain of the antenna .....	142
5.7.2. Extraterrestrial sources as test transmitters .....	143

5.8. The Mathematica routines .....	146
References .....	149
<b>6. Miscellaneous subjects .....</b>	<b>152</b>
6.1. Holographic measurement of reflector surface contour .....	152
6.1.1. Introduction .....	152
6.1.2. The mathematical basis of Radio Holography .....	154
6.1.3. Details of the mathematics of nearfield holography .....	155
6.1.4. Aspects of the practical realisation - examples of results .....	161
6.1.5. Alternative methods of reflector shape measurement .....	165
6.2. Far sidelobes, Gain calibration .....	168
6.2.1. Far sidelobes and stray radiation correction .....	168
6.2.2. Absolute gain calibration with an interferometer .....	171
6.3. Chromatism, Off-set aperture .....	173
6.3.1. Chromatism - "baseline ripple" .....	173
6.3.2. Unblocked aperture - Offset antenna .....	176
6.4. Atmospheric fluctuations and dual-beam observing .....	178
6.4.1. Introduction .....	178
6.4.2. Atmospheric emission and attenuation .....	181
6.4.3. Atmospheric refraction .....	182
6.4.4. Signal fluctuations due to atmospheric turbulence .....	184
6.4.5. Observing methods to cancel atmospheric fluctuations. ....	189
6.4.6. Beam overlap in the Fresnel region of the antenna .....	192
6.5. The <i>Mathematica</i> routines .....	195
References .....	196
<b>7. Design features of some radio telescopes .....</b>	<b>201</b>
7.1. Introduction .....	201
7.2. The homologous design method .....	203
7.3. The Westerbork Synthesis Radio Telescope (WSRT) .....	207
7.4. The Effelsberg 100-m radio telescope .....	213
7.5. The IRAM 30-m Millimeter Radio Telescope (MRT) .....	218
7.6. The Heinrich Hertz Submillimeter Telescope (HHT) .....	225
7.7. The Large Millimeter Telescope (LMT) .....	229
7.8. The ALMA Prototype Antennas .....	235
7.8.1. The VertexRSI design .....	237
7.8.2. The Alcatel-EIE-Consortium (AEC) design .....	239
7.8.3. Performance evaluation of the ALMA prototype antennas .....	240
7.9. Conclusion .....	242
References .....	243
<b>Name Index .....</b>	<b>247</b>
<b>Subject Index .....</b>	<b>249</b>
