

The Physics of Phonons

G P Srivastava

Reader in Theoretical Semiconductor Physics

Department of Physics

University of Exeter

Adam Hilger

Bristol, Philadelphia and New York

Contents

Preface	xi
Acknowledgments	xv
1 Elements of Crystal Symmetry	1
1.1 Direct lattice	1
1.2 Reciprocal lattice	3
1.3 Brillouin zone	5
1.4 Crystal structure	6
1.5 Point groups	9
1.6 Space groups	10
1.7 Symmetry of the Brillouin zone	11
1.8 Jones zone	14
1.9 Surface Brillouin zone	14
1.10 Matrix representations of point groups	17
1.11 Effect of space group operations on plane waves	18
2 Lattice Dynamics in the Harmonic Approximation	
Semiclassical Treatment	20
2.1 Introduction	20
2.2 Lattice dynamics of a linear chain	23
2.3 Lattice dynamics of three-dimensional crystals	
—phenomenological models	29
2.4 Density of normal modes	41
2.5 Numerical calculation of $g(\omega)$	44
2.6 Lattice heat capacity	50
2.7 Elastic waves in cubic crystals	54
3 Lattice Dynamics in the Harmonic Approximation	
<i>Ab initio</i> Treatment	59
3.1 Introduction	59
3.2 The frozen-phonon approach	61
3.3 The linear response approach	75
3.4 The planar force constant method	81

4	Anharmonicity	88
4.1	Introduction	88
4.2	Hamiltonian of a general three-dimensional crystal	88
4.3	Effect of anharmonicity on phonon states	97
4.4	Effects of the selection rules on three-phonon processes	99
4.5	Hamiltonian of an anharmonic elastic continuum	102
4.6	Evaluation of three-phonon scattering strengths	110
4.7	The quasi-harmonic approximation and Grüneisen's constant	113
5	Theory of Lattice Thermal Conductivity	122
5.1	Introduction	122
5.2	Relaxation-time methods	128
5.3	Variational methods	136
5.4	Green-Kubo linear response theory	157
5.5	Second sound and Poiseuille flow of phonons	172
6	Phonon Scattering in Solids	175
6.1	Boundary scattering	175
6.2	Scattering by static imperfections	178
6.3	Phonon scattering in alloys	183
6.4	Anharmonic scattering	184
6.5	Phonon-electron scattering in doped semiconductors	200
6.6	Phonon scattering due to magnetic impurities in semiconductors	218
6.7	Phonon scattering from tunnelling states of impurities	221
6.8	Phonon-photon interaction	222
7	Analysis of Phonon Relaxation and Thermal Conductivity Results	230
7.1	Anharmonic decay of phonons	230
7.2	Lattice thermal conductivity of undoped semiconductors and insulators	232
7.3	Non-metallic crystals with high thermal conductivity	245
7.4	Thermal conductivity of complex crystals	245
7.5	Low-temperature thermal conductivity of doped semiconductors	247
8	Phonons in Low-dimensional Solids	253
8.1	Introduction	253
8.2	Surface vibrational modes	253
8.3	Attenuation of surface phonons	260
8.4	Phonons in superlattices	263
8.5	Thermal conductivity of superlattices	~276

8.6	Phonon interaction with a two-dimensional electron gas	278
9	Phonons in Impure and Mixed Crystals	286
9.1	Introduction	286
9.2	Localised vibrational modes in semiconductors	287
9.3	Experimental studies of long-wavelength optical phonons in mixed crystals	294
9.4	Theoretical models for long-wavelength optical phonons in mixed crystals	302
9.5	Phonon conductivity of mixed crystals	309
10	Phonons in Quasi-crystalline and Amorphous Solids	318
10.1	Introduction	318
10.2	Phonons in quasi-crystals	318
10.3	Structure and vibrational excitations of amorphous solids	324
10.4	Vibrational properties of amorphous solids	330
10.5	Low-temperature properties of amorphous solids	335
11	Phonon Spectroscopy	345
11.1	Introduction	345
11.2	Heat pulse technique	246
11.3	Superconducting tunnel junction technique	348
11.4	Optical techniques	350
11.5	Phonons from Landau levels in 2DEG	351
11.6	Phonon focusing and imaging	353
11.7	Frequency crossing phonon spectroscopy	356
11.8	Phonon echoes	358
12	Phonons in Liquid Helium	360
12.1	Introduction	360
12.2	Dispersion curve and elementary excitations	361
12.3	Specific heat	362
12.4	Interactions between the excitations	363
12.5	Kapitza resistance	368
12.6	Quantum evaporation	370
Appendices		
A	Density functional formalism	375
B	The pseudopotential method	382
C	Evaluation of integrals in section 6.4.1.4	388
D	Negative-definiteness of the phonon off-diagonal operator Λ	389
