|     |                                     |       |       |       |      |       |    |   |   |   |   |   |    |    |

#### CHAPTER III.

#### IMPLICATION AND FORMAL IMPLICATION.

| 37. | Meaning of implication                         |        |        |               |       |      |      |       |    | 33 |
|-----|--|--------|--------|---------------|-------|------|------|-------|----|----|
|     | Asserted and unasserted propositions .         |        |        |               |       |      |      |       |    | 34 |
| 39. | Inference does not require two premisses       |        |        |               |       |      |      |       |    | 35 |
| 40. | Formal implication is to be interpreted exte   | ensio  | nally  |               |       |      |      |       |    | 36 |
| 41. | The variable in a formal implication has an    | unre   | stric  | ed            | field |      |      |       |    | 36 |
| 42. | A formal implication is a single propositional | al fur | netior | 1, <b>n</b> e | ot a  | rela | tion | of tv | vo | 38 |
| 43. | Assertions                                     |        |        |               |       |      |      |       |    | 39 |
| 44. | Conditions that a term in an implication ma    | ay be  | e vari | ed            |       |      |      |       |    | 39 |
| 45. | Formal implication involved in rules of infe   | renc   | е.     |               |       |      |      |       |    | 40 |

#### CHAPTER IV.

#### PROPER NAMES, ADJECTIVES AND VERBS.

| 46.         | Proper names, adjectives and verbs distin | igui | shed |   |  |  |  | 42 |
|-------------|---|------|------|---|--|--|--|----|
| 47.         | Terms                                     |      |      | • |  |  |  | 43 |
| <b>48</b> . | Things and concepts                       |      |      |   |  |  |  | 44 |
|             | Concepts as such and as terms             |      |      |   |  |  |  |    |
| <b>5</b> 0. | Conceptual diversity                      |      |      |   |  |  |  | 46 |
|             | Meaning and the subject-predicate logic   |      |      |   |  |  |  |    |

xxvi

#### xxvii

|             |   |  |  |  | PA | GE |
|-------------|---|--|--|--|----|----|
| 52.         | Verbs and truth                                 |  |  |  |    | 47 |
| 53.         | All verbs, except perhaps is, express relations |  |  |  |    | 49 |
| <b>54</b> . | Relations per se and relating relations         |  |  |  |    | 49 |
| 55.         | Relations are not particularized by their terms |  |  |  |    | 50 |

## CHAPTER V.

#### DENOTING.

| 56. | Definition of denoting                          |      | •    |       |      |      |     |      |     | • | 53 |
|-----|---|------|------|-------|------|------|-----|------|-----|---|----|
| 57. | Connection with subject-predicate proposition   |      |      |       |      |      |     |      |     |   | 54 |
| 58. | Denoting concepts obtained from predicates      |      |      |       |      |      |     |      |     |   | 55 |
| 59. | Extensional account of all, every, any, a and   | some |      |       |      |      |     |      |     |   | 56 |
| 60. | Intensional account of the same                 |      |      |       |      |      |     |      |     |   | 58 |
| 61. | Illustrations                                   |      |      |       |      |      |     | •    |     |   | 59 |
| 62. | The difference between all, every, etc. lies in | the  | obje | cts ( | dena | ted, | not | in i | the |   |    |
|     | way of denoting them                            |      |      |       |      |      |     |      |     |   | 61 |
| 63. | The notion of the and definition                |      |      |       |      |      |     |      |     |   | 62 |
| 64. | The notion of the and identity                  |      |      |       |      |      |     |      |     |   | 63 |
|     | Summary   |      |      |       |      |      |     |      |     |   | 64 |

#### CHAPTER VI.

#### CLASSES.

| 66. | Combination of intensional and extension     | al si | tand  | lpoin  | ts i | requi | ed   |       |       |     | •  | 66 |
|-----|--|-------|-------|--------|------|-------|------|-------|-------|-----|----|----|
| 67. | Meaning of <i>class</i>                      |       |       |        |      |       |      |       |       |     |    | 67 |
| 68. | Intensional and extensional genesis of class | SS    |       |        |      |       |      |       |       |     |    | 67 |
| 69. | Distinctions overlooked by Peano             |       |       |        |      |       |      |       |       |     |    | 68 |
| 70. | The class as one and as many                 |       |       |        |      |       |      |       |       |     |    | 68 |
| 71. | The notion of and                            |       |       |        |      |       |      |       |       |     |    | 69 |
| 72. | All men is not analyzable into all and men   | ı     |       |        |      |       |      |       |       |     | •  | 72 |
| 73. | There are null class-concepts, but there is  | s no  | nu    | ll cla | SS   |       |      |       |       |     |    | 73 |
| 74. | The class as one, except when it has one t   | erm   | ı, is | disti  | nct  | from  | the  | cla   | ss as | mai | лу | 76 |
| 75. | Every, any, a and some each denote one       | obje  | ect,  | but a  | in a | ambig | guou | is of | ne    |     |    | 77 |
| 76. | The relation of a term to its class          |       |       |        |      |       |      |       |       |     |    | 77 |
| 77. | The relation of inclusion between classes    |       |       | •      |      |       |      |       |       |     |    | 78 |
| 78. | The contradiction                            |       |       |        |      |       |      |       |       |     |    | 79 |
| 79. | Summary                                      |       |       |        |      |       | •    | •     | •     |     |    | 80 |

# CHAPTER VII.

#### PROPOSITIONAL FUNCTIONS.

|     | Indefinability of such that                     |       |     |       |       |      |      |       |   | 82 |
|-----|---|-------|-----|-------|-------|------|------|-------|---|----|
| 81. | Where a fixed relation to a fixed term is asser | rted, | a p | rop   | ositi | onal | fune | ction | ì |    |
|     | can be analyzed into a variable subject a       | nd a  | cor | istar | nt as | sert | ion  |       |   | 83 |
| 82. | But this analysis is impossible in other cases  |       |     |       |       |      |      |       |   | 84 |
| 83. | Variation of the concept in a proposition .     |       |     |       |       |      |      |       |   | 86 |

xxviii

|     |                          |       |      |       |       |       |       |      |      |      |       |       |       |   | PA | ٩GE |
|-----|--------------------------|-------|------|-------|-------|-------|-------|------|------|------|-------|-------|-------|---|----|-----|
| 84. | Relation of propositiona | l fun | ctio | ns to | o ela | sses  |       |      |      |      |       |       |       |   |    | 88  |
| 85. | A propositional function | is in | ge   | nera  | l no  | t ana | alyza | able | into | a co | onsta | ant a | ınd a | L |    |     |
|     | variable element         |       | •    |       |       |       | •     |      |      |      |       |       |       |   |    | 88  |

#### CHAPTER VIII.

#### THE VARIABLE.

| 86. | Nature of the variable          |       |     |       | •    |      | • |  |   |   | 89 |
|-----|---------------------------------|-------|-----|-------|------|------|---|--|---|---|----|
| 87. | Relation of the variable to any |       |     |       |      |      |   |  |   |   | 89 |
| 88. | Formal and restricted variables |       |     |       |      |      | • |  |   |   | 91 |
| 89. | Formal implication presupposes  | any   |     |       |      |      |   |  |   |   | 91 |
| 90. | Duality of any and some         |       |     |       |      |      |   |  |   |   | 92 |
| 91. | The class-concept propositional | funct | ion | is in | defi | nabl | е |  |   | • | 92 |
|     | Other classes can be defined by |       |     |       |      |      |   |  |   |   |    |
| 93. | Analysis of the variable        |       |     |       |      |      |   |  | • |   | 93 |

## CHAPTER IX.

#### RELATIONS.

| 94.         | Characteristics of relations          | •     |       |        |      |       |       | • |  | • | • | 95 |
|-------------|---------------------------------------|-------|-------|--------|------|-------|-------|---|--|---|---|----|
| 95.         | Relations of terms to themselves .    |       |       |        |      |       |       |   |  |   |   | 96 |
| 96.         | The domain and the converse domain    | in of | a re  | elatio | on   |       |       |   |  |   |   | 97 |
| 97.         | Logical sum, logical product and rela | ative | e pro | oduc   | t of | relat | tions |   |  |   |   | 98 |
| 98.         | A relation is not a class of couples  |       |       |        |      |       |       |   |  |   |   | 99 |
| <b>99</b> . | Relations of a relation to its terms  |       |       |        |      |       |       |   |  |   |   | 99 |

#### CHAPTER X.

#### THE CONTRADICTION.

| 100. | Consequences of the contradiction .        |       |        |       |       |      |      |    |     | 101 |
|------|--|-------|--------|-------|-------|------|------|----|-----|-----|
| 101. | Various statements of the contradiction    |       |        |       |       |      |      |    |     | 102 |
| 102. | An analogous generalized argument          |       |        |       |       |      |      |    |     | 102 |
| 103. | Variable propositional functions are in ge | nera  | ıl ina | dmi   | issib | le   |      |    |     | 103 |
| 104. | The contradiction arises from treating as  | one   | a cla  | ass v | vhic  | h is | only | ma | any | 104 |
| 105. | Other primâ facie possible solutions appe  | ear i | nade   | qua   | te    |      |      |    |     | 105 |
| 106. | Summary of Part I                          |       | •      |       |       |      |      |    |     | 106 |

# PART II.

#### NUMBER.

#### CHAPTER XI.

#### DEFINITION' OF CARDINAL NUMBERS.

| 107. | Plan of Part II |  |  |  |  | • | • |  | • |  | • |  | • |  |  |  | 111 |
|------|-----------------|--|--|--|--|---|---|--|---|--|---|--|---|--|--|--|-----|
|------|-----------------|--|--|--|--|---|---|--|---|--|---|--|---|--|--|--|-----|

|      |                                      |  |  |  |  |   | PAGE |
|------|--------------------------------------|--|--|--|--|---|------|
| 108. | Mathematical meaning of definition   |  |  |  |  |   | 111  |
| 109. | Definition of numbers by abstraction |  |  |  |  |   | 112  |
| 110. | Objections to this definition .      |  |  |  |  | • | 114  |
| 111. | Nominal definition of numbers .      |  |  |  |  | • | 115  |

## CHAPTER XII.

#### ADDITION AND MULTIPLICATION.

| 112. | Only integers to be considered at present                 |  |  |   | 117 |
|------|---|--|--|---|-----|
| 113. | Definition of arithmetical addition                       |  |  | • | 117 |
| 114. | Dependence upon the logical addition of classes           |  |  |   | 118 |
| 115. | Definition of multiplication                              |  |  |   | 119 |
| 116. | Connection of addition, multiplication and exponentiation |  |  |   | 119 |

## CHAPTER XIII.

#### FINITE AND INFINITE.

.

| 117. | Definition of finite and infinite |      |     |       |        |       |    |  | • |  | 121 |
|------|-----------------------------------|------|-----|-------|--------|-------|----|--|---|--|-----|
| 118. | Definition of $a_0$               |      |     |       |        |       |    |  |   |  | 121 |
| 119. | Definition of finite numbers by   | matł | nem | atica | ıl inc | ducti | on |  |   |  | 123 |

#### CHAPTER XIV.

#### THEORY OF FINITE NUMBERS.

| 120. | Peano's indefinables and primitive propositions .     |  |  |  | 124 |
|------|---|--|--|--|-----|
| 121. | Mutual independence of the latter                     |  |  |  | 125 |
| 122. | Peano really defines progressions, not finite numbers |  |  |  | 125 |
| 123. | Proof of Peano's primitive propositions               |  |  |  | 127 |

#### CHAPTER XV.

#### ADDITION OF TERMS AND ADDITION OF CLASSES.

| 124. | Philosophy and mathematics distinguished                   |      |      |    |   | 129 |
|------|--|------|------|----|---|-----|
| 125. | Is there a more fundamental sense of number than that defi | ined | abov | e? |   | 130 |
| 126. | Numbers must be classes                                    |      |      |    |   | 131 |
| 127. | Numbers apply to classes as many                           |      | • •  |    |   | 132 |
| 128. | One is to be asserted, not of terms, but of unit classes . |      |      |    |   | 132 |
| 129. | Counting not fundamental in arithmetic                     |      |      |    | • | 133 |
| 130. | Numerical conjunction and plurality                        |      |      |    |   | 133 |
| 131. | Addition of terms generates classes primarily, not numbers | •    |      |    |   | 135 |
| 132. | A term is indefinable, but not the number 1                |      |      |    |   | 135 |

## CHAPTER XVI.

#### WHOLE AND PART.

PAGE

| 133. | Single terms may be either simple or complex                    |  |   |   | 137 |
|------|---|--|---|---|-----|
| 134. | Whole and part cannot be defined by logical priority            |  | • |   | 137 |
| 135. | Three kinds of relation of whole and part distinguished         |  |   |   | 138 |
| 136. | Two kinds of wholes distinguished                               |  |   |   | 140 |
| 137. | A whole is distinct from the numerical conjunction of its parts |  |   |   | 141 |
| 138. | How far analysis is falsification                               |  |   | • | 141 |
| 139. | A class as one is an aggregate                                  |  |   |   | 141 |

#### CHAPTER XVII.

#### **INFINITE WHOLES.**

| 140. | Infinite aggregates must be admit     | tted | Ι.   |     |      |    |  |     |  | 143 |
|------|---------------------------------------|------|------|-----|------|----|--|-----|--|-----|
| 141. | Infinite unities, if there are any, a | ire  | unkı | now | n to | us |  |     |  | 144 |
| 142. | Are all infinite wholes aggregates    | of   | term | ıs? |      |    |  | • • |  | 146 |
|      | Grounds in favour of this view        |      |      |     |      |    |  |     |  |     |
|      |                                       |      |      |     | 2    |    |  |     |  |     |

#### CHAPTER XVIII.

#### RATIOS AND FRACTIONS.

| 144. | Definition of ratio   | • | 149 |
|------|---|---|-----|
|      | Ratios are one-one relations  |   | 150 |
| 146. | Fractions are concerned with relations of whole and part              |   | 150 |
| 147. | Fractions depend, not upon number, but upon magnitude of divisibility |   | 151 |
| 148. | Summary of Part II  |   | 152 |

# PART III.

# QUANTITY.

#### CHAPTER XIX.

#### THE MEANING OF MAGNITUDE.

| 149. | Previous views on the relation of number and quantity    |  |   | - | 157 |
|------|--|--|---|---|-----|
| 150. | Quantity not fundamental in mathematics                  |  |   |   | 158 |
| 151. | Meaning of magnitude and quantity                        |  |   |   | 159 |
| 152. | Three possible theories of equality to be examined .     |  |   |   | 159 |
| 153. | Equality is not identity of number of parts              |  |   |   | 160 |
| 154. | Equality is not an unanalyzable relation of quantities . |  |   |   | 162 |
| 155. | Equality is sameness of magnitude                        |  |   |   | 164 |
| 156. | Every particular magnitude is simple                     |  | • |   | 164 |
| 157. | The principle of abstraction                             |  | • |   | 166 |

|      |         |   |  |  |  |   |  |  |  |  | PAGE |
|------|---------|---|--|--|--|---|--|--|--|--|------|
| 158. | Summary | y |  |  |  |   |  |  |  |  | 167  |
|      | Note    |   |  |  |  | - |  |  |  |  | 168  |

#### CHAPTER XX.

## THE RANGE OF QUANTITY.

| 159. | Divisibility | does    | not b  | pelon | g to  | all q | uanti | ties |      |      |      |      |       |       |    | 170 |
|------|--------------|---------|--------|-------|-------|-------|-------|------|------|------|------|------|-------|-------|----|-----|
| 160. | Distance     |         |        |       |       |       |       |      |      |      |      |      | •     |       |    | 171 |
|      | Differential |         |        |       |       |       |       |      |      |      |      |      |       |       |    | 173 |
| 162. | A magnitud   | le is r | never  | divis | ible, | but   | may   | be   | a ma | agni | tude | of o | livis | ibili | ty | 173 |
| 163. | Every mag    | nitude  | e is u | nanal | yzab  | le    |       |      |      |      |      |      |       |       | •  | 174 |

#### CHAPTER XXI.

#### NUMBERS AS EXPRESSING MAGNITUDES: MEASUREMENT.

| 164. | Definition of me  | easuren  | nent   |       |       |      |       |      |     |      |      |    | • |   | • | 176 |
|------|-------------------|----------|--------|-------|-------|------|-------|------|-----|------|------|----|---|---|---|-----|
| 165. | Possible ground   | s for ho | olding | g all | mag   | mitu | ıdes  | to b | e m | easu | rabl | е. |   |   |   | 176 |
| 166. | Intrinsic measur  | ability  |        |       |       |      |       |      | •   |      |      |    |   |   |   | 177 |
| 167. | Of divisibilities |          |        |       |       |      |       |      |     |      |      |    |   | • |   | 178 |
| 168. | And of distances  | s        |        |       |       |      |       |      |     |      |      |    |   |   |   | 179 |
| 169. | Measure of dista  | ance an  | d me   | asu   | re of | stre | etch  |      |     |      |      |    |   |   |   | 181 |
| 170. | Distance-theorie  | es and s | streto | h-th  | eori  | es o | f geo | ome  | try |      |      |    |   |   |   | 181 |
| 171. | Extensive and in  | ntensiv  | e ma   | gnit  | udes  | •    |       |      |     | •    |      |    |   |   |   | 182 |

#### CHAPTER XXII.

#### ZERO.

| 172. | Difficulties as to zero   |      |       |      |       |       |      | •     | •   |   |  | 184 |
|------|---------------------------|------|-------|------|-------|-------|------|-------|-----|---|--|-----|
| 173. | Meinong's theory .        |      |       | -    |       |       |      |       |     |   |  | 184 |
| 174. | Zero as minimum           |      |       |      |       |       |      |       |     |   |  | 185 |
| 175. | Zero distance as identity |      |       |      |       |       |      |       |     |   |  | 186 |
| 176. | Zero as a null segment    |      |       |      |       |       |      |       |     | • |  | 186 |
| 177. | Zero and negation .       |      |       |      |       |       |      |       |     |   |  | 186 |
| 178. | Every kind of zero magn   | itud | le is | in a | a sei | nse i | inde | finał | ole |   |  | 187 |

#### CHAPTER XXIII.

## INFINITY, THE INFINITESIMAL, AND CONTINUITY.

| 313. | Orders of infinity and infinitesimality                   |   |  |  | 335 |
| 314. | Summary   | • |  |  | 337 |

#### CHAPTER XLI.

#### PHILOSOPHICAL ARGUMENTS CONCERNING THE INFINITESIMAL.

| 0.1 5 |   |   | 000 |
|-------|---|---|-----|
| 315.  | Current philosophical opinions illustrated by Cohen                   | • | 338 |
| 316.  | Who bases the calculus upon infinitesimals                            |   | 338 |
| 317.  | Space and motion are here irrelevant                                  |   | 339 |
| 318.  | Cohen regards the doctrine of limits as insufficient for the calculus |   | 339 |
| 319.  | And supposes limits to be essentially quantitative                    |   | 340 |
| 320.  | To involve infinitesimal differences                                  |   | 341 |
| 321.  | And to introduce a new meaning of equality                            |   | 341 |
| 322.  | He identifies the inextensive with the intensive                      |   | 342 |
| 323.  | Consecutive numbers are supposed to be required for continuous change |   | 344 |
| 324.  | Cohen's views are to be rejected                                      |   | 344 |

#### CHAPTER XLII.

#### THE PHILOSOPHY OF THE CONTINUUM.

| 325. | Philosophical sense of co | ontir | nuity | y not | t he  | e in | que   | stio | n   |  |  | 346 |
|------|---------------------------|-------|-------|-------|-------|------|-------|------|-----|--|--|-----|
| 326. | The continuum is comp     | osed  | of    | mutu  | ıally | exte | ernal | l un | its |  |  | 346 |
| 327. | Zeno and Weierstrass      |       |       |       |       |      |       |      |     |  |  | 347 |

Geometrical theory of imaginary point-pairs . | Historical development of non-quantitative geometry .       .         Non-quantitative theory of distance .       .         In descriptive geometry .       .         And in projective geometry .       .         Geometrical theory of imaginary point-pairs .       . | Historical development of non-quantitative geometry       .         Non-quantitative theory of distance       .       .         In descriptive geometry       .       .       .         And in projective geometry       .       .       .         Geometrical theory of imaginary point-pairs       .       .       . | Historical development of non-quantitative geometry       .       .         Non-quantitative theory of distance       .       .       .         In descriptive geometry       .       .       .       .         And in projective geometry       .       .       .       .         Geometrical theory of imaginary point-pairs       .       .       .       . | Historical development of non-quantitative geometry       . | Non-quantitative geometry has no metrical presuppositions |

### CHAPTER XLIX.

#### DEFINITIONS OF VARIOUS SPACES.

| 412. | All kinds of spaces are definable in purely logical terms |  |  | 429 |
|------|---|--|--|-----|
| 413. | Definition of projective spaces of three dimensions .     |  |  | 430 |
| 414. | Definition of Euclidean spaces of three dimensions        |  |  | 432 |
| 415. | Definition of Clifford's spaces of two dimensions         |  |  | 434 |

#### CHAPTER L.

#### THE CONTINUITY OF SPACE.

| 416.         | The continuity of a projective space   | 437 |
|--------------|--|-----|
| 417.         | The continuity of a metrical space   | 438 |
| 418.         | An axiom of continuity enables us to dispense with the postulate of the circle | 440 |
| 419.         | Is space prior to points?  | 440 |
| <b>420</b> . | Empirical premisses and induction  | 441 |
| 421.         | There is no reason to desire our premisses to be self-evident                  | 441 |
| 422.         | Space is an aggregate of points, not a unity                                   | 442 |

## CHAPTER LI.

#### LOGICAL ARGUMENTS AGAINST POINTS.

| 423. | Absolute and relative position               |  |   | •  |  | 445 |
|------|--|--|---|----|--|-----|
| 424. | Lotze's arguments against absolute position  |  | • |    |  | 446 |
| 425. | Lotze's theory of relations                  |  |   |    |  | 446 |
| 426. | The subject-predicate theory of propositions |  |   | ۰. |  | 448 |

|      |  |   |  |  | PAGE |
|------|--|---|--|--|------|
| 427. | Lotze's three kinds of Being                   |   |  |  | 449  |
| 428. | Argument from the identity of indiscernibles . |   |  |  | 451  |
| 429. | Points are not active                          |   |  |  | 452  |
| 430. | Argument from the necessary truths of geometry |   |  |  | 454  |
| 431. | Points do not imply one another                | • |  |  | 454  |

## CHAPTER LII.

#### KANT'S THEORY OF SPACE.

| 432. | The present work is diametrically | y op | pose  | d to  | Kai  | nt   |      |  |  | 456 |
|------|-----------------------------------|------|-------|-------|------|------|------|--|--|-----|
| 433. | Summary of Kant's theory .        |      |       | •     |      |      |      |  |  | 456 |
| 434. | Mathematical reasoning requires   | no   | extra | ι-log | ical | elen | aent |  |  | 457 |
| 435. | Kant's mathematical antinomies    |      |       | •     |      |      |      |  |  | 458 |
| 436. | Summary of Part VI                |      |       |       |      |      | •    |  |  | 461 |

# PART VII.

# MATTER AND MOTION.

#### CHAPTER LIII.

#### MATTER.

| 437. | Dynamics is here considered as a branch of pure    | mathe | matic | s |  | 465 |
|------|--|-------|-------|---|--|-----|
| 438. | Matter is not implied by space                     |       |       |   |  | 465 |
| 439. | Matter as substance                                |       |       |   |  | 466 |
| 440. | Relations of matter to space and time              |       |       |   |  | 467 |
| 441. | Definition of matter in terms of logical constants |       |       |   |  | 468 |

#### CHAPTER LIV.

#### MOTION.

| <b>44</b> 2. | Definition of change              |  |  |  |   |  | 469 |
|--------------|-----------------------------------|--|--|--|---|--|-----|
|              | There is no such thing as a state |  |  |  |   |  |     |
| <b>44</b> 4. | Change involves existence .       |  |  |  |   |  | 471 |
| 445.         | Occupation of a place at a time   |  |  |  |   |  | 472 |
| 446.         | Definition of motion              |  |  |  |   |  | 472 |
| 447.         | There is no state of motion .     |  |  |  | • |  | 473 |

#### CHAPTER LV.

#### CAUSALITY.

| 448. | The descriptive theory of dynamics             | • |  |  |  | 474 |
|------|--|---|--|--|--|-----|
| 449. | Causation of particulars by particulars        |   |  |  |  | 475 |
| 450. | Cause and effect are not temporally contiguous |   |  |  |  | 476 |

|      |   |  |  |  | PAGE |
|------|---|--|--|--|------|
| 451. | Is there any causation of particulars by particulars? |  |  |  | 477  |
| 452. | Generalized form of causality                         |  |  |  | 478  |

#### CHAPTER LVI.

#### DEFINITION OF A DYNAMICAL WORLD.

| 453. | Kinematical motions . |  |  |  |  |  |   | 480 |
|------|-----------------------|--|--|--|--|--|---|-----|
| 454. | Kinetic motions       |  |  |  |  |  | • | 480 |

#### CHAPTER LVII.

#### NEWTON'S LAWS OF MOTION.

| 455. | Force and acceleration are fictions               |     |  | • |  |    | 482 |
|------|---|-----|--|---|--|----|-----|
| 456. | The law of inertia                                |     |  |   |  |    | 482 |
| 457. | The second law of motion                          |     |  |   |  |    | 483 |
| 458. | The third law                                     |     |  |   |  | ۰. | 483 |
| 459. | Summary of Newtonian principles                   |     |  |   |  |    | 485 |
| 460. | Causality in dynamics                             |     |  |   |  |    | 486 |
| 461. | Accelerations as caused by particulars            |     |  |   |  |    | 487 |
| 462. | No part of the laws of motion is an à priori trut | th. |  |   |  |    | 488 |

#### CHAPTER LVIII.

#### ABSOLUTE AND RELATIVE MOTION.

| 463. | Newton and his critics .         |   |  |  |  |  |  | 489 |
|------|----------------------------------|---|--|--|--|--|--|-----|
| 464. | Grounds for absolute motion      |   |  |  |  |  |  | 490 |
| 465. | Neumann's theory                 |   |  |  |  |  |  | 490 |
| 466. | Streintz's theory .              | • |  |  |  |  |  | 491 |
| 467. | Mr Macaulay's theory             |   |  |  |  |  |  | 491 |
|      | Absolute rotation is still a cha |   |  |  |  |  |  |     |
| 469. | Mach's reply to Newton .         |   |  |  |  |  |  | 492 |

#### CHAPTER LIX.

#### HERTZ'S DYNAMICS.

| 470. | Summary of Hertz's system                           |  |       | . 494 | ŀ |
|------|---|--|-------|-------|---|
|      | Hertz's innovations are not fundamental from the po |  |       |       |   |
|      | mathematics   |  |       | . 495 | 5 |
| 472. | Principles common to Hertz and Newton               |  | <br>• | . 496 | 3 |
| 473. | Principle of the equality of cause and effect       |  |       | . 496 | 3 |
| 474. | Summary of the work                                 |  |       | . 497 | 1 |

## APPENDIX A.

|              | THE LOGICAL AND ARITHMETICAL DOCTRINES OF FREGE.                     | PAG  | Е  |
|--------------|--|------|----|
| 475.         | Principal points in Frege's doctrines                                | . 50 | )1 |
| 476.         | Meaning and indication   | . 50 | )2 |
| 477.         | Truth-values and judgment  | . 50 | )2 |
| 478.         | Criticism  | . 50 | )3 |
| 479.         | Are assumptions proper names for the true or the false?              | . 50 | )4 |
| 480.         | Functions  | . 50 | )5 |
| 481.         | Begriff and Gegenstand   | . 50 | )7 |
| 482.         | Recapitulation of theory of propositional functions                  | . 50 | )8 |
| 483.         | Can concepts be made logical subjects?                               | . 51 | .0 |
| 484.         | Ranges   | . 51 | .0 |
| 485.         | Definition of $\varepsilon$ and of <i>relation</i>                   | . 51 | 2  |
| <b>486</b> . | Reasons for an extensional view of classes                           | . 51 | 3  |
| 487.         | A class which has only one member is distinct from its only member . | . 51 | 3  |
| 488.         | Possible theories to account for this fact                           | . 51 | 4  |
| 489.         | Recapitulation of theories already discussed                         | . 51 | 5  |
| 490.         | The subject of a proposition may be plural                           | . 51 | .6 |
| 491.         | Classes having only one member                                       | . 51 | 7  |
| 492.         | Theory of types  | . 51 | 8  |
| 493.         | Implication and symbolic logic                                       | . 51 | 8  |
| 494.         | Definition of cardinal numbers                                       | . 51 | 9  |
| 495.         | Frege's theory of series   | . 52 | :0 |
| 496.         | Kerry's criticisms of Frege  | . 52 | :0 |

#### APPENDIX B.

#### THE DOCTRINE OF TYPES.
