Contents

PART I. METHODS	1
1. The Basic Method	3
1. The Probabilistic Method	3
2. Graph Theory	5
3. Combinatorics	8
4. Combinatorial Number Theory	10
5. Disjoint Pairs	11
The Probabilistic Lens: The Erdős–Ko–Rado Theorem	13
2. Linearity of Expectation	15
1. Basics	15
2. Splitting Graphs	16
3. Two Quickies	18
4. Balancing Vectors	19
5. Unbalancing Lights	20
6. Without Coin Flips	21
The Probabilistic Lens: Brégman’s Theorem	23
3. Alterations	27
1. Ramsey Numbers	27
2. Independent Sets	29
3. Combinatorial Geometry	30

4. Packing	31
5. Recoloring	32
The Probabilistic Lens: High Girth and High Chromatic Number	35
4. The Second Moment	37
1. Basics	37
2. Number Theory	38
3. More Basics	40
4. Random Graphs	41
5. Clique Number	45
6. Distinct Sums	47
The Probabilistic Lens: Hamiltonian Paths	49
5. The Local Lemma	53
1. The Lemma	53
2. Property B and Multicolored Sets of Real Numbers	56
3. Lower Bounds for Ramsey Numbers	57
4. A Geometric Result	59
5. The Linear Arboricity of Graphs	60
6. Latin Transversals	64
7. The Algorithmic Aspect	66
The Probabilistic Lens: Directed Cycles	69
6. Correlation Inequalities	71
1. The Four Functions Theorem of Ahlswede and Daykin	71
2. The FKG Inequality	74
3. Monotone Properties	76
4. Linear Extensions of Partially Ordered Sets	78
The Probabilistic Lens: Turán's Theorem	81

Contents	xi
7. Martingales	83
1. Definitions	83
2. Large Deviations	84
3. Chromatic Number	86
4. A General Setting	89
5. Three Illustrations	91
The Probabilistic Lens: Weierstrass Approximation Theorem	93
8. The Poisson Paradigm	95
1. The Janson Inequalities	95
2. The Proofs	97
3. Brun's Sieve	100
4. Large Deviations	102
5. Counting Extensions	104
6. Counting Representations	106
7. Further Inequalities	109
The Probabilistic Lens: Local Coloring	113
9. Pseudo-Randomness	115
1. The Quadratic Residue Tournaments	116
2. Eigenvalues and Expanders	119
3. Quasi-Random Graphs	125
4. The Rödl Nibble	132
The Probabilistic Lens: Random Walks	139
PART II. TOPICS	141
10. Random Graphs	143
1. Subgraphs	143
2. Clique Number	146
3. Chromatic Number	147

4. Branching Processes	149
5. The Giant Component	153
6. Inside the Phase Transition	156
7. Zero–One Laws	159
The Probabilistic Lens: Counting Subgraphs	167
11. Circuit Complexity	169
1. Preliminaries	169
2. Random Restrictions and Bounded-Depth Circuits	170
3. More on Bounded-Depth Circuits	174
4. Monotone Circuits	177
5. Formulae	181
The Probabilistic Lens: Maximal Antichains	183
12. Discrepancy	185
1. Basics	185
2. Six Standard Deviations Suffice	186
3. Linear and Hereditary Discrepancy	190
4. Lower Bounds	193
5. The Beck–Fiala Theorem	195
The Probabilistic Lens: Unbalancing Lights	197
13. Geometry	199
1. The Greatest Angle Among Points in Euclidean Spaces	199
2. Empty Triangles Determined by Points in the Plane	201
3. Geometrical Realizations of Sign Matrices	203
4. ϵ -Nets and VC-Dimensions of Range Spaces	205
The Probabilistic Lens: Efficient Packing	211

14. Codes and Games	213
1. Codes	213
2. An Easy Game	215
3. Balancing Vector Game	216
4. Nonadaptive Algorithms	218
The Probabilistic Lens: An Extremal Graph	221
15. Derandomization	223
1. The Method of Conditional Probabilities	223
2. d -Wise Independent Random Variables in Small Sample Spaces	228
Appendix A. Bounding of Large Deviations	233
Appendix B. Some Open Problems (by Paul Erdős)	241
References	245
Index	251
