## Part I General Overview

<b>1</b>	<b>Advances in Global and Local Helioseismology:</b>	
	<b>An Introductory Review . . . . .</b>	<b>3</b>
1.1	Introduction . . . . .	3
1.2	Brief History of Helioseismology . . . . .	5
1.3	Basic Properties of Solar Oscillations . . . . .	11
	1.3.1 Oscillation Power Spectrum . . . . .	11
	1.3.2 Excitation by Turbulent Convection . . . . .	13
	1.3.3 Line Asymmetry and Pseudo-modes . . . . .	14
	1.3.4 Magnetic Effects: Sunspot Oscillations and Acoustic Halos . . . . .	17
	1.3.5 Impulsive Excitation: Sunquakes. . . . .	20
1.4	Global Helioseismology. . . . .	23
	1.4.1 Basic Equations . . . . .	23
	1.4.2 JWKB Solution. . . . .	29
	1.4.3 Dispersion Relations for p- and g-modes . . . . .	31
	1.4.4 Frequencies of p- and g-modes. . . . .	32
	1.4.5 Asymptotic Ray-path Approximation. . . . .	34
	1.4.6 Duvall's Law . . . . .	37
	1.4.7 Asymptotic Sound-Speed Inversion. . . . .	37
	1.4.8 Surface Gravity Waves (f-mode). . . . .	41
	1.4.9 The Seismic Radius. . . . .	42
1.5	General Helioseismic Inverse Problem . . . . .	44
	1.5.1 Variational Principle . . . . .	45
	1.5.2 Perturbation Theory. . . . .	45
	1.5.3 Kernel Transformations . . . . .	46
	1.5.4 Solution of Inverse Problem. . . . .	48
	1.5.5 Optimally Localized Averages Method . . . . .	49
	1.5.6 Inversion Results for Solar Structure . . . . .	50

1.5.7	Regularized Least-Squares Method . . . . .	53
1.5.8	Inversions for Solar Rotation . . . . .	54
1.5.9	Results for Solar Rotation . . . . .	55
1.6	Local-area Helioseismology . . . . .	58
1.6.1	Basic Principles . . . . .	58
1.6.2	Ring-diagram Analysis . . . . .	58
1.6.3	Time–Distance Helioseismology (Solar Tomography) . . . . .	60
1.6.4	Acoustic Holography and Imaging . . . . .	60
1.7	Solar Tomography . . . . .	61
1.7.1	Time–distance Diagram . . . . .	64
1.7.2	Wave Travel Times . . . . .	64
1.7.3	Deep- and Surface-Focus Measurement Schemes . . . . .	67
1.7.4	Sensitivity Kernels: Ray-path Approximation . . . . .	67
1.7.5	Born Approximation . . . . .	70
1.8	Inversion Results of Solar Acoustic Tomography . . . . .	71
1.8.1	Diagnostics of Supergranulation . . . . .	72
1.8.2	Structure and Dynamics of Sunspot . . . . .	72
1.8.3	Large-Scale and Meridional Flows . . . . .	74
1.9	Conclusion and Outlook . . . . .	75
1.9.1	Global Helioseismology: Diagnostics of Global Changes Inside the Sun . . . . .	79
1.9.2	Local-Area Helioseismology: 3D Imaging of the Solar Interior . . . . .	79
	References . . . . .	80

## Part II Section 1: The Sun as a Star

<b>2</b>	<b>The Quiet Solar Photosphere: Dynamics and Magnetism . . . . .</b>	<b>87</b>
2.1	Introduction . . . . .	88
2.2	Solar Surface Flows . . . . .	88
2.2.1	The Solar Granulation . . . . .	88
2.2.2	The Solar Mesogranulation . . . . .	90
2.2.3	The Solar Supergranulation . . . . .	91
2.2.4	The Power Spectrum of Photospheric Flows . . . . .	93
2.2.5	Numerical Simulation of the Solar Convection; Origin of the Granulation . . . . .	93
2.2.6	Origin of the Solar Mesogranulation . . . . .	96
2.2.7	Origin of the Solar Supergranulation . . . . .	98
2.3	Magnetic Field in the Quiet Photosphere . . . . .	99
2.3.1	Introduction . . . . .	99
2.3.2	The Photospheric Network . . . . .	101

- 2.3.3 Observation of the Photospheric Network  
in the G-Band at 4,305 Å. . . . . 105
- 2.3.4 Intranetwork Magnetic Field. . . . . 106
- 2.3.5 Horizontal Component of the Intranetwork  
Magnetic Field and Granular Magnetic Field . . . . . 108
- 2.3.6 Physical Properties of the Intranetwork Magnetic  
Field and Comparison with the Properties of the  
Network Field . . . . . 109
- 2.3.7 Hidden Turbulent Flux . . . . . 111
- 2.3.8 Numerical Simulations of Small-Scale  
Magneto-Convection . . . . . 111
- 2.3.9 Small-Scale Dynamo: A Possible Origin of the  
Small-Scale Magnetic Field . . . . . 114
- 2.3.10 Origin of the Photospheric Network . . . . . 115
- 2.3.11 Conclusion . . . . . 116
- References . . . . . 117

**3 Modeling and Prediction of Solar Cycles Using Data**

- Assimilation Methods** . . . . . 121
- 3.1 Introduction . . . . . 121
- 3.2 Formulation of the Dynamo Models . . . . . 122
  - 3.2.1 Parker’s Migratory Dynamo . . . . . 122
  - 3.2.2 The Kleeorin–Ruzmaikin Model . . . . . 123
  - 3.2.3 Periodic and Chaotic Solutions . . . . . 126
- 3.3 Data Assimilation Methods . . . . . 129
  - 3.3.1 Basic Formulation . . . . . 129
  - 3.3.2 Implementation of the Data Assimilation  
Method . . . . . 130
- 3.4 Reproducing and Predicting Observational Data by  
the Ensemble Kalman Filter. . . . . 131
  - 3.4.1 Application Data Assimilation to Early  
Sunspot Data . . . . . 132
  - 3.4.2 Prediction of the Last Solar Cycles . . . . . 133
- 3.5 Discussion and Conclusions . . . . . 135
- References . . . . . 136

**4 Amplitudes of Solar Gravity Modes** . . . . . 139

- 4.1 Motivations . . . . . 139
- 4.2 Basic Properties of Solar Gravity Modes . . . . . 140
  - 4.2.1 Dispersion Relation of Gravito-Acoustic Modes . . . . . 140
  - 4.2.2 Some g Mode Properties Near the Sun Surface . . . . . 142
- 4.3 Energetic of Gravity Modes: Driving and  
Damping Processes . . . . . 144
  - 4.3.1 Principle: Forced and Damped Oscillator . . . . . 144

- 4.3.2 Driving Mechanisms . . . . . 145
- 4.3.3 Sources of Damping ( $\eta$ ). . . . . 147
- 4.4 Theoretical Estimates on g Mode Amplitudes . . . . . 151
  - 4.4.1 Computation Based on the Equipartition Assumption . . . . . 152
  - 4.4.2 Full Computation of Mode Driving and Damping . . . . . 153
  - 4.4.3 The Special Case of Asymptotic g Modes . . . . . 154
  - 4.4.4 Discussion . . . . . 155
- 4.5 Penetrative Convection . . . . . 156
- 4.6 Concluding Remarks . . . . . 157
- References . . . . . 158

**5 Unveiling Stellar Cores and Multipole Moments**

- via their Flattening.** . . . . . 161
- 5.1 Relating Rotation and Measured Flattening . . . . . 162
- 5.2 Measurements of the Flattening of the Sun and Stars . . . . . 163
  - 5.2.1 Flattening of the Sun. . . . . 163
  - 5.2.2 Flattening of Stars. . . . . 164
- 5.3 Different Models of Uniformly Rotating Body . . . . . 164
  - 5.3.1 Model for Centrally Condensed Body . . . . . 165
  - 5.3.2 Model for a Body of Constant Density . . . . . 168
  - 5.3.3 The Generalized Roche Model: Stars with a Convective Zone and Massless Envelope. . . . . 168
  - 5.3.4 Polytropic Model of Unit Index  $n$ . . . . . 169
- 5.4 Introducing Differential Rotation . . . . . 170
  - 5.4.1 Solar Case . . . . . 170
  - 5.4.2 Differential Rotation on Stars. . . . . 172
- 5.5 Moments of Inertia . . . . . 173
- 5.6 Conclusion. . . . . 175
- 5.7 Computations for the Solar Case . . . . . 177
  - 5.7.1 Results. . . . . 177
- References . . . . . 180

**Part III From Heliosismology to Asterosismology**

**6 From Helioseismology to Asteroseismology:**

- Some Recent Developments.** . . . . . 185
- 6.1 Introduction . . . . . 185
- 6.2 Basics of Stellar Oscillations . . . . . 186
  - 6.2.1 Some Hydrohydrodynamics . . . . . 187
  - 6.2.2 Linear Perturbations . . . . . 188

6.2.3	Separation of Variables . . . . .	188
6.2.4	Non-radial Adiabatic Oscillations . . . . .	190
6.3	The Asymptotic Theory and Deviations from it . . . . .	191
6.3.1	The Asymptotic Theory . . . . .	192
6.3.2	Deviations from the Asymptotic Theory . . . . .	193
6.3.3	Second Differences . . . . .	193
6.4	Two Examples of Seismic Analyses for Main Sequence Stars . . . . .	195
6.4.1	The Star $\iota$ Hor . . . . .	196
6.4.2	The Star $\mu$ Arae . . . . .	197
6.5	Conclusions . . . . .	199
	References . . . . .	199

**Part IV Section 2: Stellar Pulsations**

<b>7</b>	<b>Issues Relating to Observables of Rapidly Rotating Stars . . . . .</b>	<b>203</b>
7.1	Introduction . . . . .	203
7.2	Modelling Tools . . . . .	205
7.3	Results from Rotating Stellar Models . . . . .	208
7.3.1	Structural Results . . . . .	208
7.3.2	SEDs . . . . .	210
7.3.3	Line Profiles . . . . .	213
7.3.4	Pulsation Frequencies . . . . .	216
7.4	Final Comments . . . . .	218
	References . . . . .	219
<b>8</b>	<b>Seismic Diagnostics for Rotating Massive Main Sequence Stars . . . . .</b>	<b>223</b>
8.1	Introduction . . . . .	223
8.2	Massive Main Sequence Stars . . . . .	224
8.2.1	$\beta$ Cephei Stars . . . . .	225
8.3	Theoretical Framework . . . . .	228
8.3.1	No Rotation . . . . .	228
8.3.2	Including Rotation . . . . .	230
8.3.3	Rotational Splittings . . . . .	230
8.3.4	Splitting Asymmetries: Distortion . . . . .	232
8.3.5	Axisymmetric Modes: Rotationally Induced Mixing . . . . .	235
8.4	Seismic Analyses of Four $\beta$ Cephei Stars . . . . .	237
8.4.1	Rotational Splittings . . . . .	238
8.4.2	Splitting Asymmetries: Distortion . . . . .	240
8.4.3	Axisymmetric Modes: Mixing . . . . .	242

8.5	Cubic Order Versus Latitudinal Dependence . . . . .	245
8.5.1	Latitudinal Dependence . . . . .	247
8.5.2	Latitudinal Dependence Versus Cubic Order Effects . . . . .	249
8.6	Conclusions . . . . .	251
8.7	Appendix: Differential Rotation . . . . .	251
	References . . . . .	256
<b>9</b>	<b>Asymptotic Theory of Stellar Oscillations Based on Ray Dynamics . . . . .</b>	<b>259</b>
9.1	Introduction . . . . .	259
9.2	Wave Equations and Ray Models . . . . .	261
9.3	Regular Versus Irregular Energy Level Spectra in Quantum Systems . . . . .	266
9.3.1	Regular Spectrum . . . . .	266
9.3.2	Irregular Spectrum . . . . .	267
9.4	Application to the Asymptotic Theory of Acoustic Modes in Rapidly Rotating Stars . . . . .	270
9.5	Conclusions . . . . .	273
	References . . . . .	274
<b>10</b>	<b>Angular Momentum Transport by Regular Gravito-Inertial Waves in Stellar Radiation Zones . . . . .</b>	<b>275</b>
10.1	Context and Motivation . . . . .	275
10.2	Structure of Low-Frequency Waves Influenced by the Coriolis Acceleration . . . . .	277
10.2.1	Dynamical Equations . . . . .	278
10.2.2	Main Assumptions . . . . .	280
10.2.3	Wave Pressure and Velocity Fields . . . . .	282
10.2.4	The Traditional Approximation in the Case of a General Differential Rotation . . . . .	285
10.3	Transport of Angular Momentum . . . . .	285
10.3.1	Action of Angular Momentum . . . . .	285
10.3.2	Transport of Angular Momentum by the Waves: The Shear Layer Oscillation and Secular Effects . . . . .	287
10.4	The Weak Differential Rotation Case . . . . .	289
10.4.1	Definitions . . . . .	289
10.4.2	Wave Pressure and Velocity Fields . . . . .	290
10.4.3	Angular Momentum Transport in the “Weak Differential Rotation” Case . . . . .	296
10.5	On the Track of the Excited Spectrum . . . . .	299
10.6	Conclusion . . . . .	300
	References . . . . .	301

<b>11</b>	<b>Stochastic Excitation of Acoustic Modes in Stars</b> . . . . .	305
11.1	Introduction . . . . .	305
11.2	Mode Energy . . . . .	307
11.3	Seismic Constraints . . . . .	308
	11.3.1 Solar Seismic Constraints. . . . .	310
	11.3.2 Stellar Seismic Constraints. . . . .	310
11.4	Theoretical Models . . . . .	312
	11.4.1 The Inhomogeneous Wave Equation . . . . .	312
	11.4.2 General Solution . . . . .	314
	11.4.3 Driving Sources . . . . .	315
	11.4.4 Length Scale Separation . . . . .	316
	11.4.5 Closure Models. . . . .	316
	11.4.6 Adopted Model of Turbulence . . . . .	317
	11.4.7 Complete Formulation . . . . .	317
11.5	Turbulent Spectrum. . . . .	320
	11.5.1 Time Averaged Spectrum, $E(k)$ . . . . .	320
	11.5.2 Eddy Time-Correlation, $\chi_k(\omega)$ . . . . .	321
11.6	Closure Models and Anisotropy . . . . .	324
11.7	Importance of the Stellar Stratification and Chemical Composition . . . . .	327
	11.7.1 Role of the Turbulent Pressure . . . . .	327
	11.7.2 Role of the Surface Metal Abundance . . . . .	328
11.8	Contribution of the Entropy Fluctuations . . . . .	330
11.9	Alternative Approaches . . . . .	330
	11.9.1 Energy Equipartition . . . . .	330
	11.9.2 “Direct” Calculation . . . . .	332
11.10	Stochastic Excitation Across the HR Diagram . . . . .	333
	11.10.1 Mode Excitation Rates. . . . .	333
	11.10.2 Mode Surface Velocity . . . . .	335
