#### ABSTRACT

ERIC

Problems in the reading and study skills of students in City University of New York (CUNY) community colleges are the subject of this report. Questionnaires asking for information on factors related to these problems were completed by 496 CUNY students. Results indicate that, among other things: (1) there is a high correlation between reading and study problems and physical, psychological, intellectual, and environmental factors such as physical fatigue, ability to concentrate on and understand assignments, worry about grades and reading ability, lack of encouragement to read by friends and parents, a distracting home environment, and lack of interest in teaching reading at the high school level; and, (2) most reading and studying problems involve comprehension, study, critical reading, and vocabulary skills. Questionnaires were also sent to the individuals in charge of reading or basic study programs at the participating community colleges. Responses indicate that while three of six participating colleges have reading and study programs, they also have space, material, or academic support problems. (JO)

whose interest and support made it possible for me to proceed

The education of our people is a national investment. It yields tangible returns in economic growth, an improved citizenry and higher standards of living. But even more importantly, free men and women value education as a personal experience and opportunity - as a basic benefit of a free and democratic civilization. It is our responsibility to do whatever needs to be done to make this opportunity available to all and to make it of the highest possible quality.

John F. Kennedy

Special message to the Congress on education

February 6, 1962

#### FOREWORD

At a time when The City University of New York is going through a period of educational self-examination, it becomes evident that this study should have been financed and implemented five years ago. It explores an area of research that has been neglected despite the persistent evidence that knowledge and expertise in reading problems were to become critical needs in urban higher education. The desires of the social reformers have outdistanced the skills and techniques for teaching reading to a generation of educationally disadvantaged students who have been promised a higher education in The City University of New York.

This study makes evident the incipient problem in the University's desire to increase the expectations of these students without providing in full the necessary facilities, personnel, and expert instructors to develop the skills necessary for the fulfillment of these expectations. These students require experienced personnel and tried and true methods which would preclude the further compounding of their educational frustrations.

Professor Bossone adds a unique dimension to the study of reading problems: he has asked the students what they believe to be their problems and the sources of their problems. This phenomenological approach has rarely been used in this area of reading research. Usually in the past the nature of reading problems was noted by the investigator without a detailed analysis of the perception of the subjects involved. Now at last we have more attention being paid to the students' concerns.

Open admissions will force us in CUNY to reevaluate our teaching methods and technology in the freshman and sophomore years, and this is as it should be. In the past the burden of change has always been placed on the educationally disadvantaged student and his success or failure was attributed to his inherent strengths and weaknesses. Now the instructor is being given the burden. He, too, has to change to meet new demands. Professor Ianni, formerly of the U.S. Office of Education, has indicated that it takes thirty years for an educational idea to be implemented within the classroom. We do not have the time. It behooves us, therefore, to note Professor Bossone's findings and to give serious consideration to his recommendations if we expect to meet the goals set forth for the Open Admissions Program.

#### ACKNOWLEDGEMENTS

Many people have offered assistance to the writer in his completion of this study; the following people, however, are due special thanks:

Dean Angelo Dispenzieri, Baruch College, who has always encouraged my interest in the community college, for he knows that the academic problems of the community college are rapidly becoming those of the senior college.

Dean Candido de Leon, Hostos Community College, who gave the financial assistance needed to produce this report.

Dr. Paul Panes, Mrs. Pearl Gasarch, Miss Ruth Liberman, Mrs. Earla Jost, Miss Jane Tannow, Mr. Alexander Simon, Miss Sandra Motz, Mr. Max Spalter, Mr. Steven Zuckerman, and Mr. Penis Sivack, teachers in the community colleges, who helped to administer the questionnaires.

Mr. Stan Levine and Mr. Alan Kahn, Syntactics Inc., who gave invaluable aid in analyzing and tabulating the data.

Dr. Seymour Giniger, Miss Maria Lepani, Mrs. Jean Policastro, and Miss Arlette Elkaim, City University Research and Evaluation Unit, who helped in preparing and typing the manuscript.

Dr. Blanche Serwer, Boston University, and staff members of the community colleges (too numerous to mention here - see Appendix A) who offered critical comments regarding the questionnaire.

And above all, the students who participated in this study and who also provided the challenge.

#### THE READING-STUDY SKILLS PROBLEMS OF STUDENTS IN COMMUNITY COLLEGES OF THE CITY UNIVERSITY OF NEW YORK

#### PART I

#### INTRODUCTION

With its commitment to open admissions The City University of New York has made clear to the nation that a four-year college education is definitely available to all high school graduates in New York City who seek it and that American higher education will reach its apogee of service in large urban centers. Such a noble commitment, however, also makes clear that colleges will have to bear the major responsibility for finding ways of helping the significant number of weaker students succeed because open admissions has validity only if these students are able to achieve their educational objectives.

The City University Task Force on Open Admissions has estimated that 25 to 45 percent of entering freshmen classes in 1970 will require some measure of remedial work. This is a significant number of students, then, who must be helped properly if The City University is to protect its investment in people or human capital, the most valuable of all capital.

- 1 -

Because a large number of these students are below grade in reading, because these students will face a more difficult reading task as their education moves in the direction of learning from books rather than learning from teachers, and because reading is the key tool that eventually affects proficiency in all academic learning, it becomes imperative that all community and senior colleges give more attention to improving the reading-study skills of their students.

#### The Problem

Unfortunately today, as in the past, many college educators still deny the fact that colleges have a responsibility for teaching reading-study skills to entering freshmen. They still believe this is an exclusive function of the high school. Perhaps this is because they do not understand that a good education requires a sequential development of a student's reading ability. As a student progresses through the grades, he is required to deal with increasing amounts of information on his own and obviously he needs highly refined reading-study skills to meet these requirements. Philip Shaw states in his review of research pertaining to college reading that a majority of

- 2 -

entering freshmen lack the reading-study skills requisite for academic success.<sup>1</sup>

Part of the problem is that the average college teacher is woefully lacking information about the reading-study skills problems of his students; and, as a result, he fails to give his students the appropriate guidance in chills they so desperately need. At best these teachers simply know that the students have been classified as remedial or not by some placement procedure which is generally inadequate and used mainly as an expedient measure for coping with vast numbers of entering freshmen. Obviously, they need to know a great deal more if they are going to formulate instruction which will be both effective and efficient, and, obviously, they need to make a diagnosis of the students' abilities and deficiencies. Aside from gathering information about students from a formal or standardized test used to measure previous performance in two or more separate reading skills and from

ERIC

- 3 -

<sup>&</sup>lt;sup>1</sup>Philip Shaw, "Reading and Other Academic Improvement Services," <u>The Counseling of College Students</u> (New York: The Free Press, 1968), pp. 358-359.

an informal classroom diagnosis via questions and teachermade tests, an instructor needs to know a great deal more about his students' reading-study skills and attitudes; more specifically he needs to obtain more information about his students' self-evaluations of reading-study skills needs or problems, and how they might be met - if he is to move them ahead as quickly and successfully as possible. With the desire to help obtain such information, the investigator undertook this study.

#### **Objectives**

The major objectives of this study were as follows:

- 1. To obtain background information about studentz enrolled in English and reading classes in the six community colleges of The City University of New York.
- 2. To note what their vocational and scholastic goals are.
- 3. To note what their extra-curricular activities and interests are.
- 4. To analyze factors which may contribute to readingstudy skills problems.
- 5. To determine what major problems in reading-study skills students believe they have.
- 6. To determine correlations between reading-study skills problems and factors reasonably assumed to be influential.

- 4 -

7. To analyze the reading programs, if any, in the community colleges of The City University which may be attempting to resolve these problems.

.

8. To make recommendations for the improvement of the teaching of reading-study skills in college.

#### The Procedure

To obtain data needed to accomplish the first six objectives, the investigator prepared a questionnaire which was examined by eighteen faculty members who were either teaching reading or English in six community colleges of The City University of New York. Noting their comments, the investigator revised the questionnaire and gave it to individual faculty members who were interested in administering it to students in their respective English and reading classes. In order to insure an adequate sample of students, the investigator had instructors administer it to students in regular freshman English classes, remedial English classes, reading classes, and evening English classes. The total number of students involved was 496. Participating community colleges were Borough of Manhattan Community College, Kingsborough Community College, New York City Community College, Staten Island Community College, Queensborough Community College, and Bronx Community College. For more specific information about numbers of students involved at each college, see Table 1.

- 5 -

To obtain information regarding the seventh objective, the nature of reading programs now in existence, the investigator asked the chairman, or person in charge of the reading program, to respond to an outline (see Appendix D) which would briefly describe the present reading program of the college. Three colleges submitted a description; three colleges have no program but are planning to develop one.

In order to process the questionnaire the following steps were taken: generating coding forms, coding the information from the questionnaires into these coding forms, keypunching, tabulating and cross-tabulating the data, and examining the output for statistically interesting results. It should be noted that certain questions involved special handling. For more specific information see "Notes on Processing the Questionnaire" in Appendix C.

Further, it must be understood that the investigator was not examining reading-study skills problems per se but rather the students' subjective feelings about these problems. The implicit assumption is that these would correlate highly with the performance level of reading-study skills. And, further, while it may appear that a student's answers to questions on reading-study skills problems may be measuring simply the

- 6 -

respondent's self-image as well as his answers to "affecting items," (in which case one may be correlating self-image with self-image and getting the highly correlated results pictured in the graphs), one,nevertheless, does obtain measures of the problems a student feels he has and this gives educators definite clues as to the most significant reading-study skills problems of which they must be cognizant if they are to make instruction more meaningful and worthwhile for the students.

#### PART II

#### THE COMMUNITY COLLEGE STUDENTS OF THE CITY UNIVERSITY OF NEW YORK

# Note: For further explanation of the following topics and statistics see Appendix C.

#### BACKGROUND INFORMATION

ERIC

#### Age, sex, marital status, and citizenship

This study was concerned with 208 male students, 280 female students, and 8 students who did not indicate their sex. The total number of students was 496. Of these students, the majority (65.3 percent) were eighteen or nineteen years old; also the majority of these students, 412 (83.1 percent), were single, 70 (14.1 percent) were married and 14 (2.8 percent) did not respond. Most of these students, 446 (89.9 percent), were U.S. citizens, 41 (8.3 percent) were not, and 9 (1.8 percent) did not respond; however, only 21 (4.2 percent) were classified as foreign students.

#### Schooling and socio-economic background

Of these students 475 (95.8 percent) indicated they were high school graduates and 2 (.4 percent) indicated they were not; 19 (3.8 percent) did not respond. The majority of these

- 8 -

students (44.8 percent) held an Academic Diploma and the other students held other types of diplomas in this order of frequency: General (25.8 percent), Commercial (14.9 percent), Vocational (7.7 percent), Technical (3.0 percent), Equivalency (1.8 percent). Languages other than English spoken in their homes are in this order of frequency: Spanish (15.7 percent), Italian (8.5 percent), French (2.6 percent), German (2.2 percent), other languages (11.7 percent). The majority of these students indicated their fathers' occupations were in the Blue Collar category, (41.3 percent); other students indicated their fathers' occupations were in The White Collar category (19.6 percent), Professional or Business category (8.7 percent), or Other (14.3 percent). For further explanation of these categories, see Appendix C. Approximately onethird of these students (32.2 percent) indicated that their mothers worked.

#### Goals

In regard to vocational goals, the fields that interested the students were Medical (18.1 percent), Business (17.3 percent), Teaching (14.5 percent), Secretarial (10.9 percent), and Technology (10.7 percent). For further explanation, see Appendix C. The main reason that the majority of students (69.2 percent) chose a specific vocation is "personal satisfaction."

In regard to scholastic goals, a little more than one third (37.3 percent) were seeking terminal degrees (A.S. or A.A.), approximately one third (29.4 percent) were interested in a four-year college degree (B.A. or B.S.), and the others who responded (23.3 percent) were interested in pursuing a graduate degree (M.A., M.S., Ed.D.or Ph. D.).

## EXTRACURRICULAR ACTIVITIES AND INTERESTS

#### Outside work

The majority of these students (92.3 percent) have worked full or part time in the past and slightly over half of them (51.3 percent) were working full or part time at present; only 12.1 percent feel their outside work is course-related. Their main reasons for working appeared to be self-support, (19.4 percent), have spending money (16.1 percent), and pay school expenses (10.1 percent).

## Extracurricular activities

Extracurricular activities which appeared to be of greatest interest to these students were watching TV (46.8 percent), reading (41. percent), listening to radio (33.6 percent) and watching movies (33.2 percent).

#### Subjects enjoyed most

In response to question, "What subjects do you enjoy most?" these students stated as their primary choices the following: English (22.6 percent), Math (16.1 percent), Social Science (12.5 percent), Science (11.5 percent), Technical (9.1 percent), Art (3.8 percent), Music (3.8 percent), and Foreign Languages (3.6 percent).

- 15 -

## Preferences in keading

The majority of these students preferred to read novels (68.3 percent), short stories (65.3 percent), magazine articles (59.5 percent), newspaper articles (56.7 percent), and the news (54.8 percent). Less than half preferred the following in this order of frequency: mysteries (46.2 percent), biographies (41.3 percent), plays (37.7 percent), poetry (34.5 percent) essays (24.4 percent), literary classics (22.4 percent), technical subjects (32.4 percent), sports writers (21 percent), and comic books (13.7 percent).

# Time Spent in Reading and Studying

In response to the question, "How much do you read (outside of school work)?" 211 students (42.5 percent) stated they read occasionally; 106 (21.4 percent), much of the time; 77 (15.5 percent), always reading; 74 (14.9 percent), seldom from lack of opportunity; 22 (4.4 percent), hardly at all from choice; and 6 (1.2 percent) did not respond.

In response to question, "How much time do you spend in serious study for school subjects?" 241 students (48.6 percent) indicated a lot; 98 (19.8 percent) indicated very little, 89 (17.9 percent) indicated most of the time, 59 (11.9 percent) indicated once in a while, and 1 (1.2 percent) did not respond.

#### Environmental

The majority of these students (82.5 percent) indicated one or more negative factors relating to environment. Of this number, the majority (65.9 percent) indicated 1 to 3 The most common factors were having friends and factors. acquaintances who do not or only somewhat encourage reading (71.4 percent), having parents who are not or only somewhat interested in reading (67 percent), having high school teachers who were not or only somewhat interested in teaching reading skills (66.1 percent), and living in a home situation which does not or only somewhat stimulates an interest in reading<sup>.</sup> (62.7 percent). Interestingly enough, and in spite of the above negative factors, these students indicated they like (to some degree) to read (91.9 percent) and approximately a third of them (30.3 percent) read much outside of schoolwork.

### PROBLEMS IN READING AND STUDYING

### Following Directions

Approximately one third (32.9 percent) had some difficulty in following directions and approximately one third (31.7 percent) had more difficulty with spoken directions than written directions. Of these students a majority (75.6 percent) believed that teachers, when making assignments, should give written as well as spoken directions some of the time, if not all of the time.

#### Vocabulary

ERIC

The majority of these students (56.1 percent) did not believe with certainty that they had a good general vocabulary, and 47.5 percent did not believe with certainty that their vocabulary was adequate for a thorough understanding of different subjects now being studied.

Many of these students (61.3 percent) frequently found unfamiliar words in their reading and a good percentage lacked word perception skills, such as context clues, structural analysis, and, to some degree, use of the dictionary.

#### Comprehension-Study Skills

A significant number of these students (49.4 percent) had little or no training in how to read textbooks. A majority (83.1 percent), however, professed to know the purpose of the various parts of the book. Only half of these students (50.6 percent) had learned with a sense of assurance the skill of skimming and a lesser number (46.2 percent) were certain that when they read they had a well-defined purpose.

A significant number of these students (over one third) felt uncertain about comprehension skills, such as finding the main idea of the paragraph, knowing how to read for details, and seeing relationships between ideas

A significant number of these students (over one third) felt uncertain about study skills, such as taking notes and outlining and summarizing what is read.

A significant number of these students (approximately one third or more) had difficulty in coping with information, such as reading tables, charts, etc; locating information in the library; and organizing information,

A majority of these students (51.5 percent) were not certain about the application of what they read to solving problems; a majority (56.2 percent) were not certain about the use of various rates of speed in reading according to the purpose and nature of materials read; and a majority (55 percent) had misgivings about remembering what they read.

### Critical Reading

The majority of these students (55.1 percent) did not feel certain about appraising the author's qualification to write on a subject and a majority (58.3 percent) were not certain they knew what the author's purpose was in writing.

A significant number (62.5 percent), however, believed with certainty that they could differentiate between fact and opinion. A lesser number (52 percent) believed with certainty that they could distinguish between words used in a more informative than emotional way; a lesser number (48.2 percent) believed with certainty that they could identify specific propaganda techniques; a lesser number (45 percent) believed with certainty that they questioned the accuracy of statements they read; and a considerably lesser number (25.8 percent) believed with certainty that they know how to evaluate critically the writer's ideas and logic.

# CORRELATIONS BETWEEN CERTAIN FACTORS

#### AND READING-STUDY SKILLS

PROBLEMS

#### Guide to Reading Figures

First, a brief statement sets forth the most salient findings which resulted from an analysis of the answers to this particular item or question. Second, is the item or question.

The key above each bar graph indicates the response category to each item or question as well as the total number of those responses. Thus in Figure 1, 339 respondents had less than two physical problems and 147 respondents had two or more physical problems. Of the 339, 26% or 90 respondents indicated some difficulty following directions.

Each Figure consists of four bar graphs. Thus, in Figure 1 the first graph indicates that 26% of those students with less than 2 physical problems have some difficulty following directions, whereas 48% with two or more physical problems have difficulty following directions.

The Figures were designed to present the findings in the simplest way. To this end, groups were combined, e.g., students who answered "yes" were grouped with those who answered "some," or students with 0 or 1 physical problem were put in one group and those with 2 to 7 physical problems were put in another group.

### PART IV

### COMMUNITY COLLEGE READING PROGRAMS

Persons in charge of reading or basic study skills programs at the six community colleges cited in this study were asked to describe their programs in accordance with the outline noted in Appendix D. Three colleges had no formal reading or study skills program in the fall of 1969 when this study was undertaken. Three did, namely, Borough of Manhatwan Community College, New York City Community College, and Queensborough Community College. The descriptions were made by the people whose names appear at the end of each statement.

- 68 -

## READING PROGRAM AT BOROUGH OF MANHATTAN COMMUNITY COLLEGE

### I. Staff:

- A. Two people are currently teaching reading
- B. Their training is as follows:
  - 1. Miss Motz--has approximately sixty credits in reading and related courses: NYU and Yeshiva University. This teacher is now attending Columbia in order to register in a Ph.D. program. She also has an M.A. degree and the Sixth Year Certificate, in addition to ten years teaching in the junior and senior high school and ten years teaching in college. She worked at Hunter College as Research Associate in Project English: gathering materials (reading) for the socially disadvantaged.
  - 2. Mrs Holden--has an M.A. degree, and is now enrolled in a Ph.D. program in reading at NYU. She has nine credits in reading, seven years experience teaching reading, and was in the in-service training program in reading at Garercy Hill Institute.
- II. Other Personnel: Other departments and counselors are free to recommend students to the reading laboratory

## III. Students:

ERIC

- A. There are 2,500 day students and 2,500 night students.
- B. Approximately 170 students attend the lab. each semester.
- C. The average number of students enrolled in each class is 20.
- D. Students' greatest problem seems to be comprehension--and speed, or the lack of speed. Their general level of performance according to tests is grade 10.

# IV. Standardized Tests Used and Placement:

- A. <u>The Nelson-Denny Reading Test</u>, <u>High School and College</u>, is used for general placement.
- B. At present the Gray Oral is used as a follow-up.
   Note: We are seriously considering another test to replace the <u>Gray Oral</u>.

- 69 -

## V. Instruction:

- A. The course is designed to be remedial and developmental.
- B. The reading lab. is neither required, nor is it an elective.
- C. No credit is given.
- D. Major Objective: To provide a reading program for students that will give them the necessary word attack, vocabulary, and comprehension skills to enable them to read successfully the text books and other materials they will meet in their continuing education.
- E. The following skills are stressed: Word attack, comprehension, study, dictionary, skimming and scanning. In addition, stress is placed on reading maps and graphs, reference and texts, consonants, vowels, word structure, sight vocabulary, word meaning, context inference, symbolic discrimination, details, main ideas, sequence relationship, following directions, sentence structure, and the reading of fiction.
- F. Books, materials, and equipment utilized are as follows:
  - 1. Be a Better Reader Series--Smith
  - 2. <u>Power and Speed in Reading--Gilbert</u>
  - 3. SRA Labs. 111 and IV
  - 4. SRA Reading for Understanding
  - 5. SRA Pilot Library
  - 6. SRA College Reading Program 1
  - 7. SRA Dimensions in Reading
  - 8. SRA Advanced Reading Skills Program
  - 9. Harvard Classics
  - 10. Perceptoscope--along with PDL <u>Reading Improvement</u> Program
  - 11. Selected prose
  - 12. Classroom library
  - 13. Teacher-prepared materials
  - 14. Accelerators
  - 15. Dictionaries
  - 17. Prepared lectures
- G. Evaluative procedures are: Multi-level materials, grades, student maintained charts, informal testing, teacher prepared tests, standardized testing.

## VI. Summary Statement:

1

ERIC

The positive features of the program have been listed. It is my belief that the course should be compulsory and that credit should be given. The physical space is entirely too small. In addition, there should be no more than twelve to fifteen students enrolled in each class or section.

> Submitted by Miss Sandra Motz Reading Instructor

QUEENSBOROUGH COMMUNITY CCLLEGE THE CITY UNIVERSITY OF NEW YORK

Reading Program at Queensborough Community College

- I. Staff: Fifteen Eight have master degrees or better in the field of reading improvement instruction.
- II. Other Personnel: Cooperation with the English department and with counselors in Student Personnel.
- III. Students: 8,000 enrolled in college
  500 enrolled in reading program
  12 enrolled in a reading class

According to testing, reading instruction levels range from 7th grade to approximately 10th grade.

- IV. Tests Used and Placement Procedures: Incoming students receive English Cooperative Test to determine general strength and weakness of reading and writing abilities. California Reading Test is administered as a second test to diagnose specific reading disabilities.
- Instruction: Our courses are designed for college level students v. functioning on approximately a 7th through 10th grade reading level. Instruction is offered in a self-contained classroom situation, supplemented by reading laboratory work. Our courses are prerequisite or requisite for the Basic English courses. No credit is given for remedial Purpose of our reading course is to improve courses. the students vocabulary, reading comprehension and interpretation and study skills abilities, as well as rate reading. We employ various types of skills texts and content textbooks on different instructional levels. For our stronger readers, we also employ the SRA Accelerator and EDL Controlled Reader. Evaluation of student's progress is made mainly on informal observation, as well as a final standardized test. (no printed syllabus available)

- 72 -

- VI. Positive features of our program; small classes, homogeneously grouped; well-trained and experienced instructors.
  - Negative features of our program; grouped classes meet three hours a week. It would be desirable to make the program more intensive; we would consider the course more motivating if credit were granted; we desire more text materials, and more reading laboratories.

	in Reading, NYU, Two
	semesters as evening in-
	structor in Reading

### 2. Other Personnel

Ruth Lemansky - College Science Technician B.S. in Antioch College - Elementary Education Will complete MA in Reading at NYU August 1970

Secretary - Lillian Pace Experienced and well trained in the procedure of our developmental and individualized program. Efficient in office and inter office communications.

## 3. <u>Students</u>

The number enrolled in the college - round figures, 4,000 The number enrolled in the Reading Program - 384 per semester The average enrolled in a reading class - 15 Besides those deficient in reading, we enroll volunteers, faculty referrals, and staff.

4. <u>Standardized Tests Used and Placement Procedures</u>

<u>Tests</u> - Nelson-Denny Reading Test Spitzer Study Skills Test Gray Oral (if students score 8th grade or below on Nelson-Denny)

- 74 -

## Placement Procedures

Students who score below a 10.5 level cut-off point on the Nelson-Denny Test are required to take the course.

## 5. Instruction

- a. Kinds of course in lab: Individualized remedial program.
- b. Most of our students are required to take the course.
  - We do provide instruction for electives to take our course. . Credit: No credit is received for this course.
- c. Credit: No credit 1 d. Major objectives:
  - 1. Improve student's ability to study.
  - 2. To teach students to read material more rapidly with greater understanding.
  - 3. To understand more words without recourse to a dictionary.
  - 4. To engage a dictionary as a life tool.
  - 5. To teach students to use a library's resources with familiarity.
  - 6. To have students show improvement on a standardized reading test.
  - 7. To help students raise their reading level so that they can read with more fluency and understanding.
  - 3. To develop their study skills.
  - 9. To heighten student's self image, self-confidence, his reading, and his role as a college student.
- e. Major objectives (skills stressed)
  - 1. Through tapes, we develop student's listening, working and study skills.
  - 2. Outlining, following author's organizational patterns, main ideas, better study habits, using the dictionary, critical reading, improving rate with better comprehension, increasing vocabulary, drawing conclusions, and summarizing are some of the more important skills stressed.
- f. Books, materials, and equipment utilized
  - 1. SRA Power Builders and SRA Reading for Understanding Kits.
  - 2. Tactics in Reading Kits, Levels I and II.
  - 3. Listen & Read Tapes and Workbooks, Levels GL, MP, MN (EDL Material).
  - 4. Scott-Foresman Materials.
  - 5. Be a Better Reader Series.
  - 6. 88 Passages Material.
  - 7. Controlled Reading Film Strips.
  - 8. McGraw-Hill Film Strips.

- 5. g. Evaluative Frocedures
  - 1. Individual conferences and consultations with instructors.
  - Instructors keep anecdotal reports of student's progress.
  - 3. Students keep records of their progress on graphs and charts in their work folders.
- 5. Summary Statement

To help our students do better in their study skills, we are encouraging better coordination of programs with other departments. Taping lessons for use in demonstration lessons is one way. Department chairmen want to learn more about the Reading Center's work so that their students will raise their reading level. They feel that college level reading ability is an essential skill in passing their curriculum.

The use of Walter Pauk's, <u>How to Study in College</u> as our basic text has been an improvement this year for developing more efficient study habits with our students.

The supply of materials has constantly been replenished. We have been evaluating material so that all levels of reading will be adequately accommodated. More books have been purchased that are at a suitable interest level for our students. Policies and procedures have been revised for better instructions.

New college level skills materials were purchased for volunteers and students who have to repeat the course.

# Suggestions and Changes Recommended

- 1. Block programming designed to provide intensive and extensive remediation in reading be established.
- 2. Closer cooperation between the reading and writing departments.
- 3. In addition to the present courses offered, we suggest that mini courses be given to those students who need help in specific areas. These should be publicized through the school newspaper and bulletins.
- 4. In order to add to the motivation of the student, we suggest that our reading course bear some academic credit, somewhere between one and three credits.
- 5. Compulsory attendance in a Lab situation must be followed.

- 6. We are seeking better programmed material in the area of developing the vocabularies of our students.
- 7. Instructors should teach the deficient students how to read textbooks efficiently and how to use reference material in order to function successfully as college students.

Submitted by Ruth Liberman Reading Skills Center

### PART V

### SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

This study of the reading-study skills problems of students in community colleges of CUNY was made in the fall of 1969, in order to obtain information about the students' selfevaluations of their reading-study skills problems and in order to help educators better understand what they must do if they are to improve the single most important function of education--the teaching of reading. More specifically, this study was concerned with obtaining background information about the community college students in CUNY, to note what are their goals (vocational and scholastic), extra-curricular activities and interests, to analyze factors which may contribute to readingstudy skills problems, to determine what major problems in readingstudy skills students believe they have, to determine correlations between reading-skills problems and factors reasonably assumed to be influential, and to analyze existing reading programs in CUNY which may be attempting to resolve these problems.

Generally the data reflect that these students have many reading-study skills problems and that in many instances the community colleges of CUNY are not providing or are unable to

- 78 -

provide adequate help to remedy these problems. The factors noted in this study that have particular bearing on students' reading-study skills are as follows:

1. Most of the students come from a lower socioeconomic background, work part time or full time, and read occasionally; though they read only occasionally, many do like to read. When they do read, they prefer to read novels, short stories, magazine articles, newspaper articles, and the news in that order.

2. The majority of these students profess to study a lot but with the following problems to some degree:

- a. <u>Physical</u> being tired often.
- b. <u>Psychological-Intellectual</u> finding it difficult to concentrate when reading; worrying about previous or present poor grades; lacking the ability to understand all reading that is assigned; having difficulty in doing school work; worrying about reading ability.
- c. <u>Environmental</u> receiving little encouragement to read from friends and parents; having high school teachers who were not particularly interested in teaching reading; and living in a home situation that does not stimulate an interest in reading.

- 79 -

3. For the majority of these students their problems in reading and studying are mainly centered around comprehension study skills, critical reading, vocabulary (in that order) and to a lesser degree in following directions.

4. With these students fewer physical problems tend to be correlated with fewer reading-study skills problems.

5. Psychological-intellectual problems tend to correlate highly with difficulties in all areas of reading-study skills.

6. Negative environmental factors correlate highly with difficulties in all areas of reading-study skills except for difficulty in following directions.

7. Lack of training in reading textbooks is correlated with all reading study-skills problems except for difficulty in following directions.

8. Students who hold General Diplomas have more difficulty than the other groups of students in all reading-study skills; students who hold Vocational or Technical Diplomas have fewer comprehension-study and critical reading problems than the other groups of students.

9. Students from Spanish speaking homes have more difficulty than other students following directions and reading critically, and students from Italian speaking homes have more difficulty with comprehension-study problems.

- 80 -

10. Students from White Collar homes tend to have fewer comprehension-study skills problems and, along with students from Business and Professional homes, tend to have fewer vocabulary problems than students from other types of homes.

11. Students who are more consistent readers reveal a slight but inconsistent tendency to have fewer reading-study skills problems than other students.

12. Students who study quite a lot but do have some recreation have fewer reading-study skills problems than other students; those who study most of their spare time tend to have slightly more difficulty following directions.

13. At least half of the colleges involved in this study do not have any programs to cope with the reading-study skills problems of their students and those colleges that do have programs are plagued by major problems, in particular, the lack of adequate space and materials, and the inability to award credit to students for work they do in the course or program.

It is clear that from these students' self-evaluations of their reading-study skills problems that the majority of them need help and that generally help is not being given. From what the students say about their secondary school English

- 81 -

teachers and from the National Study of High School English Programs,<sup>2</sup> it is quite apparent that secondary English teachers believe in the cliche "students have learned to read in elementary school; in junior and senior high school they read to learn." Further, it is apparent that the majority of students now in community colleges cannot be looked upon as being prepared to do the difficult reading and academic work presently required of them. Given these circumstances, then, it should also be apparent that colleges can no longer afford to shirk their responsibility of providing reading instruction if they are genuinely interested in their students succeeding.

At a time when all the colleges of CUNY are demanding more funds to cope with open admissions, they cannot avoid giving this matter their immediate attention not only for the good of the students but also in the interest of the public which is beginning to demand that educational institutions be held accountable for their ability to accomplish their aims.

What we need, then, is an intelligent and comprehensive plan of action to be taken by all concerned CUNY personnel if we are to realistically engage in an open admissions policy which "shall maintain and enhance the standards of academic

<sup>&</sup>lt;sup>2</sup>For further information about this study, see James R. Squire and Roger K. Applebee, <u>High School English Instruction Today</u> (New York: Appleton-Century-Crofts, Inc., 1968).

excellence." As a prelude to this course of action all concerned personnel may wish to consider the following recommendations:

## 1. Academic Improvement Service Centers

The Open Admissions Plan calls for supporting services to help students compensate for academic deficiencies in order to avoid high attrition rates which usually accompany open admissions; however, the Plan is relatively vague about what these supporting services should be and how they might be structured. Because these supporting services are absolutely basic and necessary to maximize the probability of success for all students and because so little thought has been given to them to date, immediate attention should be given to establishing Academic Improvement Service Centers at all the colleges in CUNY.

These centers might perform the following functions:

a. Engage in freshmen orientation and subsequent individual counseling of all incoming students.

b. Establish workshops immediately in reading-study skills,
writing, and mathematics and later in other academic areas.
These workshops should be for all students of varying success
who seek aid. In order for these workshops to be meaningful

- 83 -

and not conducted in a vacuum, as they often are, these workshops should be cocurricular offerings which are geared closely to the work the student is doing in his regular courses.

## 2. <u>Reading Clinic</u>

Establish a reading clinic in order to provide the following three essential services which would help to supplement efforts of those conducting the workshops and regular academic classes: diagnosis, prescription, and remediation of reading problems.

ş

## 3. Faculty Involvement

In all colleges a Reading-Study Skills Improvement Committee should be established in order to insure representation of all academic disciplines and in order to get the total faculty involved in helping to insure the students' academic improvement. This committee should be charged with *reporting* on what readingstudy skills are needed in work assigned in respective academic areas. The recognition of need for reading-study skills improvement must come from the faculty, as well as administrators and students. Improvement dictated from higher authority should be avoided.

# 4. In-Service Training of Teachers

ERIC

Once a faculty, or a substantial part of it, has indicated a realization of the need for improvement, in-service

- 84 -

training should be given in order to insure that instructors are aware of the students' problems as stated here and know what to do with the information the committee accumulates so that they might give appropriate skills guidance to supplement their subject matter instruction. Only when such in-service training is given will the Academic Improvement Service Center become more professional and effective; and only when such in-service training is given will the college maximize the probability of success for all students.

## 5. <u>Student Involvement</u>

Evaluation of academic improvement services must be continual and students should be involved in order to assure a more objective appraisal of aims, procedures, and results, as well as to insure that all activities are relevant to their needs.

## 6. Development of Aims, Tests, Methods, and Materials

In order to avoid the ever threatening prospect of having creative ideas die whenever a community of scholars is organized in institutions that are not fully aware of the problems, special care must be taken to avoid the setting of impromptu aims and the utilization of impromptu tests, methods, and materials; and care must be taken to restrict the demand for total services. Administrators should give enthusiastic support in terms of money and personal effort. In addition, qualified personnel need to be granted time to work on the development of all of the above items, to discuss them with interested parties, and to present formally in writing their achievements to administrators, faculty, and students in the college and the university at large.

## 7. University Conference on Reading-Study Skills

All people in CUNY working in this area should agree to hold a symposium on reading-study skills where an exchange of ideas might take place. Currently too little communication exists between the various units of CUNY, and, if the maximum of effort is to be made on improving the abilities of students entering on the Open Admissions Plan, all personnel must cooperate with each other and avoid the infantile approach of thinking solely of one's college or developing one's own empire.

### 8. Additional Research

Action research which involves the classroom teachers, not just theoretical research, must be conducted in this area to bring about immediate improvement in the classrooms throughout CUNY. All colleges should direct the major portion of their

- 86 -

attention to this problem rather than simply trying to justify past courses of action or making a virtue of mistakes they do not want to correct.

The conclusions and recommendations pointed out here are by no means complete for we are merely beginning in this area of work and we are still in a period of discovery. For this reason this study should be considered primarily an attempt to awaken the need for additional research and to engage educators in a dialogue about reading-study skills problems, problems which must be eliminated if we are to have a realistic and tenable open admissions policy and problems which must be eliminated if we are to change the public's feeling that educators will admit "dealing with students' concerns is the best policy" but they will try everything else first.

#### STUDENT QUESTIONNAIRE RELATED TO READING

If you will consider all questions <u>thoughtfully</u> and answer them <u>honestly</u>, you will greatly assist us in planning instructional programs that will better contribute to your reading achievement. There are no right or wrong answers to the questions, and therefore no evaluative judgments will be made of you. (If you prefer not to give your name, please omit in.) Our only interest is to learn more about what conditions may affect your reading achievement so that we may promote greater understanding and better programs in college.

#### APPENDIX C

### NOTES ON PROCESSING THE QUESTIONNAIRE

The following items involved special handling: "Father's Occupation" was broken into five groups: White Collar, Blue Collar, Professional and Business, Other, No Answer. The occupations included in each of the groups, while somewhat arbitrary, were as follows:

White Collar: Postal Employees, Clerks, Editors, Managers, Salesmen Blue Collar: Metal workers, Butchers, Tailors, Furriers, Cab drivers, Policemen, Guards, Cooks, Chefs, Waiters, Bartenders, Foremen

Business and Professional: Merchants, Businessmen, Business owners, Doctors, Lawyers, Architects, Accountants

Other: This category includes all answers which did not indicate function such as "USAF" or Leather Goods", but most of the answers in this category were "Deceased," "Retired," or "Veteran".

"Mother's Occupation" was given three categories: Works, Does not work, No Answer.

1. What is your vocational goal: Check one.

Art	Ministry
Business	Music
Data Processing	Police Science
Dentistry	Psychology
Entertainment	Research
Hotel Technology	Secretary
Law	Science
Nursing	Social Work
Mathematics	Teaching
Mechanical Technology	Writing
Medicine	Other (Specify)

"Vocational Goals" above were reduced to a smaller number of categories than contained in the questionnaire. A cursory survey of the questionnaires indicated that the most common answers to this question were Business, Data Processing, Medicine and Teaching. It indicated that very few students responded to Mechanical Technology but a number wrote in electrical technology or engineering.

No Answer

In the coding, all of the technology and engineering was classified under technology. There were also a large number of respondents going into "Nursing," this vocational goal was placed in with "Medicine".

2. Why did you choose this vocation? Check the main reason.

\_\_\_\_\_Financial \_\_\_\_\_Social Status \_\_\_\_\_Personal Satisfaction \_\_\_\_\_Other (specify)

In the above question, the respondents sometimes checked more than one answer, e.g., one student checked "Financial" once, "Social Status" twice, and "Personal Satisfaction" three times. "Personal Satisfaction" was coded.

3. What is your scholastic goal? <u>AS AA BA BS MA</u> <u>MS Ed.D.</u> Ph.D.

Several respondents wrote "AAS" as a scholastic goal, "AS" was coded in these cases.

EXTRACURRICULAR ACTIVITIES AND INTERESTS

- 4. Have you ever worked? \_\_\_\_\_Yes \_\_\_\_No
- 5. If so, was it full-time \_\_\_\_\_ or part-time \_\_\_\_\_? In what occupation(s)?
- 6. Which one of these jobs did you like best and why?\_\_\_\_\_

The above questions were coded as one, with following answers Worked full time Worked part time Never worked No Response.

Occupation and job preference were excluded because they were considered too ambiguous for coding for statistical analysis.

7. Are you working now? Yes No If so, how many hours a week?

- 97 -

The above two questions were encoded as one, indicating how many hours the student works per week:

None or 0 1 - 10 11 - 12 21 - 30 Over 30 No Answer.

Occupation was left uncoded.

8. What extracurricular activities occupy most of your time (specify number of hours per week)?

Athletic events	
Art exhibits	
Concerts	
Dances	
Movies	
Parties	
Radio	
Reading	
Sports	
TV	
Other, such as a club	(specify)

Each activity in the above question was given three possible codes: Under 5 hours per week 5 hours or more None or No Answer

If the respondent only checked the activities, under 5 hours was coded.

11. Please check the following, indicating your preference in reading.

		Preferred	Less Preferred	<u>Dislike</u>
1.	Nove1s			
2.	Short stories			
3.	Essays			
4.	Biographies			
5.	Plays	- <u>-</u>		
6.	Poetry	مندومین <u>الاندام</u> بیداین		
7.	News			
2 2	Newspaper articles			
0. n	Newspaper articles		<u> </u>	
y.	Magazine articles	<del></del>		
10.	Books or articles on technical subjects			
11.	Comic books			
12.	Sports writers			
13.	Mysteries		<del>~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~</del>	
14.	Literary classics			
	U LIIGI	ويعرومك بروياني بارام بالاتهار		
In question 11 above, preference in reading was given one of four possible scores:

Preferred Less Preferred Dislike No Answer

There was a tendency for respondents to lose track of the row they were checking. Some judgement was used by the coders to infer the meaning of the respondent.

All of the questions on pages 4,5 and 6 were given one of four possible codes: Yes Somewhat No No Answer

Each group of questions such as "Physical," or "Psychological, Intellectual," was given an index which consisted of the total of Negative answers or "Problems" in these categories. The answers which were included in these sums are those contained in the boxes on the last three pages of the questionnaire in Appendix B. As an example, if the following answers were given to "Physical Factors" (below) the index of "Negative" physical factors would be three. In other words the respondent indicated that he has three physical problems.

## **Physical**

	Yes	Somewhat	No
Are you frequently ill?	<u>X</u>		
Do you have a physical handicap?	<u>x</u>		
Do you have a speech handicap?			X
Are you often tired?		<u> </u>	
Is your vision good?		<u></u>	
Is your hearing good?	<u>X</u>		
Do you feel you are in good physical condition?	? <u>X</u>		

## Statistical Processing

Cross-tabulations were performed to indicate the correlation of factors presumed to affect reading-study skills, with indications (from answers on the questionnaire) of reading problems. The indicators of reading difficulties that were thus examined were:

- 1) "Do you have difficulty following directions?"
- 2) The number of Vocabulary Problems
- 3) The number of Comprehensive Study Skills Problems
- 4) The number of Critical Reading Problems.

The correlative factors that were examined were: .

"Type of Diploma" "Language other than English spoken in the home" "Fathers Occupation" "How much do you read (outside of school work)?" "How much time do you spend in serious study for school subjects?" All of the questions under 'Physical Factors ' and the <u>number</u> of <u>Physical Problems</u> All of the "Psychological-Intellectual Factors" and the <u>number</u> of problems in this area. The number of "Environmental" problems. "Have you received training in how to read textbooks?"

Where indices were used, instead of individual questions, it was a matter of expedience. Further it was felt that a profile of the student's answers were more consistent than the individual answers, such as those dealing with environmental factors.

ERIC

## APPENDIX D

## OUTLINE USED TO DESCRIBE COLLEGE READING PROGRAMS

Please write a concise description of your <u>present</u> reading program in terms of the following:

- 1. Staff:
  - number of people currently teaching reading
  - their training or qualifications to teach reading, not English
- 2. Other Personnel:
  - cooperation (or lack of it) with other departments, counselors, etc.
- 3. Students:
  - the number enrolled in the college
  - the number enrolled in the reading program
  - the average number enrolled in a reading class
  - any information you have regarding their reading problems and general level of performance
