Contents

Abbreviations	xi
Contributors	xiii

The Role of GABA in the Mediation and Perception of Pain

S. J. Enna and Kenneth E. McCarson

I. Chapter Overview	1
II. Introduction	2
III. Molecular and Anatomical Considerations	3
IV. Pharmacological Studies	9
V. Summary and Conclusions	18
References	19

Distribution of GABA Receptors in the Thalamus and Their Involvement in Nociception

Fani L. Neto, Joana Ferreira-Gomes, and José M. Castro-Lopes

I. Chapter Overview	29
II. Introduction	30
III. GABA Receptors in the Thalamus	32
IV. Role of GABA Receptors in Nociception Within the Thalamus	40
References	43

GABA_A Agonists and Partial Agonists: THIP (Gaboxadol) as a Non-Opioid Analgesic and a Novel Type of Hypnotic

(This is a revised and updated version of an article entitled “GABA_A agonists and partial agonists: THIP (Gaboxadol) as a non-opioid analgesic and a novel type of hypnotic” that appeared in *Biochem. Pharmacol.* 68, 1573–1580 (2004).)

Povl Krosggaard-Larsen, Bente Frølund, and Tommy Liljefors

- I. Chapter Overview 53
- II. GABA Receptors: Multiplicity, Structure, and Function 54
- III. GABA_A Agonists 56
- IV. Partial GABA_A Agonists 60
- V. 4-PIOL Analogs as GABA_A Antagonists 61
- VI. Behavioral and Clinical Effects of the Partial GABA_A Agonist THIP (Gaboxadol) 63
- VII. Conclusions 66
- References 67

Rat Modeling for GABA Defects in Schizophrenia

Francine M. Benes and Barbara Gisabella

- I. Chapter Overview 73
- II. Introduction 74
- III. Rodent Model for Postmortem Findings in Schizophrenia 81
- IV. Commentary 86
- References 89

Epigenetic Targets in GABAergic Neurons to Treat Schizophrenia

E. Costa, E. Dong, D. R. Grayson, W. B. Ruzicka, M. V. Simonini, M. Veldic, and A. Guidotti

- I. Chapter Overview 95
- II. Introduction 96
- III. Regulation of Histone Acetylation 98
- IV. Chromatin Remodeling at Neuromuscular Junction 98
- V. Chromatin Remodeling During Memory Formation 99
- VI. Role of Reelin and Apolipoprotein E Receptors in Hippocampal Plasticity and Learning 101
- VII. Is Reelin Expressed Only in a Selective Subpopulation of GABAergic Neurons? 103
- VIII. *RELN* and *GAD₆₇* CpG Island Promoter Hypermethylation and Reelin and *GAD₆₇* Expression Downregulation in SZ Patients 104
- IX. Increased DNA-Methyltransferase-1 Expression in Cortical GABAergic Neurons of SZ Patients 105

- X. Relationship Between DNMT1 Overexpression and Reelin and GAD₆₇ Downregulation in GABAergic Neurons of SZ Patients 106
- XI. Pharmacological Strategies to Reduce Reelin and GAD₆₇ Promoter Hypermethylation in SZ Patients 107
- XII. The MET-Induced Epigenetic Mouse Model to Evaluate Prospective HDAC Inhibitors to be Used to Influence Epigenetic Mechanisms in Cortical GABAergic Neurons 110
- XIII. Conclusions 111
References 112

GABAergic Malfunction in the Limbic System Resulting from an Aboriginal Genetic Defect in Voltage-Gated Na⁺-Channel SCN5A is Proposed to Give Rise to Susceptibility to Schizophrenia

Eugene Roberts

- I. Chapter Overview 119
- II. Introduction 120
- III. Levels of Concern 123
- IV. The Hypothalamo-Hypophyseal System 129
- V. The Cybernins 130
- VI. A Failed Therapeutic Adventure 132
- VII. Linkage of Propranolol Cognitive Effects with Correction of a Limbic System Defect that Results in Failure of Habituation in Schizophrenia (see Gruzelier, 1978) 135
- VIII. Susceptibility to Schizophrenia may Result from Mutation of the Na⁺ Channel-Coding SCN5A Gene, Which Occurs at Uniquely High Levels in Neural Components of the Limbic System 137
- IX. Recyberneticizing Substances and Mechanisms of Their Action 139
- X. Problems in Therapy with Racemic Propranolol 141
- XI. The GABA System and Schizophrenia 141
References 144

GABA_A Receptor Mutations Associated with Generalized Epilepsies

(This is a revised and updated version of an article entitled “GABA_A receptor epilepsy mutations” that appeared in *Biochem. Pharmacol.* 68, 1497–1506 (2004).)

Robert L. Macdonald, Jing-Qiong Kang, Martin J. Gallagher, and Hua-Jun Feng

- I. Chapter Overview 147
- II. GABA_A Receptors 148
- III. GABA_A Receptor Epilepsy Genes 149

- IV. Conclusions 165
- References 167

From Gene to Behavior and Back Again: New Perspectives on GABA_A Receptor Subunit Selectivity of Alcohol Actions

(This is a revised and updated version of an article entitled “ γ -Aminobutyric Acid A Receptor Subunit Mutant Mice: New Perspectives on Alcohol Actions” that appeared in *Biochem. Pharmacol.* 68, 1581–1602 (2004).)

Stephen L. Boehm II, Igor Ponomarev, Yuri A. Blednov, and R. Adron Harris

- I. Abstract 171
- II. Chapter Overview 172
- III. α -Subunit Knockout Mice 173
- IV. β -Subunit Knockout Mice 179
- V. γ 2-Subunit Knockout and Transgenic Mice 181
- VI. δ -Subunit Knockout Mice 182
- VII. GABA_A Receptor Subunit Knock-in Mice 184
- VIII. Functional Compensation in Genetically Altered Mice: Gene–Behavior Associations Put into Context 185
- IX. GABA_A Receptor Subunit-Associated Quantitative Trait Loci 186
- X. GABA_A Receptor Subunit-Associated Gene Expression Patterns 193
- XI. Conclusions 195
- References 196

A Role for GABA in Alcohol Dependence

(This is a revised and updated version of an article entitled “A role for GABA mechanisms in the motivational effects of alcohol” that appeared in *Biochem. Pharmacol.* 68, 1515–1525 (2004).)

George F. Koob

- I. Chapter Overview 205
- II. Alcohol and GABA 206
- III. Targets Within the Addiction Cycle Relevant for Actions of GABA 209
- IV. Extended Amygdala: A Basal Forebrain Macrostructure as a Focal Point for GABAergic Actions on Alcohol Reinforcement 210
- V. Role for GABA in Acute Alcohol Reinforcement 211
- VI. Effects of GABAergic Agents on Self-Administration of Alcohol in Nondependent Rats 211
- VII. Effects of GABAergic Agents on Self-Administration of Alcohol in Dependent Rats 215
- References 224

Structure, Pharmacology, and Function of GABA_A Receptor Subtypes

Werner Sieghart

- I. Chapter Overview 231
- II. Introduction 232
- III. Heterogeneity of GABA_A Receptors 232
- IV. Pharmacology of GABA_A Receptors 234
- V. Function of GABA_A Receptor Subtypes in the Brain 248
- VI. GABA_A Receptor Structure 250
- References 254

Structure–Activity Relationship and Pharmacology of γ -Aminobutyric Acid (GABA) Transport Inhibitors

Rasmus Prætorius Clausen, Karsten Madsen, Orla Miller Larsson, Bente Frølund, Povl Krosgaard-Larsen, and Arne Schousboe

- I. Chapter Overview 265
- II. The GABAergic Synapses 266
- III. Transporter Heterogeneity, Nomenclature, and Function 267
- IV. Structure–Activity Relationship of GABA Uptake Inhibitors 268
- V. Kinetics of GABA Uptake Inhibitors 273
- VI. Reevaluation of Lipophilic Aromatic GABA Uptake Inhibitors 275
- VII. Conclusions 280
- References 281

Modulation of Ionotropic GABA Receptors by Natural Products of Plant Origin

Graham A. R. Johnston, Jane R. Hanrahan, Mary Chebib, Rujee K. Duke, and Kenneth N. Mewett

- I. Chapter Overview 285
- II. Introduction 286
- III. Ionotropic GABA Receptors 287
- IV. Flavonoids 289
- V. Terpenoids 296
- VI. Other Phenolic Compounds 300
- VII. Polyacetylenic Alcohols 303
- VIII. Alcoholic Beverages Containing GABA Receptor Modulators 305
- IX. GABA Receptor Modulators in Tea and Coffee 307
- X. Plant Sources of GABA Receptor Modulating Substances: Implications for Herbal Medicines 307
- References 309
