

The Statistical Mechanics of Interacting Walks, Polygons, Animals and Vesicles

E. J. JANSE van RENSBURG

*Associate Professor of Mathematics
York University, Toronto*

OXFORD
UNIVERSITY PRESS

Contents

1	Introduction	1
1.1	Lattice models of polymers and vesicles	1
1.2	Walks and polygons	4
1.2.1	Growth constants	4
1.2.2	Generating functions	6
1.2.3	The metric exponent	8
1.3	Scaling	9
1.3.1	The correlation length	9
1.3.2	Scaling relations	11
1.3.3	Branched polymers	12
2	Tricriticality	15
2.1	Interacting models of polygons	15
2.2	Classical tricriticality	18
2.3	Finite size scaling	23
2.4	Homogeneity of the generating function	26
2.5	Uniform asymptotics and the finite size scaling function	28
2.5.1	Asymmetric tricriticality and ϵ -asymptotics	28
2.5.2	Extended tricriticality	30
2.5.3	Uniform asymptotics for the generating function	33
2.5.4	The finite size scaling function	36
3	Density functions and free energies	39
3.1	The density function	39
3.1.1	Density functions	39
3.1.2	Integrated density functions	44
3.2	Density functions and free energies	50
3.3	Properties of the density function	53
3.3.1	Jump discontinuities at the end-points of $[\epsilon_m, \epsilon_M]$	54
3.3.2	Finite right- and left-derivatives at ϵ_m and ϵ_M	54
3.3.3	A jump discontinuity in $d\mathcal{P}_\#(\epsilon)/d\epsilon$	56
3.3.4	$\log \mathcal{P}_\#(\epsilon) = \kappa\epsilon + \delta$ in $[\epsilon', \epsilon'']$	57

3.4	Examples	57
3.4.1	Chromatic polynomial of path graphs	57
3.4.2	Combinations	57
3.4.3	Directed or staircase walks in the square lattice	59
3.4.4	Partitions	60
3.4.5	Queens on a chessboard	62
3.4.6	Adsorbing walks	63
4	Exact models	65
4.1	Introduction	65
4.2	Partition polygons (Ferrers diagrams)	67
4.2.1	The area–perimeter generating function of partition polygons	67
4.2.2	Asymptotic analysis of the partition generating function	70
4.3	Stack polygons	74
4.3.1	The area–perimeter generating function of stack polygons	74
4.3.2	Asymptotic analysis of the stack generating function	76
4.3.3	Spiral walks	78
4.4	Staircase polygons	80
4.4.1	Perimeter generating function by counting paths	81
4.4.2	Perimeter generating function by algebraic languages	82
4.4.3	Area–perimeter generating function by a Temperley method	86
4.4.4	Pólya’s method for staircase polygons	89
4.4.5	Area–perimeter generating function from a functional equation	93
4.4.6	Other models of convex polygons	96
4.5	The adsorption of staircase walks on the main diagonal	98
4.5.1	Staircase walks above the main diagonal	98
4.5.2	Staircase walks adsorbing on the main diagonal	101
4.5.3	Staircase walks adsorbing on to a penetrable diagonal	103
4.5.4	Adsorbing staircase walks with an area activity	104
4.5.5	The constant term formulation and adsorbing staircase walks	105
4.5.6	A staircase walks model of copolymer adsorption	108
4.5.7	Staircase polygons above the main diagonal	111
4.6	Partially directed walks with a contact activity	117
4.7	Directed animals and directed percolation	122
5	Interacting models of walks and polygons	126
5.1	Walks and polygons	126
5.1.1	Unfolded walks	127
5.1.2	Loops and polygons	133
5.1.3	The pattern theorem	135
5.1.4	Density functions and prime patterns	140
5.2	The pattern theorem and interacting models of walks	143
5.2.1	The free energy of <i>fl</i> -walks	144
5.2.2	Interacting models of polygons and walks	147
5.2.3	The pattern theorem for interacting models	148

5.3	Polygons with curvature	157
5.3.1	Curvature in polygons	157
5.3.2	Curvature and knotted polygons	160
5.3.3	Curvature and writhe	161
5.3.4	Curvature and contacts	165
5.4	Polygons interacting with a surface: adsorption	167
5.4.1	Positive polygons	168
5.4.2	Location of the adsorption transition	174
5.4.3	Excursions and the adsorption transition	177
5.4.4	A density of excursions	181
5.4.5	Collapsing and adsorbing polygons	183
5.4.6	Copolymer adsorption	189
5.5	Torsion in polygons	194
5.6	Dense walks and composite polygons	200
5.6.1	Walks which cross a square	201
5.6.2	Complex composite polygons	207
5.6.3	The unfolding of polygons	209
5.6.4	Simple composite polygons	215
5.6.5	The free energy of simple composite polygons	218
5.6.6	Density functions of simple composite polygons	221
5.6.7	Interacting models of simple composite polygons	224
6	Animals and trees	227
6.1	Lattice animals and trees	227
6.1.1	The growth constant of lattice animals	227
6.1.2	A submultiplicative relation for t_n	230
6.2	Pattern theorems and interacting models of lattice animals	232
6.3	Collapsing animals	237
6.3.1	The cycle model	238
6.3.2	The cycle-contact model	242
6.4	Adsorbing trees	250
6.4.1	The free energy of adsorbing and collapsing trees	251
6.4.2	The phase diagram of adsorbing and collapsing trees	255
6.4.3	The location of the adsorption transition	257
6.4.4	Excursions and roots in the adsorption transition	260
6.4.5	Excursions and roots in adsorbing trees	262
6.4.6	Adsorption of percolation clusters	264
6.4.7	Branched copolymer adsorption	267
6.5	Embeddings of graphs with specified topologies	271
6.5.1	A pattern theorem for embedded graphs in the cubic lattice	272
6.5.2	Knotted embeddings of graphs	276
6.5.3	Walks and polygons in wedges and uniform animals	278

7 Lattice vesicles and surfaces	285
7.1 Introduction	285
7.2 Square lattice vesicles	285
7.2.1 The Fisher–Guttman–Whittington vesicle	286
7.2.2 The perimeter of a vesicle	291
7.3 Punctured disks in two dimensions	293
7.3.1 Submultiplicativity of disks	294
7.3.2 The asymptotic behaviour of punctured disks	298
7.3.3 Pattern theorems for punctured disks in two dimensions	301
7.4 Adsorbing disks in three dimensions	303
7.4.1 Unfolded disks	303
7.4.2 Bounds on D_n	306
7.4.3 The free energy of positive disks	308
7.4.4 The location of the adsorption transition	311
7.5 Crumpling surfaces	313
7.5.1 The density function	315
7.5.2 Bounds on $\mathcal{V}_s(z)$	319
7.5.3 A crumpling transition in surfaces with connected skeletons	326
7.5.4 Inflating and crumpling c -surfaces	327
Appendix A: Subadditive functions	333
Appendix B: Convex functions	339
Appendix C: Asymptotics for q-factorials	346
Appendix D: Bond or edge percolation	350
Bibliography	359
Index	377
