Foreword	v
I Euclidean Steiner Problem	1
1 Introduction	3
1.1 Historical Background	3
1.2 Some Basic Notions	5
1.3 Some Basic Properties	6
1.4 Full Steiner Trees	8
1.5 Steiner Hulls and Decompositions	9
1.6 The Number of Steiner Topologies	13
1.7 Computational Complexity	14
1.8 Physical Models	16
References	17
2 Exact Algorithms	21
2.1 The Melzak Algorithm	22
2.2 A Linear-Time FST Algorithm	23
2.3 Two Ideas on the Melzak Algorithm	25
2.4 A Numerical Algorithm	26
2.5 Pruning	27
2.6 The GEOSTEINER Algorithm	28
2.7 The Negative Edge Algorithm	30
2.8 The Luminary Algorithm	32
References	33
3 The Steiner Ratio	37
3.1 Lower Bounds of ρ	38
3.2 The Small n Case	39
3.3 The Variational Approach	41
3.4 The Steiner Ratio Conjecture as a Maximin Problem	42
3.5 Critical Structures	44
3.6 A Proof of the Steiner Ratio Conjecture	45
References	48
4 Heuristics	51
4.1 Minimal Spanning Trees	52
4.2 Improving the MST	52
4.3 Greedy Trees	54
4.4 An Annealing Algorithm	55

4.5	A Partitioning Algorithm	57
4.6	Few's Algorithms	57
4.7	A Graph Approximation Algorithm	58
4.8	k -Size Quasi-Steiner Trees	59
4.9	Other Heuristics	60
	References	60
5	Special Terminal-Sets	63
5.1	Four Terminals	63
5.2	Cocircular Terminals	66
5.3	Co-path Terminals	68
5.4	Terminals on Lattice Points	71
5.5	Two Related Results	73
	References	75
6	Generalizations	77
6.1	d -Dimensional Euclidean Spaces	77
6.2	Cost of Edge	80
6.3	Terminal Clusters and New Terminals	83
6.4	k -SMT	84
6.5	Obstacles	85
	References	87
II	Steiner Problem in Networks	91
1	Introduction	93
1.1	Applications	94
1.2	Definitions	95
1.3	Trivial Special Cases	97
1.4	Problem Reformulations	97
1.5	Complexity	100
	References	101
2	Reductions	103
2.1	Exclusion Tests	104
2.2	Inclusion Tests	112
2.3	Integration of Tests	118
2.4	Effectiveness of Reductions	122
	References	123
3	Exact Algorithms	125
3.1	Spanning Tree Enumeration Algorithm	125
3.2	Degree-Constrained Tree Enumeration Algorithm	126
3.3	Topology Enumeration Algorithm	127
3.4	Dynamic Programming Algorithm	128

3.5	Branch-and-Bound Algorithm	130
3.6	Mathematical Programming Formulations	132
3.7	Linear Relaxations	137
3.8	Lagrangian Relaxations	138
3.9	Benders' Decomposition Algorithm	141
3.10	Set Covering Algorithm	143
3.11	Summary and Computational Experience	144
	References	147
4	Heuristics	151
4.1	Path Heuristics	151
4.2	Tree Heuristics	156
4.3	Vertex Heuristics	164
4.4	Contraction Heuristic	169
4.5	Dual Ascent Heuristic	171
4.6	Set Covering Heuristic	171
4.7	Summary and Computational Experience	172
	References	172
5	Polynomially Solvable Cases	177
5.1	Series-Parallel Networks	177
5.2	Halin Networks	180
5.3	k-Planar Networks	181
5.4	Strongly Chordal Graphs	185
	References	187
6	Generalizations	189
6.1	Steiner Trees in Directed Networks	189
6.2	Weighted Steiner Tree Problem	190
6.3	Steiner Forest Problem	191
6.4	Hierarchical Steiner Tree Problem	191
6.5	Degree-Dependent Steiner Tree Problem	192
6.6	Group Steiner Tree Problem	193
6.7	Multiple Steiner Trees Problem	195
6.8	Multiconnected Steiner Network Problem	196
6.9	Steiner Problem in Probabilistic Networks	198
6.10	Realization of Distance Matrices	199
6.11	Other Steiner-Like Problems	199
	References	200

III	Rectilinear Steiner Problem	203
1	Introduction	205
1.1	Definitions	205
1.2	Basic Properties	208
1.3	A Characterization of RSMTs	211
1.4	Problem Reductions	212
1.5	Extremal Results	215
1.6	Computational Complexity	218
1.7	Exact Algorithms	218
	References	218
2	Heuristic Algorithms	221
2.1	Heuristics Using a Given RMST	221
2.2	Heuristics Based on MST Algorithms	229
2.3	Computational Geometry Paradigms	233
2.4	Other Heuristics	237
	References	240
3	Polynomially Solvable Cases	243
3.1	Terminals on a Rectangular Boundary	243
3.2	Rectilinearly Convex Boundary	251
3.3	Layered Terminal Sets	253
	References	254
4	Generalizations	257
4.1	Rectangle Trees	257
4.2	Rectilinear Steiner Arborescences	258
4.3	Steiner Trees in Hypercubes	261
4.4	Higher Dimensions	263
	References	265
5	Routing	267
5.1	Introduction	267
5.2	Heuristics for Single Nets	270
5.3	Heuristics for Multiple Nets	276
5.4	Multiple Layers	280
	References	282
IV	Other Steiner Problems	285
1	Steiner Trees in Other Metric Spaces	287
1.1	Minkowski Spaces	287
1.2	Minkowski Planes and l_p Metrics	289
1.3	λ -Geometry and Hexagonal Plane	291
1.4	Better Heuristics for Arbitrary Metric Spaces	295

1.5	Bounds for the Performance Ratios of Quasi-STs	297
	References	300
2	Phylogenetic Trees	301
2.1	Definitions	302
2.2	Compatibility Methods	304
2.3	Maximum Parsimony Methods	306
2.4	Wagner Parsimony Method	308
2.5	Other Maximum Parsimony Methods	313
2.6	Maximum Likelihood Methods	314
2.7	Distance Methods	315
	References	318
	Subject Index	323
	Author Index	335
