# THE STRESS ANALYSIS OF CRACKS HANDBOOK

THIRD EDITION

HIROSHI TADA

PAUL C. PARIS

GEORGE R. IRWIN

The American Society of
Mechanical Engineers, New York

Professional Engineering Publishing Limited
London and Bury St Edmunds, UK

# TABLE OF CONTENTS

**List of Symbols** viii
**Foreword by G. R. Irwin** xvi
**Preface - Third Edition** xvii
**Preface - Second Edition** xviii
**Preface - First Edition** xix
**Acknowledgments to the First Edition** xx

**Part I**
**Introductory Information** 1
Introduction 2(1.1)
Crack-Tip Stress Fields for Linear-Elastic Bodies 2(1.1–1.3a)
Alternate Expressions for Crack-Tip Elastic Fields 6(1.3b–1.3c)
Slender Notches and Stress Concentrations from Stress Intensity Factors 8(1.4–1.6)
Energy Rate Analysis of Crack Extension 11(1.6–1.7)
Relationships between $\mathcal{G}$ and $K$ 12(1.7–1.8)
Superposition of $\mathcal{G}$ and $K$ Results 13(1.8)
Meaning of Plane Stress and Plane Strain for Fracture Mechanics Purposes 14(1.9–1.10)
Effects of Small Scale Yielding on Linear-Elastic Fracture Mechanics 16(1.11)
Introduction to Stress Function Methods 17(1.12–1.17)
Additivity of Crack Stress Fields and $K$ Values 22(1.17–1.18)
Boundary Collocation Method 23(1.18–1.19)
Successive Boundary Stress Correction Method 24(1.19–1.20)
$K$ Estimates from Finite Element Methods 25(1.20–1.21)
Additional Remarks for Part I 26(1.21)
A. Unified Formulation for In-Plane Two-Dimensional Problems 26(1.21–1.22)
B. On Completeness of Westergaard Single-Function Method for Analysis of Cracks 27(1.22–1.26)
C. Effect of Surface Interference of Partly Closed Cracks 31(1.26–1.33)

**Part II**
**Stress Analysis Results for Common Test Specimen Configurations** 39
The Center Cracked Test Specimen 40(2.1–2.5a)
The Double Edge Notch Test Specimen 46(2.6–2.9a)
The Single Edge Notch Test Specimen 52(2.10–2.12)
The Pure Bending Specimen 55(2.13–2.15)
The Three-Point Bend Test Specimen 58(2.16–2.18)
The Compact Tension Test Specimen 61(2.19–2.21)
The Round (Disk-Shaped) Compact Specimen 64(2.22)
The Arc-Shaped (C-Shaped) Specimen 65(2.23)
Other Common Specimen Configurations 66(2.24–2.37)
Electrical Potential Calibration 80(2.38)

**Part III**
**Two-Dimensional Stress Solutions for Various Configurations with Cracks** **81**

**A. Cracks Along a Single Line**
A Semi-Infinite Crack in an Infinite Plane 82 (3.1–3.12)
Two (Opposing) Semi-Infinite Cracks in an Infinite Plane 96 (4.1–4.16a)
A Finite Crack in an Infinite Plane 124 (5.1–5.22a)
Multiple Cracks in an Infinite Plane 165 (6.1–6.5)
A Periodic Array of Cracks in an Infinite Plane 170 (7.1–7.11)
An Edge Crack in a Semi-Infinite Plane 193 (8.1–8.18)
A Semi-Infinite Crack (Leaving a Finite Ligament) in a Semi-Infinite Plane 219 (9.1–9.6a)
Finite Crack(s) in a Semi-Infinite Plane 227 (10.1–10.4)
An Internal and Edge Crack(s) in a Finite Width Strip or in a Rectangular and Circular Regions 232 (11.1–11.15)
**B. Parallel Cracks**
Parallel Semi-Infinite Cracks in an Infinite Plane 247 (12.1–12.6)
Opposing Parallel Semi-Infinite Cracks in an Infinite Plane 253 (13.1–13.3)
Finite Parallel Cracks in an Infinite Plane 256 (14.1–14.7)
Parallel Edge Cracks in a Semi-Infinite Plane 264 (15.1–15.2)
A Semi-Infinite Crack Parallel to Edges of an Infinite Strip 266 (16.1–16.6)
A Finite Crack Parallel to Edges of an Infinite Strip 272 (17.1–17.13)
Transverse Crack(s) in an Infinite or a Finite Strip 285 (18.1–18.4)
**C. Cracks and Holes or Notches**
Crack(s) Emanating from a Hole or a Notch in an Infinite, a Semi-Infinite or a Finite Plane 289 (19.1–19.17)
Crack(s) at a Juncture of a Strip and a Semi-Infinite Plane 306 (19.18–19.19)
A Finite Crack Near Hole(s) in an Infinite Plane 308 (20.1–20.6)
**D. Curved, Angled, Branched, or Radiating Cracks**
Curved, Angled, Branched, or Radiating Crack(s) in an Infinite Plane 314 (21.1–21.17)
**E. Cracks in Reinforced Plates**
Finite Crack(s) in an Infinite Plane with Reinforced Regions 331 (22.1–22.2)

**Part IV**
**Three-Dimensional Cracked Configurations** **333**

A Semi-Infinite Crack in an Infinite Body 334 (23.1–23.8)
An Embedded Circular Crack in an Infinite Body 342 (24.1–24.26)
An External Circular Crack (a Circular Net Section) or a Circular Ring (an Annular) Crack in an Infinite Body 369 (25.1–25.10)
An Elliptical Crack or Net Section and a Parabolic Crack in an Infinite Body 384 (26.1–26.6)
An External Circular Crack in a Round Bar 390 (27.1–27.3)
An Internal Circular Crack in a Round Bar 396 (27.4–27.6)
An Internal Circumferential Crack in a Thick-Walled Cylinder 402 (27.7–27.8a)
An External Circumferential Crack in a Thick-Walled Cylinder 406 (27.9–27.10a)
A Half-Circular Surface Crack in a Semi-Infinite Body 410 (28.1–28.2)
A Quarter-Circular Corner Crack in a Quarter-Infinite Body 412 (28.3–28.5)

**Part V**
**Crack(s) in a Rod or a Plate by Energy Rate Analysis** **415**

Bending, Shearing, and Tension/Compression 416 (29.1–29.15)

**Part VI**
**Strip Yield Model Solutions** **431**

Introduction to Strip Yield Model Analysis 432 (30.1–30.2)
Additional Notes on Strip Yield Models 433 (30.2)
Two-Dimensional Problems of Strip Yielding from Crack(s) 434 (30.3–30.25)
Two-Dimensional Problems of Strip Yielding from a Hole with or without Crack(s) 457 (31.1–31.5)
Three-Dimensional Strip Yielding Solutions 462 (32.1–32.6)

**Part VII**
**Crack(s) in a Shell** **469**

A Circumferential Crack in a Cylindrical Shell 470 (33.1–33.6)
Multiple Circumferential Cracks in a Cylindrical Shell 479 (34.1–34.4a)
A Longitudinal Crack in a Cylindrical Shell 485 (35.1)
A Crack in a Spherical Shell 486 (36.1)

**Appendices**
**A. Compliance Calibration Methods** 487 (A.1–A.6)
**B. A Method for Computing Certain Displacements Relevant to Crack Problems** 493 (B.1–B.4)
**C. The Weight Function Method for Determining Stress Intensity Factors** 497 (C.1–C.16)
**D. Anisotropic Linear-Elastic Crack-Tip Stress Fields** 513 (D.1–D.2)
**E. Stress Intensity Factors for Cracks in a Plate Subjected to Pinching Loads** 515 (E.1–E.14)
**F. Cracks in Residual Stress Fields** 529 (F.1–F.17)
**G. Westergaard Stress Functions for Dislocations and Cracks** 547 (G.1–G.33)
**H. The Plastic Zone Instability Concept Applied to Analysis of Pressure Vessel Failure** 581 (H.1–H.11)
**I. Approximations and Engineering Estimates of Stress Intensity Factors** 593 (I.1–I.18)
**J. Rice's *J*-Integral as an Analytical Tool in Stress Analysis** 611 (J.1–J.12)
**K. Elasto–Plastic Pure Shear Stress–Strain Analysis (Mode III)** 623 (K.1–K.12)
**L. Table of Complete Elliptic Integrals** 635 (L.1–L.2)
**M. Table and Properties of Gamma Function** 637 (M.1–M.3)

**References** 641 (R.1–R.21)
**Reference Index** 663
**Subject Index** 667
**Free Software (SmartCrack-Lite)** 676
**Software Guide** 677
