

The Structure of Groups of Prime Power Order

C. R. Leedham-Green and S. McKay

School of Mathematical Sciences

Queen Mary, University of London

OXFORD
UNIVERSITY PRESS

Contents

1	Preliminaries	
1.1	Commutators	1
1.2	Basic theory of finite p -groups	13
1.3	Local fields	18
2	New groups from old	
2.1	Group actions and extensions	25
2.2	Pull-backs and central products	30
2.3	Wreath products, imprimitivity and actions on trees	38
2.4	Iterated wreath products of C_p	47
3	p-groups of maximal class	
3.1	Definition and examples of p -groups of maximal class	52
3.2	The degree of commutativity of p -groups of maximal class	56
3.3	The power structure of p -groups of maximal class	59
3.4	Bounding the degree of commutativity	63
4	Finite p-groups acting uniserially	
4.1	Uniserial actions on finite p -groups	70
4.2	Wreath products and uniserial action	76
4.3	Uniserial action on finite abelian p -groups	85
4.4	The Sylow p -subgroups of $\mathrm{GL}(d, \mathbb{Z}/p^n\mathbb{Z})$	88
4.5	The maximal p -subgroups of $\mathrm{GL}(d, \mathbb{Z})$	91
5	Using Lie algebra theory to find bounds	
5.1	Preliminaries on Lie algebras	96
5.2	Jacobson's version of Engel's theorem	98
5.3	Application to p -groups of maximal class	101

5.4	Settled p -groups	102
5.5	Automorphisms with p fixed points	108
6	The proof of Conjecture A using powerful p-groups	
6.1	Powerful p -groups	113
6.2	Strongly hereditarily powerful subgroups	119
6.3	Application to p -groups of small coclass	123
6.4	Conjecture A	128
7	Pro-p-groups	
7.1	Topological groups	132
7.2	Pro-finite groups	136
7.3	Free groups	142
7.4	Pro- p -groups of finite coclass	145
8	Constructing finite p-groups	
8.1	Realizations and twistings	152
8.2	Constructing p -groups of maximal class	154
8.3	Twisting homomorphisms for p -groups of maximal class	159
8.4	Constructible p -groups	165
9	Homological algebra	
9.1	Derived functors	172
9.2	Double complexes and spectral sequences	182
9.3	Ext and Tor	192
9.4	The homology and cohomology of groups	196
9.5	Interpretations of group homology and cohomology	208
10	Uniserial p-adic space groups	
10.1	Primitive p -adic representations	219
10.2	The maximal irreducible p -subgroups of $\mathrm{GL}(d, \mathbb{Q}_p)$	231
10.3	Lattices for uniserial p -adic space groups	234
10.4	Embedding in a split space group	239
10.5	Bounding the coclass of uniserial 2-adic space groups	241

11	The structure of finite p-groups	
11.1	Properties of settled p -groups	251
11.2	Preliminary structure theorems and generic bounds	254
11.3	Structure theorems for p -groups of coclass r	258
11.4	Calculating the twisting homomorphisms	265
12	Beyond coclass	
12.1	Finiteness conditions on pro- p -groups	269
12.2	p -groups of rank 3, width 2 and obliquity 0	272
12.3	The Grigorchuk group	281
12.4	The Nottingham group	298
	Bibliography	318
	Symbol index	322
	Index	330
