Contents

Chapter 1 The Structure of Materials: Overview 1

| | |
|--|----|
| 1.1 Descriptors and Averaging | 3 |
| 1.2 Preliminary Concepts | 5 |
| 1.2.1 Symmetry | 5 |
| 1.2.2 Bonding | 11 |
| Types of Bonds | 12 |
| Structural Descriptors of Bonded Materials | 15 |
| Molecular Geometry | 17 |
| Polyatomic Covalently Bonded Molecules: Electron-Domain Theory | 18 |
| Shape Diversity in Large Molecules and Macromolecules | 20 |
| 1.2.3 Coordination Number | 22 |
| 1.2.4 Packing Fraction | 22 |
| 1.2.5 Order and Disorder | 23 |
| 1.3 Structure of Materials Roadmap | 25 |
| References | 28 |
| Additional Reading | 28 |
| Exercises | 28 |

Chapter 2 Noncrystalline State 31

- 2.1 Generic Descriptors 35
 - 2.1.1 Short-Range Order 35
 - 2.1.2 The Glass Transition and Free Volume 37
 - 2.1.3 Pair-Distribution Function 39
 - 2.1.4 Symmetry of Glass Structure and Physical Properties 43
- 2.2 Hard-Sphere Models 43
 - 2.2.1 Bernal's Random Close-Packed Sphere Model 44
 - 2.2.1 Voronoi Polyhedra 48
- 2.3 Random-Walk Models 51
 - 2.3.1 Brownian Motion and Diffusion 51
 - 2.3.2 Polymeric Glasses and Melts 56
 - Thermoplastics 57
 - Polymer Conformations 60
 - Polymer Composition, Architecture and Tacticity 61
- 2.4 Network Models 63
 - 2.4.1 Oxide Glasses 65
 - 2.4.2 Thermosetting Polymers 69
 - 2.4.3 Chalcogenide Glasses 72
 - Xerography: An Application of Noncrystalline Semiconductors 73
- 2.5 Fractal Models 74
 - 2.5.1 Dilation Symmetry and Fractal Dimension 74
 - 2.5.2 Ordered Fractals 76
 - 2.5.3 Irregular Fractals 77
 - 2.5.4 Diffusion-Limited Aggregation 77
 - 2.5.5 Fractals and Fracture 80
- References 80
- Additional Reading 81
- Exercises 81

Chapter 3 Crystalline State 89

- 3.1 The Crystallography of Two Dimensions 91
 - 3.1.1 Translational Symmetry 91
 - Lattices 91
 - Primitive Cells, Multiple Cells, and Unit Cells 93
 - Notation for Rational Points and Rational Lines 95
 - 3.1.2 Reflectional and Glide Symmetry 97

| | | |
|-------|--|-----|
| 3.1.3 | Rotational Symmetry | 99 |
| | Proper Rotation Axes | 99 |
| | Limitation of Rotational Symmetries in Crystals due to Translational Periodicity | 101 |
| 3.1.4 | Plane Point Groups | 103 |
| | Derivation of Plane Point Groups by Combining Reflections and Rotations | 103 |
| | General and Special Positions | 106 |
| | International and Schoenflies Symbols | 107 |
| 3.1.5 | The Five Distinct Plane Lattices | 108 |
| | Plane Lattice Nets Arising from Crystallographic Rotation Axes and Translations | 109 |
| | Lattice Nets Arising from Mirror Lines and Translations | 112 |
| 3.1.6 | Plane Groups | 114 |
| | Addition of Reflectional Symmetry to Plane Lattices | 116 |
| | The Seventeen Distinct Crystallographic Plane Groups | 117 |
| 3.1.7 | The International Tables for Crystallography: Plane Groups | 119 |
| | Symbols and Notation | 120 |
| | Description of Two-Dimensional Patterns by Crystallographic Data | 122 |
| | Generation of Two-Dimensional Patterns from Crystallographic Data | 124 |
| | Summary of Information Concerning Plane Groups | 126 |
| 3.2 | The Crystallography of Three Dimensions | 126 |
| 3.2.1 | Symmetry Operations Unique to Three Dimensions | 126 |
| | Inversion | 126 |
| | Rotoinversion | 127 |
| | Rotoreflexion | 129 |
| | Screw Axes | 130 |
| 3.2.2 | Techniques for Three-Dimensional Spatial Relationships | 135 |
| | Rational Intercept Plane: Miller Indices | 135 |
| | Direction Common to Two Planes, Zone Axes, Weiss Zone Law | 138 |
| | Spherical Trigonometry | 140 |
| | Stereographic Projection | 143 |
| 3.2.3 | Axial Combinations of Rotational Symmetries | 146 |
| | Simultaneous Rotational Symmetries | 146 |
| | Permissible Combinations of Rotational Axes in Three-Dimensional Crystals | 147 |
| 3.2.4 | The Thirty-Two Crystallographic Point Groups | 151 |
| | Decomposition of Improper Rotation Axes | 152 |

| | |
|--|-----|
| Derivation of Point Groups by Adding Extenders to Permissible Axial Combinations | 153 |
| Schoenflies Notation for the Crystallographic Point Groups | 158 |
| Laue Groups | 159 |
| 3.2.5 Space Lattices | 159 |
| Principles of Derivation by Stacking of Plane Lattices | 162 |
| The Fourteen Bravais Lattices and Six Crystal Systems | 166 |
| Conventional Unit Cells for the Crystal Lattices | 168 |
| 3.2.6 Space Groups | 170 |
| Glide Planes | 170 |
| Derivation Method for Space Groups | 172 |
| 3.2.7 The International Tables for Crystallography: Space Groups | 173 |
| 3.3 Symmetry Constraints on Material Properties | 179 |
| 3.3.1 Transformation of a Vector | 181 |
| 3.3.2 Transformation of a Tensor | 181 |
| 3.3.3 Tensor Properties of Crystals | 182 |
| 3.3.4 Symmetry Constraints | 185 |
| 3.4 Hard-Sphere Packing and Crystal Structure | 189 |
| 3.4.1 Close-Packed Structures | 191 |
| 3.4.2 Interstitial Sites in Close-Packed Structures | 194 |
| 3.4.3 Close Packing in Ionic Compounds | 195 |
| 3.5 Quasicrystals | 196 |
| 3.5.1 Aperiodic Tiling Patterns | 197 |
| 3.5.2 Icosahedral Structures in Crystals | 201 |
| References | 201 |
| Additional Reading | 202 |
| Exercises | 202 |

Chapter 4 Liquid-Crystalline State 213

| | |
|---|-----|
| 4.1 Structural Classes of Liquid Crystals | 218 |
| 4.1.1 Nematic Phase | 220 |
| 4.1.2 Twisted Nematic Phase | 221 |
| 4.1.3 Smectic Phase | 223 |
| 4.1.4 Columnar Phase | 226 |
| 4.2 Descriptors for Liquid Crystals | 227 |
| 4.2.1 Pair-Distribution Function | 227 |
| 4.2.2 Orientational Order Parameter | 228 |
| 4.2.3 Translational Order Parameter | 231 |

| | |
|---|-----|
| 4.3 Mesophase Texture and Identification of Liquid-Crystalline Phases | 233 |
| 4.4 Applications of Liquid Crystals | 233 |
| 4.4.1 Surfactants | 233 |
| 4.4.2 Liquid-Crystalline Fibers | 235 |
| 4.4.3 Liquid-Crystal Displays | 237 |
| 4.4.4 Next-Generation Flexible Liquid-Crystal Displays | 239 |
| 4.5 Plastic Crystals | 242 |
| References | 242 |
| Additional Reading | 243 |
| Exercises | 243 |

Chapter 5 Imperfections in Ordered Media 249

| | |
|---|-----|
| 5.1 Point Imperfections | 251 |
| 5.1.1 Vacancies | 251 |
| 5.1.2 Interstitials | 255 |
| 5.1.3 Point Imperfections in Molecular Crystals | 257 |
| 5.1.4 Mobility of Point Imperfections | 260 |
| 5.1.5 Solid Solutions | 260 |
| 5.1.6 Point Imperfections in Ionic Crystals | 263 |
| Kröger-Vink Notation | 264 |
| Schottky and Frenkel Imperfections | 265 |
| Imperfections Associated with Impurities | 267 |
| 5.2 Line Imperfections | 271 |
| 5.2.1 Dislocations | 273 |
| Evidence for Dislocations | 276 |
| Characterization of Dislocations: Tangent Vector and Burgers Vector | 280 |
| Dislocation Motion by Slip and Climb | 283 |
| Dislocation Loops | 287 |
| Slip Systems | 290 |
| Resolved Shear Stress on a Dislocation | 294 |
| Elastic Energy of Dislocations | 298 |
| Strengthening Mechanisms in Crystals | 298 |
| Generation of Dislocations | 304 |
| Dislocations in Columnar Crystals | 307 |
| 5.2.2 Disclinations | 307 |
| 5.3 Surface Imperfections | 313 |
| 5.3.1 Surface Tension and Surface Free Energy | 313 |

| | | |
|-------|--------------------------------------|-----|
| 5.3.2 | Geometry of Grain Structures | 316 |
| 5.3.3 | Equilibrium at Interfacial Junctions | 318 |
| 5.3.4 | Structure of Crystalline Interfaces | 321 |
| | Stacking Faults | 322 |
| | Antiphase Boundaries | 324 |
| | Grain Boundaries | 327 |
| | Interphase Grain Boundaries | 332 |
| | Grain Boundaries in Block Copolymers | 334 |
| | Magnetic Domain Walls | 335 |
| | Walls in Liquid Crystals | 339 |
| 5.4 | Imperfections and Symmetry Breaking | 340 |
| | References | 340 |
| | Additional Reading | 341 |
| | Exercises | 341 |

Chapter 6 Microstructure 349

| | | |
|-------|---|-----|
| 6.1 | Structural Hierarchies | 350 |
| 6.1.1 | Structural Hierarchy in a Metal Forging | 352 |
| 6.1.2 | Structural Hierarchy in a Semicrystalline Polymer | 354 |
| 6.2 | Microstructures Arising from Special Processing | 357 |
| 6.2.1 | Deformation Microstructures | 358 |
| | Deformation Processing and Crystallographic Texture | 358 |
| | Microstructures of Deformed Polycrystalline Materials | 359 |
| | Characterization of Textures: X-Ray Pole Figures | 361 |
| 6.2.2 | Transformation Microstructures | 364 |
| | Solidification Microstructures | 364 |
| | Solid-Solid Transformation Microstructures | 370 |
| | Composite Microstructures | 374 |
| 6.3 | Microstructural Case Studies | 379 |
| 6.3.1 | Nickel-Base Superalloys | 380 |
| 6.3.2 | Thermoset/Carbon-Fiber Composite Laminates | 385 |
| 6.4 | Where Do We Go From Here? | 389 |
| | References | 391 |
| | Additional Reading | 391 |
| | Exercises | 393 |
