CONTENTS

List of Symbols	xiii
Introduction	xv
1 Basic results on soluble and nilpotent groups	1
1.1 Definition and elementary properties of soluble groups Commutators and Commutator subgroups	1
1.2 Definition and elementary properties of nilpotent groups Stability groups, Fitting's Theorem and the Fitting subgroup Inheritance properties of the lower central series	4
1.3 Polycyclic groups Frattni subgroups Examples of polycyclic groups	14
1.4 Soluble groups with the minimal condition Constructing Černikov groups Nilpotent groups with min	23
1.5 Soluble groups with the minimal condition on normal subgroups	26
2 Nilpotent groups	29
2.1 Extraction of roots in nilpotent groups Embedding in radicable groups—the proof of Mal'cev's Theorem Uniqueness of the completion Extension to locally nilpotent groups	29
2.2 Basic commutators The collection process	34
2.3 The theory of isolators	38
3 Soluble linear groups	47
3.1 Mal'cev's Theorem Triangularizable, unitriangularizable, and diagonalizable groups	47
3.2 Soluble \mathbb{Z} -linear groups Torsion groups of automorphisms of Černikov groups	54
3.3 The linearity of polycyclic groups	57
4 The theory of finitely generated soluble groups I	60
4.1 Embedding in finitely generated soluble groups	60
4.2 The maximal condition on normal subgroups	62

4.3	Residual finiteness. The Artin–Rees Lemma	65
4.4	The Fitting and Frattini subgroups in finitely generated soluble groups	73
4.5	Counterexamples	77
4.6	Engel elements in soluble groups	81
5	Soluble groups of finite rank	83
5.1	The ranks of an abelian group	83
	Classes of soluble groups of finite rank	
	Weak maximal and minimal conditions	
5.2	Structure theorems for soluble groups of finite rank	90
	Polyrational groups	
	The Prüfer rank of a polyrational group	
	Chief factors and maximal subgroups	
5.3	Residual finiteness of soluble groups of finite rank	96
	Frattini subgroups of soluble minimax groups	
6	Finiteness conditions on abelian subgroups	105
6.1	Chain conditions on abelian subgroups	105
6.2	Finite rank conditions on abelian subgroups	109
6.3	Chain conditions on subnormal or ascendant abelian subgroups	113
7	The theory of finitely generated soluble groups II	121
7.1	Simple modules over polycyclic groups	121
7.2	Artin–Rees properties and residual finiteness	130
7.3	Frattini properties of finitely generated abelian-by-polycyclic groups	132
7.4	Just non-polycyclic groups	138
8	Centrality in finitely generated soluble groups	143
8.1	The centrality theorems	143
8.2	The Fan Out Lemma	146
8.3	Proofs of the main centrality theorems	149
8.4	Bryant’s verbal topology	155
8.5	Centrality in finitely generated abelian-by-polycyclic groups	156
9	Algorithmic theories of finitely generated soluble groups	158
9.1	The classical decision problems of group theory	158
	Negative results for finitely presented soluble groups	
9.2	Algorithms for polycyclic groups	162
	Polycyclic presentations	
	Virtually polycyclic subgroups of $GL_n(\mathbb{Z})$	

9.3	Algorithms for finitely generated soluble minimax groups	175
9.4	Submodule computability	178
9.5	Algorithms for finitely generated metabelian groups	185
	The conjugacy problem	
	Further algorithms	
10	Cohomological methods in infinite soluble group theory	191
10.1	The cohomology groups in group theory	191
	The Gruenberg Resolution	
	The homology of polycyclic groups	
	Group theoretic interpretations	
10.2	Soluble groups with finite (co)homological dimensions	203
10.3	Cohomological vanishing theorems for nilpotent groups	210
	Bounded (co)homology groups	
10.4	Applications to infinite soluble groups	220
	Nilpotent supplements	
	Nearly maximal subgroups	
	Complete abelian-by-nilpotent groups	
	Soluble products of polycyclic groups	
10.5	Kropholler's theorem on soluble minimax groups	229
11	Finitely presented soluble groups	240
11.1	Some finitely presented and infinitely presented soluble groups	240
11.2	Constructible soluble groups	245
	Structure of constructible soluble groups	
	Subgroups of constructible soluble groups	
11.3	Embedding in finitely presented metabelian groups	251
11.4	Structural properties of finitely presented soluble groups	256
	Application to coherent soluble groups	
	Finitely presented nilpotent-by-cyclic groups	
11.5	The Bieri–Strebel invariant	262
	Valuation spheres	
	Tame modules	
	Finitely presented centre-by-metabelian groups	
	Characterizing finitely presented metabelian groups	
12	Subnormality and solubility	275
12.1	Soluble groups and the subnormal intersection property	275
	Soluble groups with bounded subnormal defects	
12.2	Groups with every subgroup subnormal	279
	Reductions	
	The derived series	
12.3	Torsion-free groups with all subgroups subnormal—solubility	282

12.4 Torsion-free groups with all subgroups subnormal—nilpotence	285
12.5 Torsion groups with all subgroups subnormal—recent developments	287
