# The vibrational spectroscopy of polymers

**CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

## Preface

xiii

<b>1</b>	<b>Introduction</b>	1
1.1	Vibrational spectroscopy	1
	1.1.1 Molecular vibrations	1
	1.1.2 Infrared and Raman spectroscopy	1
1.2	Fundamentals of polymers	2
	1.2.1 Addition polymers	3
	1.2.2 Step growth polymers	4
	1.2.3 Regular chains and defect structures	7
	1.2.4 Polymer morphology and crystallization	12
1.3	The infrared and Raman spectra of polymers	14
1.4	The electromagnetic spectrum – symbols and units	17
1.5	Spectrometers and experimental methods in infrared spectroscopy	18
	1.5.1 Introduction	18
	1.5.2 The dispersive infrared spectrometer	21
	1.5.3 The Fourier transform spectrometer	24
	1.5.4 Sources, detectors and polarizers	27
	1.5.5 The preparation of samples for transmission spectroscopy	28
	1.5.6 Reflection spectroscopy	30
1.6	Spectrometers and experimental methods in Raman spectroscopy	31
	1.6.1 Introduction	31
	1.6.2 Sources and optical systems	33
	1.6.3 Monochromators and detectors	34
	1.6.4 Sample preparation and mounting	36
1.7	Mathematical techniques for processing spectra	38
1.8	Further reading	41
<b>2</b>	<b>Symmetry and normal modes of vibration</b>	42
2.1	Interatomic forces and molecular vibrations	42
	2.1.1 Interatomic forces	42
	2.1.2 Normal modes of vibration	44

2.2	Symmetry and small molecules	47
2.2.1	Point symmetry operations and symmetry elements	47
2.2.2	Point groups	53
2.3	Group representations	57
2.3.1	Representation of groups by matrices	57
2.3.2	Reducible, irreducible and equivalent representations	60
2.3.3	Symmetry species and character tables	63
2.3.4	Notation for symmetry species	65
2.4	The number of normal modes of each symmetry species	66
2.4.1	A reducible $3N$ -dimensional representation of the point group	67
2.4.2	Reduction of the $3N$ -dimensional representation by the use of normal coordinates	69
2.4.3	The number of normal modes of each symmetry species	70
2.5	Symmetry coordinates and internal coordinates	74
2.6	Further reading	78
<b>3</b>	<b>The vibrational modes of polymers</b>	80
3.1	The vibrations of regular polymer chains	80
3.1.1	Introduction	80
3.1.2	Line group and factor group: polyethylene	81
3.1.3	Polyethylene and the vinyl polymers: descent in symmetry	89
3.1.4	Helical molecules	93
3.2	The vibrations of polymer crystals	97
3.2.1	The nature of the factor group modes	98
3.2.2	Factor group modes for crystalline PVC and polyethylene	100
3.3	Further reading	106
<b>4</b>	<b>Infrared and Raman spectra</b>	107
4.1	Semiclassical treatment of origins of spectra	107
4.1.1	Polarizability tensors and dipole moments	107
4.1.2	Infrared absorption – mechanism and selection rule	109
4.1.3	The origin of Raman scattering	111
4.1.4	Raman scattering and the rule of mutual exclusion	113
4.1.5	Selection rules for Raman activity: Raman tensors	117

4.2	Polarization effects	120
4.2.1	Polarized infrared spectroscopy – dichroic ratios	120
4.2.2	Polarized Raman spectroscopy – depolarization ratios	122
4.3	Vibrational assignments	125
4.3.1	Introduction	125
4.3.2	Factor group analysis – chain or local symmetry	126
4.3.3	Group vibrations	131
4.3.4	Model compounds	134
4.3.5	Isotope substitution	134
4.4	Force fields and vibrational calculations	137
4.4.1	The vibrational problem in Cartesian coordinates	138
4.4.2	Generalized coordinates – the Wilson <b>G</b> and <b>F</b> matrices	139
4.4.3	Mass-weighted Cartesian coordinates and normal coordinates	141
4.4.4	The solution in principle; potential energy distributions	143
4.4.5	Symmetry coordinates and internal symmetry coordinates	145
4.4.6	Force fields and force constants	146
4.4.7	Application to polymers	150
4.5	Finite chains	156
4.6	Overtone and combination frequencies; Fermi resonance	158
4.7	Further reading	161
5	<b>The characterization of polymers</b>	162
5.1	Introduction	162
5.2	The interpretation of polymer spectra: factor group analysis	163
5.2.1	Polyethylene	163
5.2.2	Poly(vinyl chloride)	173
5.2.3	Poly(vinylidene chloride)	180
5.2.4	Polytetrafluoroethylene	185
5.2.5	Polystyrene	194
5.2.6	Poly(ethylene terephthalate)	200
5.3	The interpretation of polymer spectra: group frequencies	203
5.3.1	Introduction	203

5.3.2	Hydrocarbon polymers: polypropylene, polyisobutene	206
5.3.3	Polyesters: acetates, acrylates, methacrylates	208
5.3.4	Other oxygen-containing polymers: phenolic resins	210
5.3.5	Nitrogen-containing polymers: amides, polyurethanes	212
5.4	Quantitative analysis	215
5.4.1	Introduction	215
5.4.2	Copolymers of vinyl chloride or ethylene with vinyl acetate	217
5.4.3	Styrene/acrylonitrile copolymers and crosslinking in polystyrene	218
5.4.4	Polybutadienes and styrene/butadiene copolymers	218
5.5	Monomers and additives	219
5.5.1	Caprolactam in Nylon 6; monomer and water in poly(methyl methacrylate)	220
5.5.2	Additives in polyethylene and polypropylene	222
5.6	The characterization of oxidation and degradation	223
5.6.1	Hydrocarbon polymers: polyethylene, polypropylene	223
5.6.2	Resonance Raman studies of degradation in PVC	224
5.7	Further reading	226
<b>6</b>	<b>The microstructure of polymers</b>	227
6.1	The distribution of copolymerized units in the polymer chain	227
6.1.1	General principles	227
6.1.2	The determination of overall copolymer composition	228
6.1.3	The characterization of sequence lengths	231
6.2	Configurational and conformational isomerism	234
6.2.1	Introduction	234
6.2.2	Configurational isomerism: polypropylene	234
6.2.3	Conformational isomerism	238
6.3	Chain branching	246
6.3.1	Introduction	246
6.3.2	Polyethylene	246
6.3.3	Poly(vinyl chloride)	250
6.4	Head-to-head placements in vinyl polymers	250
6.5	End groups	251
6.5.1	Polyethylene	252

6.5.2	Vinyl polymers	254
6.5.3	Other polymers	255
6.6	Hydrogen bonding	256
6.6.1	Introduction	256
6.6.2	Polyamides	257
6.6.3	Polyurethanes	258
6.6.4	Biopolymers	262
6.7	Chain order and crystallinity	264
6.7.1	Introduction	264
6.7.2	Polyethylene	265
6.7.3	Polyoxymethylene	271
6.7.4	Poly(vinyl chloride)	274
6.7.5	Lattice modes in polyethylene and polytetrafluoroethylene	276
6.7.6	Differentiation between crystallinity and chain order	278
6.8	Chain folding in polyethylene	280
6.9	Longitudinal acoustic modes	286
6.10	Molecular orientation	292
6.10.1	Introduction	292
6.10.2	Theoretical background	293
6.10.3	Orientation in polyethylene and poly(ethylene terephthalate)	298
6.11	Further reading	301
