Mineola, New York

Contents

Introduction to the Dover Edition vii

Select Bibliography viii

Preface ix

1 Molecular Geometry 1

Atoms, Molecules, and Bonds, 1

Lewis Structures, 2

Ionic and Covalent Bonds and Electronegativity, 6

The VSEPR Model, 7

Polyhedra, 8

Bond Lengths and Other Bond Properties, 14

Isomers, 20

Dynamic Structures, 22

References and Suggested Reading, 24

2 The Determination of Molecular Geometry 25

X-ray Crystallography, 26

Neutron Diffraction, 29

Electron Diffraction, 29

Rotational Spectroscopy, 31

Vibrational Spectroscopy, 33

Dipole Moments, 34

Nuclear Magnetic Resonance, 35

Time Scales, 35

Equilibrium and Average Geometries, 36
Computational Techniques, 38
Sources of Data, 39
References and Suggested Reading, 39

3 The Valence-shell Electron-pair Repulsion Model 40

The Points-on-a-Sphere Model, 40
Molecular Shapes Based on Two to Six Valence-shell
Electron Pairs, 42
Electron-pair Domains, 44
The Spherical Electron-pair Domain Model, 44
Deviations from Ideal Bond Angles, 48
Trigonal Bipyramidal Molecules, 55
Molecular Shapes Based on Valence Shells with Seven,
Eight, and Nine Electron Pairs, 58
Limitations, 60
References and Suggested Reading, 61

4 The Second-period Elements 62

Beryllium, 64
Boron, 70
Carbon, 75
Nitrogen, 80
Oxygen, 87
Fluorine, 92
Hydrogen-bonded Complexes, 92
Bond Energies, Bond Lengths, and Multiple Bonds
in the Molecules of the Second-period Elements, 95
References and Suggested Reading, 97

5 The Main-group Elements of the Third and Subsequent Periods 98

Alkali and Alkaline Earth Metals, 99
Aluminum, Gallium, Indium, and Thallium, 103
Silicon, Germanium, Tin, and Lead, 109
Phosphorus, Arsenic, Antimony, and Bismuth, 121

Sulfur, Selenium, and Tellurium, 133
Chlorine, Bromine, and Iodine, 147
The Noble Gases, 153
References and Suggested Reading, 159

6 The Transition Metals 160

The Effect of d Electrons on Geometry, 160
Two Coordination, 166
Three Coordination, 169
Four Coordination, 171
Five Coordination, 178
Six Coordination, 185
Seven, Eight, and Nine Coordination, 190
References and Suggested Reading, 191

7 The Quantum Mechanical Basis of the VSEPR Model 192

Quantum Mechanical Bonding Models, 193
Electron Density Distributions, 202
The Laplacian of the Electron Density, 210
A Physical Basis for the VSEPR Model, 223
References and Suggested Reading, 227

Subject Index 228

Formula Index 236
