# Contents

Preface	vii
<b>Part 1 Basic Nuclear Structure</b>	<b>1</b>
<b>Chapter 1 Nuclear forces — a review</b>	<b>3</b>
1.1 Attractive . . . . .	3
1.2 Short-range . . . . .	3
1.3 Spin dependent . . . . .	4
1.4 Noncentral . . . . .	5
1.5 Charge independent . . . . .	5
1.6 Exchange character . . . . .	6
1.7 Hard core . . . . .	8
1.8 Spin-orbit force . . . . .	10
1.9 Summary . . . . .	10
1.10 Meson theory of nuclear forces . . . . .	10
<b>Chapter 2 Nuclear matter</b>	<b>13</b>
2.1 Nuclear radii and charge distributions . . . . .	13
2.2 The semiempirical mass formula . . . . .	15
2.3 Nuclear matter . . . . .	18
<b>Chapter 3 The independent-particle Fermi-gas model</b>	<b>20</b>
3.1 Isotopic spin . . . . .	20
3.2 Second quantization . . . . .	21
3.3 Variational estimate . . . . .	21
3.4 Single-particle potential . . . . .	24
<b>Chapter 4 The independent-pair approximation</b>	<b>26</b>
4.1 Bethe-Goldstone equation . . . . .	26

4.2	Effective mass approximation . . . . .	29
4.3	Solution for a nonsingular square well potential . . . . .	30
4.4	Solution for a pure hard core potential . . . . .	31
4.5	Justification of the independent-particle model . . . . .	35
4.6	Justification of the independent-pair approximation . . . . .	35
<b>Chapter 5 The shell model</b>		<b>36</b>
5.1	General canonical transformation to particles and holes . . . . .	36
5.2	Single-particle shell model . . . . .	40
5.3	Spin-orbit splitting . . . . .	43
<b>Chapter 6 The many-particle shell model</b>		<b>45</b>
6.1	Two valence particles: general interaction and $\delta^{(3)}(\mathbf{r})$ force . . . . .	45
6.2	Several particles: normal coupling . . . . .	49
6.3	The pairing-force problem . . . . .	50
<b>Chapter 7 Electromagnetic interactions</b>		<b>53</b>
7.1	Multipole analysis . . . . .	53
7.2	Photon in an arbitrary direction . . . . .	59
7.3	Transition probabilities and lifetimes . . . . .	62
7.4	Reduction of the multipole operators . . . . .	63
7.5	Static moments . . . . .	66
7.6	Electron scattering to discrete levels . . . . .	68
<b>Chapter 8 Electromagnetism and the shell model</b>		<b>71</b>
8.1	Extreme single-particle model . . . . .	71
8.2	Nuclear current operator . . . . .	76
8.3	Relativistic corrections to the current . . . . .	77
<b>Chapter 9 Excited states — equations of motion</b>		<b>81</b>
9.1	Tamm-Dancoff approximation (TDA) . . . . .	82
9.2	Random phase approximation (RPA) . . . . .	84
9.3	Reduction of the basis . . . . .	87
<b>Chapter 10 Collective modes — a simple model with <math>-g\delta^{(3)}(\mathbf{r})</math></b>		<b>91</b>
10.1	The [15] supermultiplet in TDA . . . . .	92
10.2	Random phase approximation (RPA) . . . . .	95
10.3	The [1] supermultiplet with $S = T = 0$ . . . . .	98
10.4	Application to nuclei . . . . .	99
<b>Chapter 11 Application to a real nucleus — <math>^{16}\text{O}</math></b>		<b>101</b>
<b>Chapter 12 Problems: Part 1</b>		<b>106</b>

<b>Part 2</b>	<b>The Relativistic Nuclear Many-Body Problem</b>	<b>115</b>
<b>Chapter 13</b>	<b>Why field theory</b>	<b>117</b>
<b>Chapter 14</b>	<b>A simple model with <math>(\phi, V_\mu)</math> and relativistic mean field theory</b>	<b>119</b>
14.1	A simple model . . . . .	119
14.2	Lagrangian . . . . .	120
14.3	Relativistic mean field theory (RMFT) . . . . .	121
14.4	Nuclear matter . . . . .	124
14.5	Neutron matter equation of state . . . . .	127
14.6	Neutron star mass vs. central density . . . . .	127
<b>Chapter 15</b>	<b>Extensions of relativistic mean field theory</b>	<b>129</b>
15.1	Relativistic Hartree theory of finite nuclei . . . . .	129
15.2	Nucleon scattering . . . . .	132
<b>Chapter 16</b>	<b>Quantum hadrodynamics (QHD-I)</b>	<b>136</b>
16.1	Motivation . . . . .	136
16.2	Feynman rules . . . . .	136
16.3	An application — relativistic Hartree approximation (RHA) . . . . .	139
<b>Chapter 17</b>	<b>Applications</b>	<b>143</b>
17.1	RPA calculation of collective excitations of closed-shell nuclei . . . . .	143
17.2	Electromagnetic interaction . . . . .	145
<b>Chapter 18</b>	<b>Some thermodynamics</b>	<b>152</b>
18.1	Relativistic mean field theory (RMFT) . . . . .	153
18.2	Numerical results . . . . .	155
18.3	Finite temperature field theory in QHD-I . . . . .	158
<b>Chapter 19</b>	<b>QCD and a phase transition</b>	<b>160</b>
19.1	Quarks and color . . . . .	160
19.2	Quantum chromodynamics (QCD) . . . . .	161
19.3	Properties of QCD . . . . .	163
19.4	Phase diagram of nuclear matter . . . . .	164
<b>Chapter 20</b>	<b>Pions</b>	<b>169</b>
20.1	Some general considerations . . . . .	169
20.2	Pseudoscalar coupling and $\sigma$ exchange . . . . .	170
20.3	Feynman rules for baryon, scalar, and pion contributions to $S_{fi}$ . . . . .	171
20.4	Particle-exchange poles . . . . .	172
20.5	Threshold behavior . . . . .	174
20.6	Decay rate for $\phi \rightarrow \pi + \pi$ . . . . .	176

<b>Chapter 21</b>	<b>Chiral invariance</b>	<b>178</b>
21.1	Isospin invariance — a review . . . . .	179
21.2	The chiral transformation . . . . .	181
21.3	Conserved axial current . . . . .	184
21.4	Generators of the chiral transformation . . . . .	186
<b>Chapter 22</b>	<b>The <math>\sigma</math>-model</b>	<b>187</b>
22.1	Spontaneous symmetry breaking . . . . .	188
<b>Chapter 23</b>	<b>Dynamic resonances</b>	<b>195</b>
23.1	A low-mass scalar . . . . .	196
23.2	The $\Delta(1232)$ . . . . .	201
<b>Chapter 24</b>	<b>Effective field theory</b>	<b>207</b>
24.1	Model hadronic field theories – revisited . . . . .	207
24.2	Spontaneously broken chiral symmetry – revisited . . . . .	209
24.3	Effective field theory . . . . .	212
24.4	Effective lagrangian for QCD . . . . .	215
24.5	Effective lagrangian and currents . . . . .	218
24.6	RMFT and density functional theory . . . . .	219
24.7	Parameters and naturalness . . . . .	220
24.8	An application . . . . .	222
24.9	Pions – revisited . . . . .	224
<b>Chapter 25</b>	<b>Density functional theory — an overview</b>	<b>226</b>
<b>Chapter 26</b>	<b>Problems: Part 2</b>	<b>231</b>
<b>Part 3</b>	<b>Strong-Coupling QCD</b>	<b>245</b>
<b>Chapter 27</b>	<b>QCD — a review</b>	<b>247</b>
27.1	Yang-Mills theory — a review . . . . .	247
27.2	Quarks and color . . . . .	252
27.3	Confinement . . . . .	256
27.4	Asymptotic freedom . . . . .	257
<b>Chapter 28</b>	<b>Path integrals</b>	<b>259</b>
28.1	Propagator and the path integral . . . . .	259
28.2	Partition function and the path integral . . . . .	261
28.3	Many degrees of freedom and continuum mechanics . . . . .	266
28.4	Field theory . . . . .	267
28.5	Relativistic quantum field theory . . . . .	268

<b>Chapter 29</b>	<b>Lattice gauge theory</b>	<b>271</b>
29.1	Some preliminaries . . . . .	271
29.2	QED in one space and one time dimension . . . . .	273
29.3	Lattice gauge theory . . . . .	274
29.4	Summary . . . . .	281
<b>Chapter 30</b>	<b>Mean field theory</b>	<b>283</b>
30.1	Counting . . . . .	283
30.2	Ising model — review . . . . .	284
30.3	Mean field theory (MFT) . . . . .	285
30.4	Lattice gauge theory for QED in MFT . . . . .	288
30.5	An extension . . . . .	292
30.6	Some observations . . . . .	295
<b>Chapter 31</b>	<b>Nonabelian theory — SU(2)</b>	<b>296</b>
31.1	Internal space . . . . .	296
31.2	Gauge invariance . . . . .	298
31.3	Continuum limit . . . . .	300
31.4	Gauge-invariant measure . . . . .	303
31.5	Summary . . . . .	306
<b>Chapter 32</b>	<b>Mean field theory — SU(n)</b>	<b>308</b>
32.1	Mean-field approach . . . . .	309
32.2	Evaluation of required integrals for SU(2) . . . . .	313
<b>Chapter 33</b>	<b>Observables in LGT</b>	<b>316</b>
33.1	The $(\bar{l}l)$ interaction in QED . . . . .	316
33.2	Interpretation as a $V_{\bar{l}l}(R)$ potential . . . . .	319
33.3	Nonabelian theory . . . . .	320
33.4	Confinement . . . . .	321
33.5	Continuum limit . . . . .	322
33.6	Results for $V_{\bar{q}q}$ . . . . .	325
33.7	Determination of the glueball mass . . . . .	326
<b>Chapter 34</b>	<b>Strong-coupling limit</b>	<b>329</b>
34.1	Nonabelian theory . . . . .	332
34.2	Basic observation . . . . .	333
34.3	Strong-coupling limit ( $\sigma \rightarrow 0$ ) . . . . .	334
34.4	Strong-coupling SU(2) . . . . .	337
34.5	Strong-coupling SU(3) . . . . .	337
34.6	Strong-coupling U(1) . . . . .	338
<b>Chapter 35</b>	<b>Monte Carlo calculations</b>	<b>339</b>
35.1	Mean values . . . . .	339

35.2	Monte Carlo evaluation of an integral . . . . .	342
35.3	Importance sampling . . . . .	344
35.4	Markov chains . . . . .	346
35.5	The Metropolis algorithm . . . . .	348
<b>Chapter 36 Include fermions</b>		<b>351</b>
36.1	Fermions in U(1) lattice gauge theory . . . . .	352
36.2	Gauge invariance . . . . .	354
36.3	Continuum limit . . . . .	354
36.4	Path integrals . . . . .	355
36.5	Problem — fermion doubling . . . . .	356
36.6	Possible solution to the problem of fermion doubling . . . . .	358
36.7	Chiral symmetry on the lattice . . . . .	359
<b>Chapter 37 QCD-inspired models</b>		<b>361</b>
37.1	Bag model . . . . .	361
37.2	Quark model state vectors . . . . .	369
37.3	Matrix elements . . . . .	373
37.4	Transition magnetic moment . . . . .	375
37.5	Axial-vector current . . . . .	377
37.6	Large $N_C$ limit of QCD . . . . .	378
<b>Chapter 38 Deep-inelastic scattering</b>		<b>382</b>
38.1	General analysis . . . . .	382
38.2	Bjorken scaling . . . . .	387
38.3	Quark-parton model . . . . .	388
38.4	Momentum sum rule . . . . .	395
38.5	EMC effect . . . . .	395
<b>Chapter 39 Evolution equations</b>		<b>398</b>
39.1	Evolution equations in QED . . . . .	399
39.2	Splitting functions . . . . .	403
39.3	Weizsäcker-Williams approximation . . . . .	404
39.4	QCD — Altarelli-Parisi equations . . . . .	406
<b>Chapter 40 Heavy-ion reactions and the quark-gluon plasma</b>		<b>409</b>
40.1	The quark gluon plasma . . . . .	409
40.2	Relativistic heavy ions . . . . .	411
40.3	Transport theory . . . . .	413
40.4	Summary . . . . .	419
<b>Chapter 41 Problems: Part 3</b>		<b>421</b>

<b>Part 4 Electroweak Interactions with Nuclei</b>	<b>429</b>
<b>Chapter 42 Weak interaction phenomenology</b>	<b>431</b>
42.1 Lepton fields . . . . .	431
42.2 $V - A$ theory . . . . .	431
42.3 $\beta$ -decay interaction . . . . .	433
42.4 Leptons . . . . .	433
42.5 Current-current theory . . . . .	433
42.6 $\mu$ -decay . . . . .	435
42.7 Conserved vector current theory (CVC) . . . . .	436
42.8 Intermediate vector bosons . . . . .	437
42.9 Neutral currents . . . . .	439
42.10 Single-nucleon matrix elements of the currents . . . . .	440
42.11 Pion decay . . . . .	442
42.12 Pion-pole dominance of the induced pseudoscalar coupling . . . . .	443
42.13 Goldberger-Treiman relation . . . . .	444
<b>Chapter 43 Introduction to the standard model</b>	<b>446</b>
43.1 Spinor fields . . . . .	446
43.2 Leptons . . . . .	446
43.3 Point nucleons . . . . .	448
43.4 Weak hypercharge . . . . .	448
43.5 Local gauge symmetry . . . . .	449
43.6 Vector meson masses . . . . .	450
43.7 Spontaneous symmetry breaking . . . . .	451
43.8 Particle content . . . . .	455
43.9 Lagrangian . . . . .	455
43.10 Effective low-energy lagrangian . . . . .	456
43.11 Fermion mass . . . . .	457
<b>Chapter 44 Quarks in the standard model</b>	<b>460</b>
44.1 Weak multiplets . . . . .	460
44.2 GIM identity . . . . .	461
44.3 Covariant derivative . . . . .	461
44.4 Electroweak quark currents . . . . .	462
44.5 QCD . . . . .	463
44.6 Symmetry group . . . . .	463
44.7 Nuclear currents . . . . .	464
44.8 Nuclear domain . . . . .	464
<b>Chapter 45 Weak interactions with nuclei</b>	<b>466</b>
45.1 Multipole analysis . . . . .	466
45.2 Nuclear current operator . . . . .	471

45.3	Long-wavelength reduction . . . . .	474
45.4	Example – “allowed” processes . . . . .	475
45.5	The relativistic nuclear many-body problem . . . . .	476
45.6	Summary . . . . .	478
<b>Chapter 46 Semileptonic weak processes</b>		<b>479</b>
46.1	Neutrino reactions . . . . .	479
46.2	Charged lepton (muon) capture . . . . .	484
46.3	$\beta$ -decay . . . . .	489
46.4	Final-state Coulomb interaction . . . . .	492
46.5	Slow nucleons . . . . .	492
<b>Chapter 47 Some applications</b>		<b>494</b>
47.1	One-body operators . . . . .	494
47.2	Unified analysis of electroweak interactions with nuclei . . . . .	495
47.3	Applications . . . . .	495
47.4	Some predictions for new processes . . . . .	504
47.5	Variation with weak coupling constants . . . . .	506
47.6	The relativistic nuclear many-body problem . . . . .	508
47.7	Effective field theory . . . . .	510
<b>Chapter 48 Full quark sector of the standard model</b>		<b>513</b>
48.1	Quark mixing in the electroweak interactions: two-families — a review	513
48.2	Extension to three families of quarks . . . . .	515
48.3	Feynman rules in the quark sector . . . . .	516
<b>Chapter 49 Neutrinos</b>		<b>518</b>
49.1	Some background . . . . .	518
49.2	Solar neutrinos . . . . .	520
49.3	Neutrino mixing . . . . .	521
49.4	Some experimental results . . . . .	524
<b>Chapter 50 Electron scattering</b>		<b>527</b>
50.1	Cross section . . . . .	527
50.2	General analysis . . . . .	528
50.3	Parity violation in $(\vec{e}, e')$ . . . . .	531
50.4	Cross sections . . . . .	533
50.5	An example — $(\vec{e}, e)$ from a $0^+$ target . . . . .	536
<b>Chapter 51 Problems: Part 4</b>		<b>539</b>

<b>Part 5</b>	<b>Appendices</b>	<b>547</b>
<b>Appendix A</b>	<b>Part 1</b>	<b>549</b>
A.1	Meson exchange potentials . . . . .	549
A.2	$b_{\alpha}^{\dagger}$ is a rank- $j$ irreducible tensor operator . . . . .	551
<b>Appendix B</b>	<b>Part 2</b>	<b>553</b>
B.1	Pressure in MFT . . . . .	553
B.2	Thermodynamic potential and equation of state . . . . .	554
B.3	$\pi$ - $N$ scattering . . . . .	556
B.4	The symmetry $SU(2)_L \otimes SU(2)_R$ . . . . .	558
B.5	$\pi$ - $\pi$ scattering . . . . .	560
B.6	Chiral transformation properties . . . . .	562
<b>Appendix C</b>	<b>Part 3</b>	<b>565</b>
C.1	Peierls' inequality . . . . .	565
C.2	Symmetric $(T, S) = (\frac{1}{2}, \frac{1}{2})$ state . . . . .	566
C.3	Sum rules . . . . .	568
<b>Appendix D</b>	<b>Part 4</b>	<b>569</b>
D.1	Standard model currents . . . . .	569
D.2	Metric and convention conversion tables . . . . .	573
D.3	Units and conventions . . . . .	573
	Bibliography	578
	Index	593
