CONTENTS

1	**Introduction**	**1**
	The Fourier Series	3
	The Fourier Transform	11
	The Impulse Function	17
	Summary	19
	Problems	19
	Bibliography	20
2	**Basic Mathematical Background**	**21**
	Fundamental Set Theory	21
	Set Algebra	22
	Laws of Internal Composition	25
	Special Elements of a Set	27
	Groups, Fields, and Vector Spaces	28
	Functions, Relations, and Sequences	32
	Distance and Metric Spaces	35
	Concept of Order	37
	Concepts from Topology	39
	Limits and Continuity	40
	Convergence of Sequences	43
	Choice of a Norm for Convergence	44
	Cauchy Convergence	47
	Summary	48
	Problems	48
	Bibliography	50

3 Integration Theory 51

Lebesgue Measure 51
Step Functions and Their Integrals 54
Lebesgue Functions 57
Riemann and Lebesgue Integrals 64
Convergence of Sequences of Lebesgue Integral Functions 65
Lebesgue Functions on an Unbounded Interval 69
Integral Functions 72
Square-Summable Functions 76
Summary 78
Problems 79
Bibliography 80

4 Distribution Theory 81

Inner Product of Two Functions 81
Existence of the Inner Product 83
Definition of a Distribution 85
Properties of Distributions 87
The Comb Distribution 89
Derivative of a Distribution 91
Odd and Even Distributions 94
The Delta Distribution: An Intuitive Approach 94
Summary 97
Problems 98
Bibliography 99

5 The Fourier Series 101

General System of Orthogonal Functions 103
Minimum Mean Square Error 104
Bessel's Inequality and Convergence in the Mean 106
Properties of Complete Systems 108
Trigonometric System of Orthogonal Functions 110
Complex Exponential System of Orthogonal Functions 115
The Riemann Lebesgue Lemma 116
The Dirichlet Kernel Function 117
Pointwise Convergence of the Fourier Series 121
Gibbs' Phenomenon 125
Fourier Series Representation of Complex Functions 130
Properties of the Fourier Series 131
Examples 138
Summary 149
Problems 149
Bibliography 151

6 The Fourier Transform **153**

Existence of the Fourier Transform 154
Properties and Behavior of the Fourier Transform 159
The Shifting Theorems 163
The Derivative Theorems 170
Transform of a Transform 173
Symmetry Considerations 174
Uniqueness and Reciprocity 178
Convolution of Two Functions 181
Correlation 193
Self-Reciprocity and the Hermite Functions 198
Summary 202
Problems 203
Bibliography 205

7 Fourier Transform of a Distribution **207**

Linearity and Scale Change 210
The Shifting Theorems 211
The Derivative Theorems 214
Symmetry Considerations 219
Fourier Transform of the Comb Distribution 221
Convolution of Distributions 224
Physical Interpretation of Convolution 227
Fourier Transform of a Periodic Function: The Fourier Series 230
Summary 232
Problems 233
Bibliography 234

8 The Discrete Fourier Transform **235**

*N*th-Order Sequences 235
The Discrete Fourier Transform 237
Properties of the Discrete Fourier Transform 243
Symmetry Relations 253
Convolution of Two Sequences 257
Simultaneous Calculation of Real Transforms 260
The Fast Fourier Transform 263
Summary 266
Problems 266
Bibliography 267

9 Sampling Theory **269**

Sampling a Function 270
Aliasing 273

Computer Calculation of the Fourier Transform 274
Computer-Generated Fourier Series 280
Super-Gaussian Windows 282
Summary 293
Problems 294
Bibliography 295

Appendix: Fourier Transform FORTRAN Subroutine 297

Index 303
