CONTENTS

§ 9. Invariant Metric and Invariant Measure on Lie Groups ........................................ 109
§ 10. Comments and Supplements ................................................................. 111
§ 11. Exercises ......................................................................................... 114

CHAPTER 4
HOMOGENEOUS AND SYMMETRIC SPACES
§ 1. Homogeneous Spaces ........................................................................... 123
§ 2. Symmetric Spaces ............................................................................... 124
§ 3. Invariant and Quasi-Invariant Measures on Homogeneous Spaces ......... 128
§ 4. Comments and Supplements ................................................................. 132
§ 5. Exercises ......................................................................................... 132

CHAPTER 5
GROUP REPRESENTATIONS
§ 1. Basic Concepts .................................................................................. 134
§ 2. Equivalence of Representations .......................................................... 139
§ 3. Irreducibility and Reducibility .............................................................. 141
§ 4. Cyclic Representations ......................................................................... 145
§ 5. Tensor Product of Representations ...................................................... 147
§ 6. Direct Integral Decomposition of Unitary Representations ............... 150
§ 7. Comments and Supplements ................................................................. 156
§ 8. Exercises ......................................................................................... 156

CHAPTER 6
REPRESENTATIONS OF COMMUTATIVE GROUPS
§ 1. Irreducible Representations and Characters ....................................... 159
§ 2. Stone and SNAG Theorems .................................................................. 160
§ 3. Comments and Supplements ................................................................. 163
§ 4. Exercises ......................................................................................... 164

CHAPTER 7
REPRESENTATIONS OF COMPACT GROUPS
§ 1. Basic Properties of Representations of Compact Groups ................. 166
§ 2. Peter–Weyl and Weyl Approximation Theorems .................................. 172
§ 3. Projection Operators and Irreducible Representations ...................... 177
§ 4. Applications ...................................................................................... 179
§ 5. Representations of Finite Groups ........................................................ 186
§ 6. Comments and Supplements ................................................................. 195
§ 7. Exercises ......................................................................................... 197

CHAPTER 8
FINITE-DIMENSIONAL REPRESENTATIONS OF LIE GROUPS
§ 1. General Properties of Representations of Solvable and Semisimple Lie Groups ......................................................... 199
<table>
