Contents

1	Introduction	1
1.1	Historical outline of the study of optical processes	1
1.2	Semiconductor optoelectronics: present and future	2
1.3	Semiconductor optoelectronics: systems applications	4
1.4	Semiconductor materials for optoelectronics	6
1.5	Optical processes and their applications	7
2	Classical theory of optical processes	9
2.1	Introduction	9
2.2	Macroscopic theory of absorption	9
2.3	Light absorption in a medium: macroscopic theory	11
2.4	Index of refraction in a conducting medium	13
2.5	Classical theory of susceptibility	14
2.6	Basic interaction between light and matter:	
	Einstein's coefficients	19
	Problems	25
	Further reading and references	27
3	Photons	28
3.1	Introduction	28
3.2	Wave equation in a rectangular cavity	28
3.3	Quantization of the radiation field	31
3.4	Time-dependent perturbation theory	37
3.5	Interaction of an electron with the electromagnetic field	38
3.6	Second-order perturbation theory	44
	Problems	44
	Further reading	46
4	Electron band structure and its modifications	47
4.1	Introduction	47
4.2	Band theory: Bloch functions	48
4.3	The $k \cdot p$ perturbation theory neglecting spin	49
4.4	Spin-orbit interaction	53
4.5	Band structure of some important semiconductors	63
4.6	Alloys	66
4.7	Heterojunctions	71

12.5	Parabolic QWs	294
12.6	Absorption in an indirect gap QW	295
12.7	Intersubband absorption	298
12.8	Non-radiative recombination	305
	Problems	310
	Further reading and references	312
13	Excitons and impurities in quantum wells	314
13.1	Introduction	314
13.2	Excitons in purely 2D systems	316
13.3	Binding energy in quasi-2D systems	321
13.4	Expression for the absorption coefficient	326
13.5	Linewidth of excitonic absorption	330
13.6	Exciton recombination	336
13.7	Exciton absorption in an indirect gap QW	337
13.8	Impurities in QWs	339
	Problems	340
	Further reading and references	341
14	Optical processes in quantum wires and dots	343
14.1	Introduction	343
14.2	1D systems: quantum wires	343
14.3	Interband absorption in quantum wires	347
14.4	Excitonic absorption in 1D	349
14.5	Zero-dimensional systems	352
14.6	Absorption and gain in 0D systems	355
14.7	Excitons in quantum dots and nanocrystals	358
	Problems	359
	Further reading and references	360
15	Superlattices	361
15.1	Introduction	361
15.2	Miniband structure and envelope functions	361
15.3	Interband absorption	372
15.4	Interminiband transitions	374
15.5	Excitons in superlattices	376
15.6	Doping superlattices	380
15.7	Short-period superlattices	383
	Problems	385
	Further reading and references	386
16	Strained layers	388
16.1	Introduction	388
16.2	Critical thickness	389

16.3 Strain-induced band structure	393
16.4 Absorption and gain in strained QWs	399
16.5 Excitonic processes	406
16.6 Strained layer superlattices	406
16.7 Special material systems	407
Problems	410
Further reading and references	411
17 Effects of electric field on low-dimensional systems	412
17.1 Introduction	412
17.2 Field perpendicular to QW layer	412
17.3 Intersubband absorption under normal field	417
17.4 Excitonic effects	419
17.5 Electric field effects in superlattices	425
17.6 Type II to type I crossover	431
17.7 Internal piezoelectric field in strained layers	432
17.8 Coupled double quantum wells	433
Problems	435
Further reading and references	436
Index	439
