Contents

<i>Preface</i>	xiii
<i>Introduction</i>	xv

PART I ESSENTIALS OF NONLINEAR DYNAMICS	1
1 Nonlinear mappings	1
1.1 Maps and trajectories	1
1.2 Attractors	2
1.3 The logistic map	4
1.4 Maps of Kaplan–Yorke type	11
1.5 The Hénon map	14
1.6 The standard map	16
2 Probability in the theory of chaotic systems	20
2.1 Relative frequencies and probability	20
2.2 Invariant densities	22
2.3 Topological conjugation	28
3 Symbolic dynamics	32
3.1 Partitions of the phase space	32
3.2 The binary shift map	33
3.3 Generating partition	35
3.4 Symbolic dynamics of the logistic map	37
3.5 Cylinders	39
3.6 Symbolic stochastic processes	40

PART II ESSENTIALS OF INFORMATION THEORY AND THERMODYNAMICS	44
4 The Shannon information	44
4.1 Bit-numbers	44
4.2 The Shannon information measure	46
*4.3 The Khinchin axioms	47
5 Further information measures	50
5.1 The Rényi information	50
5.2 The information gain	51
*5.3 General properties of the Rényi information	53
6 Generalized canonical distributions	56
6.1 The maximum entropy principle	56
6.2 The thermodynamic equilibrium ensembles	59
6.3 The principle of minimum free energy	61
*6.4 Arbitrary <i>a priori</i> probabilities	63
7 The fundamental thermodynamic relations	65
7.1 The Legendre transformation	65
7.2 Gibbs' fundamental equation	68
*7.3 The Gibbs–Duhem equation	71
7.4 Susceptibilities and fluctuations	73
7.5 Phase transitions	75
8 Spin systems	78
8.1 Various types of spin models	78
8.2 Phase transitions of spin systems	82
8.3 Equivalence between one-dimensional spin systems and symbolic stochastic processes	83
8.4 The transfer matrix method	85
 PART III THERMOSTATISTICS OF MULTIFRACTALS	 88
9 Escort distributions	88
9.1 Temperature in chaos theory	88
9.2 Two or more intensities	90
*9.3 Escort distributions for general test functions	91

10	Fractals	94
10.1	Simple examples of fractals	94
10.2	The fractal dimension	97
10.3	The Hausdorff dimension	100
10.4	Mandelbrot and Julia sets	102
*10.5	Iterated function systems	109
11	Multifractals	114
11.1	The grid of boxes of equal size	114
11.2	The Rényi dimensions	115
11.3	Thermodynamic relations in the limit of box size going to zero	117
11.4	Definition of the Rényi dimensions for cells of variable size	123
*12	Bit-cumulants in multifractal statistics	127
12.1	Moments and cumulants of bit-numbers	127
12.2	The bit-variance in thermodynamics	129
12.3	The sensitivity to correlations	131
12.4	Heat capacity of a fractal distribution	132
*13	Thermodynamics of finite volume	136
13.1	Boxes of finite size	136
13.2	Thermodynamic potentials for finite volume	139
13.3	An analytically solvable example	143
PART IV DYNAMICAL ANALYSIS OF CHAOTIC SYSTEMS		146
14	Statistics of dynamical symbol sequences	146
14.1	The Kolmogorov-Sinai entropy	146
14.2	The Rényi entropies	149
14.3	Equivalence with spin systems	155
14.4	Spectra of dynamical scaling indices	156
15	Expansion rate and information loss	158
15.1	Expansion of one-dimensional systems	158
15.2	The information loss	160
*15.3	The variance of the loss	161
15.4	Spectra of local Liapunov exponents	164
15.5	Liapunov exponents for higher-dimensional systems	167
15.6	Stable and unstable manifolds	172

16	The topological pressure	178
16.1	Definition of the topological pressure	178
16.2	Length scale interpretation	182
16.3	Examples	184
*16.4	Extension to higher dimensions	187
*16.5	Topological pressure for arbitrary test functions	188
17	Transfer operator methods	190
17.1	The Perron–Frobenius operator	190
17.2	Invariant densities as fixed points of the Perron–Frobenius operator	193
17.3	Spectrum of the Perron–Frobenius operator	196
17.4	Generalized Perron–Frobenius operator and topological pressure	197
*17.5	Connection with the transfer matrix method of classical statistical mechanics	199
18	Repellers and escape	204
18.1	Repellers	204
18.2	Escape rate	207
*18.3	The Feigenbaum attractor as a repeller	208
PART V	ADVANCED THERMODYNAMICS	211
19	Thermodynamics of expanding maps	211
19.1	A variational principle for the topological pressure	211
19.2	Gibbs measures and SRB measures	214
19.3	Relations between topological pressure and the Rényi entropies	218
19.4	Relations between topological pressure and the generalized Liapunov exponents	221
19.5	Relations between topological pressure and the Rényi dimensions	222
20	Thermodynamics with several intensive parameters	226
20.1	The pressure ensemble	226
*20.2	Equation of state of a chaotic system	229
20.3	The grand canonical ensemble	233
20.4	Zeta functions	237
*20.5	Partition functions with conditional probabilities	240

21	Phase transitions	243
21.1	Static phase transitions	243
21.2	Dynamical phase transitions	248
21.3	Expansion phase transitions	251
21.4	Bivariate phase transitions	254
*21.5	Phase transitions with respect to the volume	256
21.6	External phase transitions of second order	260
*21.7	Renormalization group approach	262
21.8	External phase transitions of first order	267
