

Michal Fečkan

Topological Degree Approach to Bifurcation Problems

Springer

Contents

1	Introduction	1
1.1	Preface	1
1.2	An Illustrative Perturbed Problem	1
1.3	A Brief Summary of the Book	5
2	Theoretical Background	7
2.1	Linear Functional Analysis	7
2.2	Nonlinear Functional Analysis	8
2.2.1	Implicit Function Theorem	8
2.2.2	Lyapunov-Schmidt Method	9
2.2.3	Leray-Schauder Degree	9
2.3	Differential Topology	11
2.3.1	Differentiable Manifolds	11
2.3.2	Symplectic Surfaces	12
2.3.3	Intersection Numbers of Manifolds	12
2.3.4	Brouwer Degree on Manifolds	13
2.3.5	Vector Bundles	13
2.3.6	Euler Characteristic	14
2.4	Multivalued Mappings	14
2.4.1	Upper Semicontinuity	14
2.4.2	Measurable Selections	15
2.4.3	Degree Theory for Set-Valued Maps	15
2.5	Dynamical Systems	16
2.5.1	Exponential Dichotomies	16
2.5.2	Chaos in Discrete Dynamical Systems	16
2.5.3	Periodic O.D.Eqns	18
2.5.4	Vector Fields	18
2.6	Center Manifolds for Infinite Dimensions	20
3	Bifurcation of Periodic Solutions	23
3.1	Bifurcation of Periodics from Homoclinics I	23
3.1.1	Discontinuous O.D.Eqns	23
3.1.2	The Linearized Equation	25
3.1.3	Subharmonics for Regular Periodic Perturbations	32
3.1.4	Subharmonics for Singular Periodic Perturbations	40

3.1.5	Subharmonics for Regular Autonomous Perturbations . . .	43
3.1.6	Applications to Discontinuous O.D.Eqns	44
3.1.7	Bounded Solutions Close to Homoclinics	53
3.2	Bifurcation of Periodics from Homoclinics II	54
3.2.1	Singular Discontinuous O.D.Eqns	54
3.2.2	Linearized Equations	57
3.2.3	Bifurcation of Subharmonics	60
3.2.4	Applications to Singular Discontinuous O.D.Eqns	70
3.3	Bifurcation of Periodics from Periodics	75
3.3.1	Discontinuous O.D.Eqns	75
3.3.2	Linearized Problem	77
3.3.3	Bifurcation of Periodics in Nonautonomous Systems	82
3.3.4	Bifurcation of Periodics in Autonomous Systems	85
3.3.5	Applications to Discontinuous O.D.Eqns	90
3.3.6	Concluding Remarks	96
3.4	Bifurcation of Periodics in Relay Systems	97
3.4.1	Systems with Relay Hysteresis	97
3.4.2	Bifurcation of Periodics	98
3.4.3	Third-Order O.D.Eqns with Small Relay Hysteresis	103
3.5	Nonlinear Oscillators with Weak Couplings	107
3.5.1	Weakly Coupled Systems	107
3.5.2	Forced Oscillations from Single Periodics	108
3.5.3	Forced Oscillations from Families of Periodics	111
3.5.4	Applications to Weakly Coupled Nonlinear Oscillators	113
4	Bifurcation of Chaotic Solutions	121
4.1	Chaotic Differential Inclusions	121
4.1.1	Nonautonomous Discontinuous O.D.Eqns	121
4.1.2	The Linearized Equation	122
4.1.3	Bifurcation of Chaotic Solutions	125
4.1.4	Chaos from Homoclinic Manifolds	128
4.1.5	Almost and Quasi Periodic Discontinuous O.D.Eqns	129
4.2	Chaos in Periodic Differential Inclusions	135
4.2.1	Regular Periodic Perturbations	135
4.2.2	Singular Differential Inclusions	138
4.3	More About Homoclinic Bifurcations	139
4.3.1	Transversal Homoclinic Crossing Discontinuity	139
4.3.2	Homoclinic Sliding on Discontinuity	140
5	Topological Transversality	143
5.1	Topological Transversality and Chaos	143
5.1.1	Topologically Transversal Invariant Sets	143
5.1.2	Difference Boundary Value Problems	146
5.1.3	Chaotic Orbits	151
5.1.4	Periodic Points and Extensions on Invariant Compact Subsets	156
5.1.5	Perturbed Topological Transversality	157

5.2	Topological Transversality and Reversibility	164
5.2.1	Period Blow-Up	164
5.2.2	Period Blow-Up for Reversible Diffeomorphisms	165
5.2.3	Perturbed Period Blow-Up	168
5.2.4	Perturbed Second Order O.D.Eqns	172
5.3	Chains of Reversible Oscillators	176
5.3.1	Homoclinic Period Blow-Up for Breathers	177
5.3.2	Heteroclinic Period Blow-Up for Non-breathers	178
5.3.3	Period Blow-Up for Traveling Waves	181
6	Traveling Waves on Lattices	183
6.1	Traveling Waves in Discretized P.D.Eqns	183
6.2	Center Manifold Reduction	185
6.3	A Class of Singularly Perturbed O.D.Eqns	189
6.4	Bifurcation of Periodic Solutions	189
6.5	Traveling Waves in Homoclinic Cases	193
6.6	Traveling Waves in Heteroclinic Cases	194
6.7	Traveling Waves in 2 Dimensions	196
7	Periodic Oscillations of Wave Equations	199
7.1	Periodics of Undamped Beam Equations	199
7.1.1	Undamped Forced Nonlinear Beam Equations	199
7.1.2	Existence Results on Periodics	201
7.1.3	Subharmonics from Homoclinics	207
7.1.4	Periodics from Periodics	209
7.1.5	Applications to Forced Nonlinear Beam Equations	210
7.2	Weakly Nonlinear Wave Equations	216
7.2.1	Excluding Small Divisors	216
7.2.2	Lebesgue Measures of Nonresonances	220
7.2.3	Forced Periodic Solutions	221
7.2.4	Theory of Numbers and Nonresonances	223
8	Topological Degree for Wave Equations	227
8.1	Discontinuous Undamped Wave Equations	227
8.2	Standard Classes of Multi-Mappings	228
8.3	M -Regular Multi-Functions	229
8.4	Classes of Admissible Mappings	230
8.5	Semilinear Wave Equations	231
8.6	Construction of Topological Degree	232
8.7	Local Bifurcations	235
8.8	Bifurcations from Infinity	237
8.9	Bifurcations for Semilinear Wave Equations	238
8.10	Chaos for Discontinuous Beam Equations	238
	Bibliography	243
	Index	257
