

Transport Phenomena in Multiphase Systems

Amir Faghri

Dean and UTC Endowed Chair Professor
in Thermal-Fluids Engineering
School of Engineering
University of Connecticut
Storrs, Connecticut

Yuwen Zhang

Associate Professor
Department of Mechanical and Aerospace Engineering
University of Missouri-Columbia
Columbia, Missouri

Amsterdam • Boston • Heidelberg • London
New York • Oxford • Paris • San Diego
San Francisco • Singapore • Sydney • Tokyo

Table of Contents

Preface	xv
Nomenclature	xxi
Chapter 1 Introduction to Transport Phenomena	1
1.1 Introduction	1
1.2 Physical Concepts	3
1.2.1 Sensible Heat	3
1.2.2 Latent Heat	5
1.2.3 Phase Change	7
1.3 Molecular Level Presentation	9
1.3.1 Introduction	9
1.3.2 Kinetic Theory	10
1.3.3 Intermolecular Forces	15
1.3.4 Cohesion and Adhesion	19
1.3.5 Enthalpy and Energy	19
1.4 Review of Fundamentals of Transport Phenomena	21
1.4.1 Continuum Flow Limitations	21
1.4.2 Transport Phenomena	23
1.4.3 Microscale and Nanoscale Transport Phenomena	44
1.4.4 Dimensional Analysis	48
1.4.5 Scaling	58
1.5 Multiphase Systems and Phase Changes	62
1.5.1 Overview and Classifications	62
1.5.2 Solid-Liquid Phase Change Including Melting and Solidification	66
1.5.3 Solid-Vapor Phase Change Including Sublimation and Vapor Deposition	67
1.5.4 Interfacial Phenomena	68
1.5.5 Condensation	69
1.5.6 Evaporation and Boiling	71
1.5.7 Two-Phase Flow	72

1.6 Applications of Transport Phenomena in Multiphase Systems	73
1.6.1 Energy Systems, Including Fuel Cells and Combustors	73
1.6.2 Food and Biological Material Processing	83
1.6.3 Laser-Assisted Manufacturing	84
1.6.4 Heat Pipes	88
1.6.5 Electronics Cooling	92
1.6.6 Microscale Phase Change Heat Transfer	96
References,	98
Problems	103

Chapter 2 Thermodynamics of Multiphase Systems 107

2.1 Introduction	107
2.2 Fundamentals of Thermodynamics	108
2.2.1 Thermodynamic Laws	108
2.2.2 Thermodynamic Relations	109
2.2.3 Gibbs Phase Rule	111
2.3 Equilibrium and Stability of Single-Phase Systems	111
2.3.1 Equilibrium Criteria for Pure Substances	112
2.3.2 Maxwell Relations	114
2.3.3 Closed Systems with Compositional Change	115
2.3.4 Stability Criteria	117
2.3.5 System with Chemical Reactions	123
2.4 Thermodynamic Surfaces and Equations of State	128
2.4.1 Thermodynamic Surfaces of a Single-Component Substance	128
2.4.2 p-T, p-v and T-s Phase Diagrams for a Pure Substance	129
2.4.3 Equations of State for Pure Substances	131
2.4.4 Phase Diagrams for Multicomponent Systems	136
2.5 Equilibrium and Stability of Multiphase Systems	141
2.5.1 Two-Phase Single-Component Systems	141
2.5.2 Clapeyron Equation	142
2.5.3 Multiphase Multicomponent Systems	146
2.5.4 Metastable Equilibrium and Nucleation	147
2.6 Thermodynamics at the Interfaces	150
2.6.1 Equilibrium at the Interface	150
2.6.2 Surface Tension: Thermodynamic Definitions	152
2.6.3 Microscale Vapor Bubbles and Liquid Droplets	156
2.6.4 Disjoining Pressure: Thermodynamic and Hydrodynamic Definitions	162
2.6.5 Superheat-Thermodynamic and Kinetic Limit Definitions	167
References	172
Problems	173

Chapter 3 Generalized Governing Equations: Local Instance Formulations 177

3.1 Introduction	177
------------------	-----

3.2 Macroscopic (Integral) Formulation	179
3.2.1 Conservation of Mass	183
3.2.2 Momentum Equation	183
3.2.3 Energy Equation	185
3.2.4 The Second Law of Thermodynamics	186
3.2.5 Species	187
3.3 Microscopic (Differential) Formulation	189
3.3.1 Conservation of Mass	190
3.3.2 Momentum Equation	191
3.3.3 Energy Equation	193
3.3.4 The Second Law of Thermodynamics	198
3.3.5 Species	199
3.3.6 Jump Conditions at the Interfaces	206
3.3.7 Classification of PDEs and Boundary Conditions	219
3.3.8 Rarefied Vapor Self-Diffusion Model	222
3.3.9 An Extension: Combustion	223
References	230
Problems	231

Chapter 4 Generalized Governing Equations: Averaging Formulations

238

4.1 Introduction	238
4.2 Overview of Averaging Approaches	239
4.2.1 Eulerian Averaging	239
4.2.2 Lagrangian Averaging	243
4.2.3 Molecular Statistical Averaging	243
4.3 Volume-Averaged Multi-Fluid Models	244
4.3.1 Continuity Equation	244
4.3.2 Momentum Equation	245
4.3.3 Energy Equation	248
4.3.4 The Second Law of Thermodynamics	251
4.3.5 Species	252
4.4 Volume-Averaged Homogeneous Model	258
4.4.1 Continuity Equation	258
4.4.2 Momentum Equation	258
4.4.3 Energy Equation	259
4.4.4 The Second Law of Thermodynamics	260
4.4.5 Species	260
4.5 Area-Averaged Models for Channel Flows	264
4.5.1 Homogeneous Model	266
4.5.2 Separated Flow Model	270
4.6 An Extension: Porous Media	273
4.6.1 Conservation of Mass	275
4.6.2 Conservation of Momentum	276
4.6.3 Energy Equation	285

4.6.4 The Second Law of Thermodynamics	287
4.6.5 Species	288
4.6.6 Multiphase Transport in Porous Media	289
4.7 Boltzmann Statistical Averaging	303
4.7.1 Boltzmann Equation	303
4.7.2 Lattice Boltzmann Model (LBM)	311
4.7.3 LBM for Multiphase Flows	314
References	318
Problems	320

Chapter 5 Solid-Liquid-Vapor Phenomena and Interfacial Heat and Mass Transfer

	331
5.1 Introduction	331
5.2 Surface Tension	332
5.2.1 Capillary Pressure: The Young-Laplace Equation	332
5.2.2 Interface Shapes at Equilibrium	334
5.2.3 Effects of Interfacial Tension Gradients	337
5.3 Wetting Phenomena and Contact Angles	342
5.3.1 Equilibrium and Apparent Contact Angles	342
5.3.2 Wettability and Adsorption	344
5.4 Phase Equilibrium in Microscale Interfacial Systems	347
5.4.1 Ultra-Thin Liquid Films, Disjoining Pressure	347
5.4.2 Change in Saturated Vapor Pressure over a Curved Interface	350
5.5 Transport Effects at the Interface	351
5.5.1 Interfacial Mass, Momentum, Energy, and Species Balances	351
5.5.2 Interfacial Resistance in Vaporization and Condensation	366
5.5.3 Formation of and Heat Transfer through Thin Liquid Films	368
5.5.4 Heat Transfer in the Thin-Film Region of an Axially-Grooved Structure	373
5.6 Dynamic Behaviors of Interfaces	382
5.6.1 Rayleigh-Taylor and Kelvin-Helmholtz Instabilities	382
5.6.2 Surface Waves on Liquid Film Flow	386
5.7 Numerical Simulation of Interfaces and Free Surfaces	392
5.7.1 Continuum Approach: Interface Tracking Techniques	393
5.7.2 Noncontinuum Approach: Molecular Dynamic Simulation	402
References	406
Problems	410

Chapter 6 Melting and Solidification

	421
6.1 Introduction	421
6.2 Boundary Conditions at the Solid-Liquid Interface	424
6.3 Exact Solution	427
6.3.1 Governing Equations of the Solidification Problem	427
6.3.2 Dimensionless Form of the Governing Equations	429
6.3.3 Exact Solution of the One-Region Problem	430

6.3.4 Exact Solution of the Two-Region Problem	435
6.4 Integral Approximate Solution	436
6.4.1 Heat Conduction in a Semi-Infinite Body	436
6.4.2 One-Region Problem	439
6.4.3 Two-Region Problem	443
6.4.5 Solidification/Melting in Cylindrical Coordinate Systems	450
6.5 Numerical Simulation	454
6.5.1 Overview	454
6.5.2 Enthalpy Method	455
6.5.3 Equivalent Heat Capacity Method	460
6.5.4 Temperature-Transforming Model	462
6.6 Solidification of a Binary Solution System	465
6.6.1 Overview	465
6.6.2 Integral Approximate Method	466
6.6.3 Mixture Model	471
6.6.4 Volume-Averaging Model	475
6.7 Contact Melting in a Rectangular Cavity	479
6.7.1 Fixed Melting and Contact Melting	479
6.7.2 Contact Melting in a Rectangular Cavity	480
6.8 Melting and Solidification in Porous Media	484
6.8.1 Convection-Controlled One-Region Melting Problem	484
6.8.2 An Enthalpy Model for Two-Region Melting/Solidification	488
6.9 Applications of Solid-Liquid Phase Change	492
6.9.1 Latent Heat Thermal Energy Storage	492
6.9.2 Heat Pipe Startup from Frozen State	495
6.9.3 Thermal Protection from Intense Localized Heating Using PCM	499
6.9.4 Microwave Thawing of Food and Biological Materials	501
6.9.5 Laser Drilling	505
6.9.6 Selective Laser Sintering (SLS) of Metal Powders	508
6.10 Microscale Phase Change	512
6.10.1 Overview	512
6.10.2 Two-Step Model	513
References	517
Problems	522

Chapter 7 Sublimation and Vapor Deposition	531
7.1 Introduction	531
7.2 Sublimation	534
7.2.1 Sublimation over a Flat Plate	534
7.2.2 Sublimation inside an Adiabatic Tube	538
7.2.3 Sublimation inside a Tube Subjected to External Heating	543
7.2.4 Sublimation with Chemical Reaction	550
7.3 Chemical Vapor Deposition (CVD)	554
7.3.1 Introduction	554

7.3.2 Governing Equations of CVD	557
7.3.3 Transport Properties	559
7.3.4 Typical Selected Applications	563
References	574
Problems	577
Chapter 8 Condensation	581
8.1 Introduction	581
8.2 Dropwise Condensation	587
8.2.1 Dropwise Condensation Formation Theories	587
8.2.2 Critical Droplet Radius for Spontaneous Growth and Destruction	588
8.2.3 Thermal Resistances in the Condensation Processes	594
8.2.4 Heat Transfer Coefficient for Dropwise Condensation	597
8.3 Filmwise Condensation	599
8.3.1 Regimes of Filmwise Condensation	599
8.3.2 Modeling of Laminar Film Condensation of a Binary Vapor Mixture	600
8.3.3 Filmwise Condensation in a Stagnant Pure Vapor Reservoir	605
8.3.4 Effects of Vapor Motion	614
8.3.5 Turbulent Film Condensation	619
8.3.6 Other Filmwise Condensation Configurations	625
8.3.7 Effects of Noncondensable Gas	627
8.3.8 Flooding or Entrainment Limit	633
8.4 Nongravitational Condensate Removal	638
8.4.1 Condensation in a Tube with Suction at the Porous Wall	638
8.4.2 Annular Condensation Heat Transfer in a Microgravity Environment	643
8.4.3 Condensation Removal by a Centrifugal Field via a Rotating Disk	649
8.4.4 Condensation by Capillary Action in a Heat Pipe	652
8.5 Film Condensation in Porous Media	658
8.5.1 Overview	658
8.5.2 Gravity-Dominated Film Condensation on an Inclined Wall	660
8.5.3 Effect of Surface Tension on Condensation in Porous Media	663
References	667
Problems	670
Chapter 9 Evaporation	678
9.1 Introduction	678
9.2 Classification and Criteria of Evaporation	681
9.3 Evaporation from an Adiabatic Wall	685
9.3.1 Evaporation from Horizontal Films	685
9.3.2 Evaporation from a Vertical Falling Film	691

9.4 Falling Film Evaporation on a Heated Wall	701
9.4.1 Classical Nusselt Evaporation	702
9.4.2 Laminar Falling Film with Surface Waves	706
9.4.3 Turbulent Falling Film	714
9.4.4 Surface Spray Cooling	716
9.4.5 Evaporation from a Wedge or Cone Embedded in a Porous Medium	718
9.5 Direct Contact Evaporation	724
9.5.1 Evaporation of a Liquid Droplet in a Hot Gas	724
9.5.2 Evaporation of a Liquid Jet in a Pure Vapor	727
9.6 Evaporation inside Pores and Slots/Microchannels	729
9.6.1 Evaporation from Cylindrical Pore under Low/Moderate Heat Flux	730
9.6.2 Fluid Flow Effect in Pore/Slots during Evaporation	734
9.6.3 Evaporation under High Heat Flux	738
9.6.4 Evaporation in an Inclined Microchannel	744
9.7 Evaporation from Inverted Meniscus in Porous Media	747
References	755
Problems	758

Chapter 10 Boiling	765
10.1 Introduction	765
10.2 Pool Boiling Regimes	767
10.3 Nucleate Boiling	770
10.3.1 Nucleation and Inception	770
10.3.2 Bubble Dynamics	775
10.3.3 Bubble Detachment	786
10.3.4 Nucleate Site Density	791
10.3.5 Bubble Growth and Merger	792
10.3.6 Heat Transfer in Nucleate Boiling	796
10.4 Critical Heat Flux	803
10.5 Transition Boiling and Minimum Heat Flux	806
10.5.1 Transition Boiling	806
10.5.2 Minimum Heat Flux	809
10.6 Film Boiling	811
10.6.1 Film Boiling Analysis	811
10.6.2 Direct Numerical Simulation of Film Boiling	821
10.6.3 Leidenfrost Phenomena	824
10.7 Boiling in Porous Media	833
10.7.1 Nucleate Boiling in a Wicked Surface	833
10.7.2 Boiling in Porous Media Heated from Below	837
10.7.3 Film Boiling Analysis in Porous Media	840
References	843
Problems	849

Chapter 11 Two-Phase Flow and Heat Transfer	853
11.1 Introduction	853
11.2 Flow Patterns of Liquid-Vapor (Gas) Two-Phase Flow	854
11.2.1 Concepts and Notations	854
11.2.2 Flow Patterns in Vertical Tubes	857
11.2.3 Flow Patterns in Horizontal Tubes	861
11.3 Two-Phase Flow Models	864
11.3.1 Homogeneous Flow Model	864
11.3.2 Separated Flow Model	866
11.3.3 Frictional Pressure Drop	870
11.3.4 Void Fraction	878
11.4 Forced Convective Condensation in Tubes	883
11.4.1 Two-Phase Flow Regimes	883
11.4.2 Heat Transfer Predictions	885
11.5 Forced Convective Boiling in Tubes	889
11.5.1 Regimes in Horizontal and Vertical Tubes	889
11.5.2 Bubble Lift-Off Size in Forced Convective Boiling	895
11.5.3 Heat Transfer Predictions	899
11.6 Two-Phase Flow and Heat Transfer in Micro- and Minichannels	904
11.6.1 Two-Phase Flow Patterns	904
11.6.2 Flow Condensation	908
11.6.3 Flow Evaporation and Boiling	920
References	937
Problems	944
Appendix A: Constants and Conversion Factors	950
Appendix B: Thermophysical Properties	954
Appendix C: Vectors and Tensors	1006
Index	1013
