## Transportation Energy Data Book Quick Facts

## Petroleum

- The U.S. produces 7.9 million barrels of petroleum per day (M bpd), or $10 \%$ of the world's 82.59 M bpd.
- The U.S. consumes 18.8 M bpd, or $22 \%$ of the world's 87.3 M bpd.
- U.S. transportation petroleum use is $67 \%$ of total U.S. petroleum use.
- U.S. transportation petroleum use is $161 \%$ of total U.S. petroleum production.
- Petroleum comprises 93\% of U.S. transportation energy use.
- Cars and light trucks account for $63 \%$ of U.S. transportation petroleum use.
- Medium trucks account for $4 \%$ of U.S. transportation petroleum use.
- Heavy trucks account for $18 \%$ of U.S. transportation petroleum use.

## Energy

- U.S. transportation energy use accounts for $28 \%$ of total U.S. energy use.
- $99 \%$ of ethanol consumed in the U.S. is consumed as ethanol in gasohol (or "E10").
- Cars and light trucks account for $59 \%$ of U.S. transportation energy use.
- Medium trucks account for 5\% of U.S. transportation energy use.
- Heavy trucks account for $17 \%$ of U.S. transportation energy use.

## Light Vehicle Characteristics

- There are 130,892,000 cars and 99,552,000 light trucks in the U.S. (230,444,000 total light vehicles).
- U.S. cars:
- 6,089,000 cars were sold in 2011.
- The average age of a U.S. car is 11.1 years; the average car lifetime is 16.9 years.
- The average fuel economy for the U.S. car fleet (all cars on the road today) is 23.0 mpg .
- Cars comprise $48 \%$ of new light vehicle sales.
- U.S. light trucks:
- 6,645,000 light trucks were sold in 2011.
- The average age of a U.S. light truck is 10.4 years; the average light truck lifetime is 15.5 years.
- The average fuel economy for the U.S. light truck fleet (all light trucks on the road today) is 17.1 mpg .
- Light trucks comprise $52 \%$ of new light vehicle sales.
- There were $8,535,000$ fleet vehicles in 2010: $4,266,000$ cars and 4,270,000 trucks.
- U.S. car registrations account for $17 \%$ of total world car registrations.
- U.S. truck and bus registrations account for $39 \%$ of total world truck and bus registrations.
- The average U.S. household vehicle travels 11,300 miles per year.

## Heavy Truck Characteristics

- 10,770,000 heavy trucks were registered in the U.S. in 2010.
- In 2002 (the last time a survey was conducted), heavy trucks accounted for $80 \%$ of medium and heavy truck fuel use.

Note: Data are for calendar year 2010 or 2011 unless otherwise noted.

## DOCUMENT AVAILABILITY

Reports produced after January 1, 1996, are generally available free via the U.S. Department of Energy (DOE) Information Bridge:

Web site: http://www.osti.gov/bridge
Reports produced before January 1, 1996, may be purchased by members of the public from the following source:
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
Telephone: 703-605-6000 (1-800-553-6847)
TDD: 703-487-4639
Fax: 703-605-6900
E-mail: info@ ntis.fedworld.gov
Web site: http://www.ntis.gov/support/ordernowabout.htm

Reports are available to DOE employees, DOE contractors, Energy Technology Data Exchange (ETDE) representatives, and International Nuclear Information System (INIS) representatives from the following source:

Office of Scientific and Technical Information
P.O. Box 62

Oak Ridge, TN 37831
Telephone: 865-576-8401
Fax: 865-576-5728
E-mail: reports@adonis.osti.gov
Web site: http://www.osti.gov/contact.html

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. ## FOREWORD

Welcome to this 31st edition of the Transportation Energy Data Book. This edition builds on a 36 -year tradition of Data Books supported by Philip Patterson, whose recent retirement marked the end of an era for a long-time asset and shining example both for the Department of Energy (DOE) and the transportation energy community. Twenty-two editions of this Data Book have been produced by Stacy Davis; DOE is grateful for the dedication, consistency, and skill she has brought to this effort.

I would like to bring to your attention some of the data that are new in this edition:

- Table 1.8. Imported Crude Oil by Country of Origin, 1973-2011 - a new table added this year from historical data in EIA's Monthly Energy Review
- Table 1.9. Crude Oil Supplies, 1973-2011 - another new table from historical EIA data
- Table 3.1. World Production of Cars and Trucks, 2000-2010 - a new table comparing global production of passenger vehicles today and ten years ago
- Table 4.9. Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 - a list of two-wheel drive SUVs that are considered cars under new Corporate Average Fuel Economy rules
- Table 4.25. List of Model Year 2011 Cars with Gas Guzzler Taxes - an updated list for model year 2011 of vehicles subject to the Gas Guzzler Tax levied by the IRS
- Table 6.4. Hybrid and Plug-in Vehicle Sales, 1999-2011 - this new table shows trends in hybrid and plug-in vehicle sales, both in absolute units sold and relative to total light vehicle sales, since 1999
- Table 8.4. Annual Household Expenditures for Transportation, 1985-2010 - this new table relates various transportation expenditures (vehicle purchases, gas expenditure, public transit fares, etc.) to average annual household income

Additionally, it's worth making special note that since the Federal Highway Administration (FHWA) discontinued their VM-1 series showing car and light truck vehicle miles and fuel use, ORNL developed a model to estimate data for cars and light trucks to continue existing car and light truck data series presented in this data book. The model uses data from FHWA Highway Statistics 2010, Environmental Protection Agency's Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.

I hope you find value in this data book. Stacy and I welcome suggestions on how to improve it.

Jacob W. Ward
Senior Analyst, Vehicle Technologies Program
U.S. Department of Energy

## ACKNOWLEDGMENTS

The authors would like to express their gratitude to the many individuals who assisted in the preparation of this document. First, we would like to thank Jacob Ward and the Vehicle Technologies Program staff for their continued support of the Transportation Energy Data Book project. We would also like to thank Lindsey Marlar for the cover. This book would not have been possible without the dedication of Debbie Bain, who has masterfully prepared the manuscript since 1998.

Edition 31 is the first edition of this series without Phil Patterson at the helm. Though he was certainly missed, his leadership, guidance, and vision through the years have allowed us to continue this report into the future with the same level of excellence. The authors and the transportation research community will be forever grateful for his efforts.

#### Abstract

The Transportation Energy Data Book: Edition 31 is a statistical compendium prepared and published by Oak Ridge National Laboratory (ORNL) under contract with the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Vehicle Technologies Program. Designed for use as a desk-top reference, the Data Book represents an assembly and display of statistics and information that characterize transportation activity, and presents data on other factors that influence transportation energy use. The purpose of this document is to present relevant statistical data in the form of tables and graphs. The latest edition of the Data Book is available to a larger audience via the Internet (cta.ornl.gov/data).

This edition of the Data Book has 12 chapters which focus on various aspects of the transportation industry. Chapter 1 focuses on petroleum; Chapter 2 - energy; Chapter 3 highway vehicles; Chapter 4 - light vehicles; Chapter 5 - heavy vehicles; Chapter 6 - alternative fuel vehicles; Chapter 7 - fleet vehicles; Chapter 8 - household vehicles; Chapter 9 nonhighway modes; Chapter 10 - transportation and the economy; Chapter 11 - greenhouse gas emissions; and Chapter 12 - criteria pollutant emissions. The sources used represent the latest available data. There are also three appendices which include detailed source information for some tables, measures of conversion, and the definition of Census divisions and regions. A glossary of terms and a title index are also included for the reader's convenience.

## INTRODUCTION

In January 1976, the Transportation Energy Conservation (TEC) Division of the Energy Research and Development Administration contracted with Oak Ridge National Laboratory (ORNL) to prepare a Transportation Energy Conservation Data Book to be used by TEC staff in their evaluation of current and proposed conservation strategies. The major purposes of the Data Book were to draw together, under one cover, transportation data from diverse sources, to resolve data conflicts and inconsistencies, and to produce a comprehensive document. The first edition of the TEC Data Book was published in October 1976. With the passage of the Department of Energy (DOE) Organization Act, the work being conducted by the former Transportation Energy Conservation Division fell under the purview of the DOE's Office of Transportation Programs. This work continues today in the Vehicle Technologies Program.

Policymakers and analysts need to be well-informed about activity in the transportation sector. The organization and scope of the data book reflect the need for different kinds of information. For this reason, Edition 31 updates much of the same type of data that is found in previous editions.

In any attempt to compile a comprehensive set of statistics on transportation activity, numerous instances of inadequacies and inaccuracies in the basic data are encountered. Where such problems occur, estimates are developed by ORNL. To minimize the misuse of these statistics, an appendix (Appendix A) is included to document the estimation procedures. The attempt is to provide sufficient information for the conscientious user to evaluate the estimates and to form their own opinions as to their utility. Clearly, the accuracy of the estimates cannot exceed the accuracy of the primary data, an accuracy which in most instances is unknown. In cases where data accuracy is known or substantial errors are strongly suspected in the data, the reader is alerted. In all cases it should be recognized that the estimates are not precise.

The majority of the statistics contained in the data book are taken directly from published sources, although these data may be reformatted for presentation by ORNL. Consequently, neither ORNL nor DOE endorses the validity of these data.

## Chapter 1 <br> Petroleum

Summary Statistics from Tables/Figures in this Chapter

| Source |  |  |  |
| :--- | :--- | ---: | ---: |
| Table 1.3 | World Petroleum Production, 2011 (million barrels per day) |  |  |
|  | a |  | 82.59 |
|  | U.S. Production (million barrels per day) | 7.85 |  |
|  | U.S. Share |  | $9.5 \%$ |
| Table 1.4 | World Petroleum Consumption, 2011 (million barrels per day) |  | 87.28 |
|  | U.S. Consumption (million barrels per day) |  | 18.84 |
|  | U.S. Share | OECD | North |
|  |  | Europe | America |
|  | Figure 1.5 | Average Refinery Yield, 2011 | $19.3 \%$ |
|  | Gasoline | $42.7 \%$ |  |
|  | Diesel oil | $13.8 \%$ | $25.3 \%$ |
|  | Residual fuel | $6.8 \%$ | $5.8 \%$ |
|  | Kerosene | $21.1 \%$ | $18.9 \%$ |
|  | Other |  | $160.8 \%$ |
| Table 1.13 | U.S. transportation petroleum use as a percent of U.S. petroleum |  |  |
|  | production, 2011 |  | $44.8 \%$ |
| Table 1.13 | Net imports as a percentage of U.S. petroleum consumption, 2011 |  | $69.4 \%$ |
| Table 1.14 | Transportation share of U.S. petroleum consumption, 2011 |  | $85.9 \%$ |
| Table 1.17 | Highway share of transportation petroleum consumption, 2010 |  | $63.6 \%$ |
| Table 1.17 | Light vehicle share of transportation petroleum consumption, 2010 |  |  |

In this document, petroleum is defined as crude oil (including lease condensate) and natural gas plant liquids.

[^0]Although the world has consumed about $40 \%$ of estimated conventional oil resources, the total fossil fuel potential is huge. Methane hydrates-a potential source of natural gas-are included in the "additional occurrences" of unconventional natural gas, and constitute the largest resource.

Table 1.1
World Fossil Fuel Potential
(gigatonnes of carbon)

|  | Consumption <br> $(1860-1998)$ | Reserves | Resources | Additional <br> occurrences |
| :--- | :---: | :---: | :---: | :---: |
| Oil |  |  |  |  |
| $\quad$ Conventional | 97 | 120 | 121 | 0 |
| $\quad$ Unconventional | 6 | 102 | 305 | 914 |
| Natural Gas |  |  |  |  |
| $\quad$ Conventional | 36 | 83 | 170 | 0 |
| $\quad$ Unconventional | 1 | 144 | 364 | 14,176 |
| Coal | 155 | 533 | 4,618 | $a$ |

${ }^{\text {a }}$ Data are not available.

In 2011, the Organization of Petroleum Exporting Countries (OPEC) accounted for more than $42 \%$ of world oil production. Responding to low oil prices in early 2000, Mexico, Norway, Russia, and Oman joined OPEC in cutting production. This group of oil countries, referred to here as OPEC+, account for over $63 \%$ of world oil production.

[^1]This table shows petroleum production, which includes both crude oil and natural gas plant liquids. Because other liquids and processing gain are not included, the world total is smaller than world petroleum consumption (Table 1.4). The United States was responsible for $9.5 \%$ of the world's petroleum production in 2011 and $7.7 \%$ of the world's crude oil production (Table 1.2).

[^2]During the 1980s and 1990s, the United States accounted for about one-quarter of the world's petroleum consumption, but since 2000 that share has been decreasing. In 2011 the United States accounted for only 21.6\%. World petroleum consumption decreased in 2009 but rose in 2010. Non-OECD consumption has continued to increase.

Note: Production data are dry gas production.
${ }^{a}$ Reserves are 2009 data.

The share of petroleum imported to the United States can be calculated using total imports or net imports. Net imports, which are the preferred data, rose to over $50 \%$ of U.S. petroleum consumption for the first time in 1998, while total imports reached $50 \%$ for the first time in 1993. OPEC share of net imports has been below $50 \%$ since 1993.

[^4]Just over half of the oil imported to the United States in 2011 was from the western hemisphere. Canada, Mexico, and Venezuela provided most of the oil from the western hemisphere, along with small amounts from Brazil, Columbia, Ecuador, and the U.S. Virgin Islands (these countries are not listed separately.

${ }^{\text {a }}$ Organization of Petroleum Exporting Countries. See Glossary for membership.

The Strategic Petroleum Reserve (SPR) began in October 1977 as a result of the 1975 Energy Policy and Conservation Act. Its purpose is to provide protection against oil supply disruptions. The U.S. consumed nearly 20 million barrels per day in 2011. At that rate of consumption, the SPR supply would last 37 days if used exclusively and continuously.

${ }^{\text {a }}$ Other crude oil stocks include stocks held by petroleum companies, as well as stocks of Alaskan crude oil in transit.
${ }^{\mathrm{b}}$ Strategic Petroleum Reserves divided by U.S. consumption per day. This would only hold true if the SPR were the only oil used for that many days.

Major oil price shocks have disrupted world energy markets five times in the past 30 years (1973-74, 1979-80, 1990-91, 1999-2000, 2008). Most of the oil price shocks were followed by an economic recession in the United
States.

Figure 1.3. Oil Price and Economic Growth, 1970-2011

Source:
Greene, D.L. and N. I. Tishchishyna, Costs of Oil Dependence: A 2000 Update, Oak Ridge National Laboratory, ORNL/TM-2000/152, Oak Ridge, TN, 2000, and data updates, 2011. (Additional resources: cta.ornl.gov/cta/publications.shtml)

The United States has long recognized the problem of oil dependence and the economic problems that arise from it. According to Oak Ridge National Laboratory (ORNL) researchers Greene and Hopson, oil dependence is a combination of four factors: (1) a noncompetitive world oil market strongly influenced by the OPEC cartel, (2) high levels of U.S. imports, (3) the importance of oil to the U.S. economy, and (4) the lack of economical and readily available substitutes for oil. ORNL developed a model to estimate the historical cost of oil dependence and analyze the potential effectiveness of policies on likely future costs. The most recent study using this model shows that the U.S. economy suffered the greatest losses in 2008 when wealth transfer and GDP losses (combined) amounted to approximately half a trillion dollars. However, when comparing oil dependence to the size of the economy, the year 1980 is the highest. Oil dependence costs were almost $4.5 \%$ of GDP in 1980, but were under $3.5 \%$ in 2008. In 2009, the average oil price fell to about $\$ 60$ per barrel and oil dependence costs fell to about $\$ 300$ billion for 2009 and 2010.

Figure 1.4. Costs of Oil Dependence to the U.S. Economy, 1970-2010

## Source:

Greene, David L., Roderick Lee, and Janet L. Hopson, "OPEC and the Costs to the U.S. Economy of Oil Dependence: 1970-2010," Oak Ridge National Laboratory Memorandum, 2011.

## Notes:

Wealth Transfer is the product of total U.S. oil imports and the difference between the actual market price of oil (influenced by market power) and what the price would have been in a competitive market.

Dislocation Losses are temporary reductions in GDP as a result of oil price shocks.
Loss of Potential Gross Domestic Product (GDP) results because a basic resource used by the economy to produce output has become more expensive. As a consequence, with the same endowment of labor, capital, and other resources, our economy cannot produce quite as much as it could have at a lower oil price.

Other parts of the world refine crude oil to produce more diesel fuel and less gasoline than does North America. The OECD Europe countries produce the lowest share of gasoline in 2011.

Figure 1.5. Refinery Gross Output by World Region, 2001 and 2011

International Energy Agency, Monthly Oil Survey, January 2012. (Additional resources: www.iea.org)

[^5]Oxygenate refinery input increased significantly in 1995, most certainly due to the Clean Air Act Amendments of 1990 which mandated the sale of reformulated gasoline in certain areas beginning in January 1995. The use of MTBE has declined in recent years due to many states banning the additive. The other hydrocarbons and liquids category includes unfinished oils, motor gasoline blending components and aviation gasoline blending components. In 2005 the gasoline blending components rose significantly.

${ }^{\text {a }}$ Includes aviation gasoline ( $0.1 \%$ ), kerosene ( $0.1 \%$ ), residual fuel oil ( $4.0 \%$ ), naphtha and other oils for petrochemical feedstock use ( $1.0 \%$ ), other oils for petrochemical feedstock use ( $1.0 \%$ ), special naphthas $(0.2 \%$ ), lubricants ( $1.0 \%$ ), waxes ( $0.1 \%$ ), petroleum coke ( $5.3 \%$ ) asphalt and road oil (2.4\%), still gas (4.3\%), and miscellaneous products ( $0.5 \%$ ).
${ }^{\mathrm{b}}$ Products sum greater than $100 \%$ due to processing gain. The processing gain for years 1978 to 1980 is assumed to be 4 percent.

Domestic petroleum production increased in 2009 for the first time in 20 years and has continued to increase. Most of the petroleum imported by the United States is in the form of crude oil. The United States does export small amounts of petroleum, mainly refined petroleum products which go to Canada and Mexico.

${ }^{a}$ Total domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.

The U.S. is responsible for $22 \%$ of the world's petroleum consumption. The United States relies heavily on imported petroleum. Imports accounted for nearly 45\% of U.S. petroleum consumption in 2011.

## Sources:

U.S. Department of Energy, Energy Information Administration, Monthly Energy Review, March 2012, Tables 2.5, 3.1, and A3. (Pre-1973 data from the Annual Energy Review). World petroleum consumption - U.S. Department of Energy, Energy Information Administration, International Energy Statistics Website, May 2012. (Additional resources: www.eia.doe.gov)

[^7]Before 1989 the U.S. produced enough petroleum to meet the needs of the transportation sector, but was still short of meeting the petroleum needs of all the sectors, including industrial, residential and commercial, and electric utilities. In 1973 the gap between what the U.S. produced and what was consumed was 5.6 million barrels per day. By 2035, the gap is expected to be at least 8.0 million barrels per day if all sources of petroleum are included or 11.1 million barrels per day if only conventional petroleum sources are used.

Figure 1.6. United States Petroleum Production and Consumption - All Sectors, 1973-2035

## Source:

See Tables 1.12 and 2.7. Projections are from the Energy Information Administration, Annual Energy Outlook 2012, January 2012.

Notes: The U.S. Production has two lines after 2010. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2006 and 2007 is the result of the FHWA's methodology change. The data change from historical to projected values occurs between 2010 and 2011.

In 1989 the transportation sector petroleum consumption surpassed U.S. petroleum production for the first time, creating a gap that must be met with imports of petroleum. By the year 2035, transportation petroleum consumption is expected to grow to more than 15 million barrels per day; at that time, the gap between U.S. production and transportation consumption will be about 2.5 million barrels per day (when including the nonpetroleum sources).

Figure 1.7. United States Petroleum Production, and Transportation Consumption, 1970-2035

## Source:

See Tables 1.12 and 2.7. Projections are from the Energy Information Administration, Annual Energy Outlook 2012, January 2012.

Notes: The U.S. Production has two lines after 2010. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2010 and 2011 are caused by the data change from historical to projected values. The sharp increase in the value for heavy trucks between 2006 and 2007 is the result of the FHWA's methodology change.

Transportation accounted for almost $70 \%$ of the U.S. petroleum use in 2010 and 2011. Total petroleum consumption reached more than 20 million barrels per day from 2004 to 2007, but has been below that level from 2008 through present. Though petroleum consumption increased slightly from 2009 to 2010, it declined again in 2011.

## Source:

See Appendix A for Highway Energy Use.

[^8]Although about 18\% of transportation energy use is for nonhighway modes, only $14 \%$ of transportation petroleum use is for nonhighway. This is because some nonhighway modes, such as pipelines and transit rail, use electricity. An estimate for the petroleum used to make electricity is included in the data. See Table 2.8 for nonhighway transportation energy use in trillion Btu.

|  | Cars | 8,288 | 30.0\% |
|  | Light trucks | 7,920 | 28.7\% |
|  | Medium/heavy trucks | 6,151 | 22.3\% |
|  | Buses | 190 | 0.7\% |
|  | Total Highway | 22,603 | 81.8\% |
|  | Air | 2,148 | 7.8\% |
|  | Water | 1,374 | 5.0\% |
|  | Pipeline | 933 | 3.4\% |
|  | Rail | 581 | 2.1\% |

Petroleum accounted for $35 \%$ of the world's energy use in 2009. Though petroleum is the dominant energy source for both OECD countries and non-OECD countries, the non-OECD countries rely on coal, natural gas, and hydroelectric power more than OECD countries do.

Figure 2.1. World Consumption of Primary Energy, 2009

Source:
U.S. Department of Energy, Energy Information Administration, International Energy Statistics Database, April 2012. (Additional resources: www.eia.doe.gov)

Total energy use was 97.5 quads in 2011 with transportation using 27.1\%. The Energy Information Administration includes renewable energy in each sector.

${ }^{\text {a }}$ Electrical energy losses have been distributed among the sectors.

In transportation, the alcohol fuels blended into gasoline to make gasohol (10\% ethanol or less) are counted under "renewables" and are not in with petroleum. The petroleum category, however, still contains other blending agents, such as MTBE, that are not actually petroleum, but are not broken out into a separate category.

Note: Gallons of E85, E95 and Ethanol in gasohol, do not include the gasoline portion of the blended fuel.

As data about alternative fuel use become available, an attempt is made to incorporate them into this table. Sometimes assumptions must be made in order to use the data. Please see Appendix A for a description of the methodology used to develop these data. See Table 1.17 for transportation petroleum use in thousand barrels per day.

Source:
See Appendix A for Highway Energy Use.
Note: Totals may not add due to rounding.
${ }^{\text {a }}$ Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles). These data have been revised due to a new data series for recreational boats.
${ }^{\mathrm{b}}$ Due to changes in the FHWA fuel use methodology, motorcycle, bus, and heavy truck data are not comparable with data before the year 2007.

About $18 \%$ of transportation energy use is for nonhighway modes. Air travel accounts for over $42.6 \%$ of nonhighway energy use. See Table 1.16 for nonhighway petroleum use in thousand barrels per day.

See Appendix A for Nonhighway Energy Use.
Note: Totals may not add due to rounding.

[^13]The Environmental Protection Agency's NONROAD2008a model estimates fuel use for different types of equipment and off-highway vehicles. Most of these vehicles/equipment use diesel fuel. Recreational equipment, such as offhighway motorcycles, snowmobiles, and ATVs, are mainly fueled by gasoline.

Table 2.9

## Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 (trillion Btus)

|  | Gasoline | Diesel | LPG | CNG | Total |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Agricultural equipment <br> Tractors, mowers, combines, balers, and other farm <br> equipment which has utility in its movement. | 8.4 | 554.2 | 0.0 | 0.0 | 562.6 |

[^15]The Federal Highway Administration (FHWA) cautions that data from 1993 on may not be directly comparable to earlier years. Some states have improved reporting procedures in recent years, and the estimation procedures were revised in 1994. Now, the FHWA does not publish separate estimates of gasohol or ethanol used in gasohol. See Table 2.3 for details on oxygenate usage.

Table 2.11
Highway Usage of Gasoline and Diesel, 1973-2010
(billion gallons)

| Year | Total gasoline and gasohol | Diesel ${ }^{\text {a }}$ | Percent diesel | Total highway fuel use |

[^16]Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences among the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes. These values are averages, and there is a great deal of variability even within a mode.

See Appendix A for Highway Passenger Mode Energy Intensities.

[^17]Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences between the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes.

## Source:

See Appendix A for Nonhighway Passenger Mode Energy Intensities.
${ }^{\text {a }}$ These data differ from the data on Table 2.12 because they include half of international services. These energy intensities may be inflated because all energy use is attributed to passengers-cargo energy use is not taken into account.
${ }^{\mathrm{b}}$ Data are not available.
${ }^{c}$ Average annual percentage calculated to earliest year possible.

The energy intensity of light rail systems, measured in btu per passenger-mile varies greatly. The weighted average of all light rail systems in 2010 is 3,626 btu/passenger-mile.

## Chapter 3 All Highway Vehicles and Characteristics

Summary Statistics from Tables in this Chapter

| Source |  |  |
| :---: | :--- | ---: |
| Table 3.2 | U.S. share of world car registrations, 2010 | $16.8 \%$ |
| Table 3.3 | U.S. share of world truck \& bus registrations, 2010 | $39.3 \%$ |
| Table 3.4 | Number of U.S. cars, 2010 (thousands) | 130,892 |
| Table 3.4 | Number of U.S. trucks, 2010 (thousands) | 110,322 |
| Table 3.7 | Vehicle miles traveled, 2010 (million miles) | $2,966,495$ |
|  | Cars | $52.3 \%$ |
|  | Two-axle, four-tire trucks | $37.0 \%$ |
|  | Combination trucks | $5.9 \%$ |
|  | Other single-unit trucks | $3.7 \%$ |
|  | Motorcycles | $0.6 \%$ |
|  | Buses | $0.5 \%$ |
| Table 3.10 | Average age of vehicles, 2011 |  |
|  | Cars (years) | 11.1 |
|  | Light trucks (years) | 10.4 |
|  | All light vehicles (years) | 10.8 |

The top countries producing the world's cars and trucks have changed over the last ten years. In 2010, China was the largest producer of cars and trucks. In 2000, Japan produced the most cars and the United States produced the most trucks (includes light trucks).

Table 3.1
World Production of Cars and Trucks, 2000 and 2010 (thousands)

| Cars |  |  | Percent change |
| :--- | ---: | ---: | :---: |
| China | 2000 | 2010 | $2000-2010$ |
| Japan | 605 | 9,494 | $1470 \%$ |
| Germany | 8,363 | $-1 \%$ |  |
| Brazil | 5,132 | 5,307 | $8 \%$ |
| U.S. | 1,362 | 2,828 | $108 \%$ |
| India | 5,542 | $-51 \%$ |  |
| Spain | 605 | 2,731 | $283 \%$ |
| France | 2,366 | -317 | $-34 \%$ |
| Mexico | 2,880 | 1,951 | $23 \%$ |

[^19]Use caution comparing historical data because of disconnects in data series. Also, the United States is unique in how many light trucks (SUVs, minivans, pickups) are used for personal travel. Those light trucks are not included on this table. The U.S. share of world cars continues to decline. The growth in the World total comes mainly from developing countries, like China, India, and South Korea.

## VEHICLES IN USE

Both the Federal Highway Administration (FHWA) and The Polk Company report figures on the car and truck population each year. The two estimates, however, differ by as much as $11.2 \%$ (1981). The differences can be attributed to several factors:

- The FHWA data include all vehicles which have been registered at any time throughout the calendar year. Therefore, the data include vehicles which were retired during the year and may double count vehicles which have been registered in different states or the same states to different owners. The Polk Company data include only those vehicles which are registered on July 1 of the given year.
- The classification of mini-vans, station wagons on truck chassis, and utility vehicles as cars or trucks causes important differences in the two estimates. The Polk Company data included passenger vans in the car count until 1980; since 1980 all vans have been counted as trucks. Recently, the Federal Highway Administration adjusted their definition of cars and trucks. Starting in 1993, some minivans and sport utility vehicles that were previously included with cars were included with trucks. This change produced a dramatic change in the individual percentage differences of cars and trucks. The difference in total vehicles has been less than $5 \%$ each year since 1990 and does not appear to be significantly affected by the FHWA reclassifications.
- The FHWA data include all non-military Federal vehicles, while The Polk Company data include only those Federal vehicles which are registered within a state. Federal vehicles are not required to have State registrations, and, according to the General Services Administration, most Federal Vehicles are not registered.

According to The Polk Company statistics, the number of cars in use in the United States declined from 1991 to 1992. This is the first decline in vehicle stock since the figures were first reported in 1924. However, the data should be viewed with caution. A redesign of Polk's approach in 1992 allowed a national check for duplicate registrations, which was not possible in earlier years. Polk estimates that, due to processing limitations, its vehicle population counts may have been inflated by as much as $1 \frac{1}{2}$ percent. Assuming that percentage is correct, the number of cars in use would have declined from 1991 to 1992 under the previous Polk method. The growing popularity of light trucks being used as passenger vehicles could also have had an impact on these figures.

In the early 1980's, researchers had to make a conscious choice of which data series to use, since they differed by as much as 11\%. In 2009 the two sources differed by about 1\%. Both sources show a decline in automobiles from 2008 to 2009 and an increase in trucks. The series, however, seem to be growing further apart.

Table 3.4

## U.S. Cars and Trucks in Use, 1970-2010 (thousands)

[^22]The graphs below show the number of motor vehicles per thousand people for various countries. The data for the United States are displayed in the line which goes from 1900 to 2010. The points labeled on that line show data for the other countries/regions around the world and how their vehicles per thousand people compare to the United States at two different points in time, 2000 and 2010. For instance, the graph shows that in 2000, Western Europe's vehicles per thousand people was about where the United States was in 1970, but by 2010 it is about where the United States was in 1972. The lower part of the graph (1900-1940) is shown enlarged on the facing page.

Figure 3.1. Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2000 and 2010)

## Source:

See Tables 3.4 and 3.5.

Though some countries are listed separately in this table, those countries are also included in the regional total. For instance, China is listed separately, but is also included in the Asia, Far East region.

The number of vehicles per thousand people in the United States has grown significantly from 1900 to 2007. In 2008 to 2010, however, the number decreased from a high of 843.57 in 2007.

Total vehicle-miles traveled increased slightly from 2009 to 2010. The trend of using two-axle, four-tire trucks, such as pickups, vans, and sport-utility vehicles, for personal travel is evident in these data; two-axle, four-tire trucks account for $25.8 \%$ more travel in 2010 than in 1970, and cars account for $30.3 \%$ less travel in that time period.

1970-2011: Ward's Communications, www.wardsauto.com.

Using current registration data and a scrappage model by Greenspan and Cohen, [1996 paper: http://www.federalreserve.gov/pubs/feds/1996/199640/199640pap.pdf], ORNL calculated car scrappage rates for 1970, 1980, and 1990. These data are fitted model values which assume constant economic conditions. Using 19772002 data, the Federal Highway Administration completed a separate survivability study in 2006.

Car registrations, along with vehicle travel and fuel use, all declined from 2008 to 2010. The data in this table from 1985-on DO NOT include minivans, pickups, or sport utility vehicles. Much of the data for 2009 were estimated; the FHWA no longer publishes travel and fuel data for cars.

Table 4.1
Summary Statistics for Cars, 1970-2010

| Year | Registrations ${ }^{\text {a }}$ (thousands) | Vehicle travel (million miles) | Miles (per vehicle) | Fuel use (million gallons) | Fuel economy ${ }^{\text {b }}$ (miles per gallon) |

[^27]Because data on Class $2 b$ trucks are scarce, the U.S. DOE funded a study to investigate available sources of data. In the final report, four methodologies are described to estimate the sales of Class $2 b$ trucks. Until another study is funded, the 1999 data are the latest available.

Davis, S.C. and L.F. Truett, Investigation of Class $2 b$ Trucks (Vehicles of 8,500 to 10,000 lbs GVWR), ORNL/TM2002/49, March 2002, Table 1.

Note: These data were calculated using Methodology 4 from the report.
${ }^{\text {a }}$ Estimates derived using 2000 population data and 1997 usage data. See source for details.

Car sales in 2009 and 2010 were below 6 million. In 1980, the Big 3 (Chrysler, Ford and General Motors) held $73.8 \%$ of the market; by 2011, that had dropped to $33.3 \%$.

${ }^{\text {a }}$ Includes all trucks of 10,000 pounds gross vehicle weight and less sold in the United States.
${ }^{\mathrm{b}}$ Excluding transplants.
${ }^{c}$ Big 3 includes Chrysler, Ford and General Motors.
${ }^{\mathrm{d}}$ Based on model year factory installations.
${ }^{e}$ Light-duty vehicles include cars and light trucks.
${ }^{\mathrm{f}}$ Indicates less than 1 percent.

The sales-weighted fuel economy of new cars (including wagons and non-truck SUVS) increased dramatically from 1975 ( 15.8 mpg ) to 1985 ( 26.9 mpg ), but rose only 1.9 mpg from 1985 to 2005. Since 2005, fuel economy rose 4.0 mpg-from 28.8 mpg in 2005 to 32.8 mpg in 2011.

U.S. Environmental Protection Agency, Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, March 2012. (Additional resources: www.epa.gov/otaq/fetrends.htm)

Sales of light trucks in 2011 are more than twice that of 1975. Similar to the car trend, the sales-weighted fuel economy of light trucks increased substantially during the late '70's and '80's, but has increased slowly until the mid-2000's. From 2005 to 2011, fuel economy rose from 21.0 mpg to 23.6 mpg . Some two-wheel drive SUVs are now classified as cars.

## Source:

U.S. Environmental Protection Agency, Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, March 2012. (Additional resources: www.epa.gov/otaq/fetrends.htm)

Note: Includes light trucks of $8,500 \mathrm{lbs}$. or less.
${ }^{a}$ No vehicles in this category were sold in this model year.

Light trucks were gaining market share from the early 1980s until 2004, mainly due to increases in the market share of sport utility vehicles (SUVs) and pickup trucks. A new category of SUVs has been added to the vehicle classification-non-truck SUVs. The non-truck SUVs are two-wheel drive SUVs that will be counted as cars in the Corporate Average Fuel Economy Standards for model years 2011-2016. A listing of the makes/models of non-truck SUVs is in Table 4.9.

${ }^{a}$ No vehicles in this category were sold in this model year.

The average light vehicle in 2009 contained more than 2,000 pounds of steel, most of it conventional steel. High and medium strength steel, however, made up more than $10 \%$ of the vehicle. The use of aluminum grew from 1995 to 2009, while the use of iron castings declined.

Ward's Communications, Ward's Motor Vehicle Facts and Figures, 2010, Detroit, MI, 2010, p. 65 and updates.

The number of franchised dealerships which sell new light-duty vehicles (cars and light trucks) has declined about $40 \%$ since 1970. The average number of vehicles sold per dealer in 2010 was 638 vehicles per dealer, down from a high of 779 vehicles per dealer in 2004.

${ }^{a}$ As of the beginning of the year.

The number of conventional refueling stations fell below 160,000 for the first time in the series history. The number of vehicles fueling at those stations fell in 2009 for the first time in several years but rose slightly in 2010. In 2010, there were 0.66 fueling stations per thousand vehicles or 1.51 thousand vehicles per station.

## Sources:

Conventional refueling stations: National Petroleum News Survey, 2011.
Conventional vehicles: The Polk Company, Detroit, MI, FURTHER REPRODUCTION PROHIBITED.
Notes: The County Business Patterns (CBP) data published by the Bureau of the Census tells the number of establishments by North American Industry Classification System (NAICS). NAICS is an industry classification system that groups establishments into industries based on the activities in which they are primarily engaged. NAICS 447 represents gasoline stations. However, the CBP gasoline station data differ from the National Petroleum News Survey data by as much as $30 \%$ ( 117,189 stations in 2005); the CBP may not include every gasoline retail outlet due to the classification of the primary activity of the business.

Alternative Fuel Refueling Stations are listed in Chapter 6.

The National Highway Traffic Safety Administration and the Environmental Protection Agency issued joint rulemaking to establish a new National Program to regulate fuel economy and greenhouse gas emissions for model year 2012-2016 cars and light trucks.

## Source:

Federal Register, Vol. 75, No. 88, May 7, 2010. (Additional resources: www.nhtsa.dot.gov/fuel-economy)

Note: The required fuel economy, along with projections of $\mathrm{CO}_{2}$ emissions, are shown here.

The target levels for the proposed fuel economy and carbon dioxide emission standards for vehicles manufactured in model years 2012-2016 are assigned based on a vehicle's "footprint." Each footprint has a different target. The vehicle footprint is calculated as:

$$
\text { footprint }=\text { track width } \times \text { wheelbase },
$$

where
track width = lateral distance between the centerlines of the base tires at ground, and wheelbase $=$ longitudinal distance between the front and rear wheel centerlines.

Table 4.20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016

| Vehicle type | Example models | Example model footprint (square feet) | $\begin{gathered} \hline \mathrm{CO}_{2} \text { emissions } \\ \text { target } \\ \text { (grams per mile) } \\ \hline \end{gathered}$ | Fuel economy target (miles per gallon) |

Note: Examples use model year 2008 vehicle specifications.

The Corporate Average Fuel Economy standards were established by the U.S. Energy Policy and Conservation Act of 1975 (PL94-163). These standards must be met at the manufacturer level. Some manufacturers fall short of meeting the standards while others exceed them. Legislation passed in December 2007 changed the CAFE standards beginning in the 2011 model year (MY). Some two-wheel drive sport utility vehicles are classified as cars under the final standards for MY 2011-2016.

[^35]Manufacturers of cars and light trucks whose vehicles do not meet the CAFE standards are fined. Data from the National Highway Traffic Safety Administration show CAFE fine collection dropped under $\$ 25$ million in 2002 and 2003; this was due to several factors, including the CAFE credit system, manufacturer mergers, and fines not being paid in the same year they were assessed. Fines for recent model years are still being collected.

Table 4.23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2010 ${ }^{\text {a }}$ (thousands)

[^36]Consumers must pay the Gas Guzzler Tax when purchasing a car that has an Environmental Protection Agency (EPA) fuel economy rating (combined city and highway) less than that stipulated in the table below. The Gas Guzzler Tax doubled in 1991 after remaining constant from 1986 to 1990. The tax has not changed since 1991. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans.

Table 4.24

[^37]Consumers continue to demand gas guzzling cars though fewer gas guzzlers were bought in model year 2010 than in the previous seven years. The IRS collected over $\$ 85$ million in 2010 from those buying cars with combined city/highway fuel economy less than 22.5 miles per gallon. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans. It is worthy to note that total revenue from fines paid by consumers to purchase gas-guzzling vehicles greatly exceeds the overall fines paid by manufacturers whose vehicles fail to meet CAFE standards (see Table 4.23).

${ }^{\text {a }}$ Adjusted using the Consumer Price Inflation Index.

The Powertrain System Analysis Toolkit (PSAT) provides vehicle simulations for a variety of research purposes. It is used by the Department of Energy to evaluate the fuel efficiency potential of advanced powertrain configurations for different driving conditions. Recently, PSAT was used to develop data on the relationship between speed and fuel economy.

Table 4.27
Fuel Economy by Speed, PSAT Model Results

Note: For specifications of the tested vehicles, please see Table 4.28.

This table shows the new methodology that the Environmental Protection Agency (EPA) used to determine fuel economy ratings for new vehicles beginning in model year 2008. In addition to the Urban Driving Cycle and the Highway Driving cycle, the EPA will also use three additional tests to adjust fuel economy ratings to account for higher speeds, air conditioner use, and colder temperatures. Though the EPA uses a complex combination of these five cycles to determine the fuel economy that will be posted on a new vehicle window sticker, the manufacturer's Corporate Average Fuel Economy is still calculated using only the city and highway driving cycles. To know more about new vehicle fuel economy ratings, visit www.fueleconomy.gov.

Table 4.30
Driving Cycle Attributes

|  | Test schedule |  |  |  |  |

[^40]These driving cycles simulate the performance of an engine while driving in the city and on the highway. Once the city cycle is completed, the engine is stopped, and then started again for the 8.5 minute hot start cycle. Three additional cycles also influence new vehicle fuel economy ratings beginning with the 2008 model year.

U.S. Department of Energy and Environmental Protection Agency, Fuel Economy Web site, www.fueleconomy.gov.

Beginning with the 2008 model year, this cycle influences the new vehicle fuel economy ratings. The US06 driving cycle was originally developed as a supplement to the Federal Test Procedure. It is a short-duration cycle (600 seconds) which represents hard-acceleration driving.

Figure 4.7. High-Speed (US06) Driving Cycle

## Source:

U.S. Department of Energy and Environmental Protection Agency, Fuel Economy Web site, www.fueleconomy.gov.

The Environmental Protection Agency also uses other driving cycles to test new vehicles (although these do not affect the fuel economy ratings). The New York Test Cycle was developed in the 1970's in order to simulate driving in downtown congested areas. The Representative Number Five Test Cycle was developed in the 1990's to better represent actual on-road driving by combining modern city and freeway driving.

Figure 4.8. New York City Driving Cycle

Figure 4.9. Representative Number Five Driving Cycle

Source:
Data obtained from Michael Wang, Argonne National Laboratory, Argonne, IL, 1997.

Researchers at Argonne National Laboratory have estimated the fuel economy of a midsize car using driving cycles from different countries. These results illustrate the difference in fuel economy which can be obtained from the same vehicle using different test cycles.

Table 4.31
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles

|  | Projected fuel economy <br> for a 1995 composite <br> midsize vehicle |
| :--- | :---: |
| Driving cycle | 17.5 mpg |
| Japanese 10/15 mode test cycle | 22.0 mpg |
| New European Driving Cycle (NEDC) | 19.8 mpg |
| U.S. EPA city cycle (LA4) | 32.1 mpg |
| U.S. EPA highway cycle | 23.9 mpg |
| U.S. Corporate Average Fuel Economy cycle |  |

Santini, D., A. Vyas, J. Anderson, and F. An, Estimating Trade-Offs along the Path to the PNGV $3 X$ Goal, presented at the Transportation Research Board $80^{\text {th }}$ Annual Meeting, Washington, DC, January 2001.

Note: China and India both use the European Driving Cycle, though India uses a modified version called the Modified Indian Driving Cycle which accounts for lower maximum speeds that better represent driving conditions in India.

[^41]When comparing data between countries, one must realize that different countries have different testing cycles to determine fuel economy and emissions. This table compares various statistics on the European, Japanese, and U.S. testing cycles [for fuel economy measurements, the United States uses the formula, 1/fuel economy = (0.55/city fuel
 than on the European or Japanese cycles.

Table 4.32

## Comparison of U.S., European, and Japanese Driving Cycles

|  | Time (seconds) | Percent of time stopped or decelerating | Distance (miles) | Average speed (mph) | Maximum <br> speed <br> (mph) | Maximum acceleration ( $\mathrm{mph} / \mathrm{s}$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Japanese 10/15 mode test cycle | 631 | 52.3 | 2.6 | 14.8 | 43.5 | 1.8 |
| New European Driving Cycle (NEDC) | 1,181 | 24.9 | 6.84 | 20.9 | 74.6 | 2.4 |
| U.S. EPA city cycle $(\mathrm{LA} 4)^{\mathrm{a}}$ | 1,372 | 43.2 | 7.5 | 19.5 | 56.7 | 3.3 |
| U.S. EPA highway cycle | 765 | 9.3 | 17.8 | 48.2 | 59.9 | 3.3 |
| U.S. Corporate Average Fuel Economy cycle | 2,137 | 27.9 | 10.3 | 29.9 | 59.9 | 3.3 |

[^42]Demand response vehicles (also called paratransit or dial-a-ride) are widely used by transit agencies. The vehicles do not operate over a fixed route or on a fixed schedule. The vehicle may be dispatched to pick up several passengers at different pick-up points before taking them to their respective destinations and may even be interrupted en route to these destinations to pick up other passengers. Demand response service is provided primarily by vans. In 2007, the data changed substantially due to improved estimation methodologies. Unfortunately, those data are no longer comparable to the rest of the historical series.

Table 4.33
Summary Statistics on Demand Response Vehicles, 1994-2010

|  | Number <br> of <br> agencies | Number of active <br> vehicles | Vehicle-miles <br> (millions) | Average <br> miles per <br> vehicle | Passenger- <br> miles <br> (millions) | Energy use <br> (trillion Btu) |

## Chapter 5 <br> Heavy Vehicles and Characteristics

Summary Statistics from Tables in this Chapter

| Source |  |  |
| :---: | :---: | ---: |
| Table 5.1 | Class 3-8 single-unit trucks, 2010 | 8,217 |
|  | Registration (thousands) | 110,674 |
|  | Vehicle miles (millions) | 7.3 |
| Table 5.2 | Fuel economy (miles per gallon) |  |
|  | Class 7-8 combination trucks, 2010 | 2,553 |
|  | Registration (thousands) | 175,911 |
|  | Vehicle miles (millions) | 5.9 |
| Tables 5.14 | Freight Shipments, 2007 Commodity Flow Survey |  |
| and 5.15 | Value (billion dollars) | 11,685 |
|  | Tons (millions) | 12,543 |
|  | Ton-miles (billions) | 3,345 |
| Table 5.16 | Transit buses in operation, 2010 | 66,810 |

Class 3-8 single-unit trucks include trucks over 10,000 lbs. gross vehicle weight with the cab/engine and cargo space together as one unit. Most of these trucks would be used for business or for individuals with heavy hauling or towing needs. Very heavy single-units, such as concrete mixers and dump trucks, are also in this category. The data series was recently changed by the FHWA back to 2007.

Table 5.1
Summary Statistics for Class 3-8 Single-Unit Trucks, 1970-2010

| Year | Registrations (thousands) | Vehicle travel (million miles) | Average annual miles per vehicle | $\qquad$ | Fuel economy (miles per gallon) |

${ }^{\text {a }}$ Due to FHWA methodology changes, data from 2007-on are not comparable with previous data.

Class 7-8 combination trucks include all trucks designed to be used in combination with one or more trailers with a gross vehicle weight rating over $26,000 \mathrm{lbs}$. The average vehicle travel of these trucks (on a per truck basis) far surpasses the travel of other trucks due to long-haul freight movement. The data series was recently changed by the FHWA back to 2007.

${ }^{\mathrm{d}}$ 1987-2011.

The Census Bureau has discontinued the Vehicle Inventory and Use Survey; it was not conducted in 2007. The 2002 data remain the latest available.

## Vehicle Inventory and Use Survey

The Vehicle Inventory and Use Survey (VIUS), which was formerly the Truck Inventory and Use Survey (TIUS), provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in each state. In 1997, the survey was changed to the Vehicle Inventory and Use Survey due to future possibilities of including additional vehicle types. The 2002 VIUS, however, only includes trucks. Copies of the 2002 VIUS report or CD may be obtained by contacting the U.S. Bureau of the Census, Transportation Characteristics Surveys Branch (301) 457-2797. Internet site:
www.census.gov/svsd/www/tiusview.html

Since 1987, the survey has included minivans, vans, station wagons on truck chassis, and sport utility vehicles in addition to the bigger trucks. The 1977 and 1982 surveys did not include those vehicle types. The estimated number of trucks that were within the scope of the 2002 VIUS and registered in the United States as of July 1, 2002 was 85.2 million. These trucks were estimated to have been driven a total of 1,115 billion miles during 2002, an increase of $6.8 \%$ from 1997. The average annual miles traveled per truck was estimated at 13,100 miles.

In the 2002 VIUS, there are several ways to classify a truck by weight. The survey respondent was asked the average weight of the vehicle or vehicle-trailer combination when carrying a typical payload; the empty weight (truck minus cargo) of the vehicle as it was usually operated; and the maximum gross weight at which the vehicle or vehicle-trailer combination was operated. The Census Bureau also collected information on the Gross Vehicle Weight Class of the vehicles (decoded from the vehicle identification number) and the registered weight of the vehicles from the State registration files. Some of these weights are only provided in categories, while others are exact weights. Since all these weights could be quite different for a single truck, the tabulations by weight can be quite confusing. In the tables presented here, the Gross Vehicle Weight Class was used.

Table 5.4
Truck Statistics by Gross Vehicle Weight Class, 2002

| Manufacturer's gross vehicle weight class | Number of trucks | Percentage of trucks | Average annual miles per truck | Harmonic mean fuel economy | Percentage of fuel use |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1) $6,000 \mathrm{lbs}$ and less | 51,941,389 | 61.0\% | 11,882 | 17.6 | 42.7\% |

## Sources:

Estimates are based on data provided on the following public use files: U.S. Department of Commerce, Bureau of the Census, Census of Transportation, Washington, DC, 1992 Truck Inventory and Use Survey, 1995; 1997 Vehicle Inventory and Use Survey, 2000, and 2002 Vehicle Inventory and Use Survey, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

Note: Based on average fuel economy as reported by respondent.

As expected, most light trucks travel within 50 miles of their home base and refuel at public stations. About sixty percent of heavy trucks travel over 50 miles from their home base and $36 \%$ of them refuel at central companyowned refueling stations.

## Source:

U.S. Department of Commerce, Bureau of the Census, 2002 Vehicle Inventory and Use Survey, Microdata File on CD, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

The figure below shows the distribution of annual travel the two types of Class 7 and 8 vehicles-combination units (separate tractor and trailer) and single units (tractor and trailer on a single chassis). This information is for vehicles two years old or less and comes from the 2002 VIUS. Combination trucks, dominated by box-type trailers, display the greatest amount of annual travel of all heavy vehicle types, as is evidenced both by the range of annual use which is up to 250,000 miles per year, and the peaking that occurs in the 100,000 to 140,000-mile segments. Most of the single-unit trucks in the survey travel 40,000 miles per year or less.

Figure 5.1. Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled

## Source:

U.S. Department of Commerce, Bureau of the Census, 2002 Vehicle Inventory and Use Survey, Microdata File on CD, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

Note: Heavy trucks (class $7 \& 8$ ) are greater than 26,000 pounds gross vehicle weight based on the manufacturer's rating.

The latest Vehicle Inventory and Use Survey asked truck owners if the truck had certain features as permanent equipment on the truck. Some of the features asked about were onboard computers, idle-reduction devices, navigational systems, and Internet access. Of the 2.3 million heavy trucks (class 7 \& 8) in the United States, nearly $10 \%$ were equipped with onboard computers that had communication capabilities and another $5 \%$ had onboard computers without communication capabilities. Six percent of heavy trucks were equipped with idle-reducing technology. Navigational systems and Internet access were available in less than one percent of heavy trucks.

Figure 5.2. Share of Heavy Trucks with Selected Electronic Features, 2002

## Source:

U.S. Department of Commerce, Bureau of the Census, 2002 Vehicle Inventory and User Survey, Microdata File on CD, 2005.

Note: Heavy trucks (class $7 \& 8$ ) are greater than 26,000 pounds gross vehicle weight based on the manufacturer's rating.

## Fuel Economy Study for Class 8 Trucks

As part of a long-term study sponsored by the U.S. Department of Energy (DOE) Office of Vehicle Technologies (OVT), the Oak Ridge National Laboratory (ORNL) in conjunction with several industry partners has collected data and information related to heavy-truck operation in real-world highway environments. The primary objective of the project was to collect real-world performance and spatial data for long-haul operations of Class 8 tractor-trailers from a fleet engaged in normal freight operations. Six model year 2005 Class 8 trucks from the selected fleet, which operates within a large area of the country extending from the east coast to Mountain Time Zone and from Canada to the US-Mexican border, were instrumented and 60 channels of data were collected for over a year at a rate of 5 Hz (or 5 readings per second). Those channels included information such as instantaneous fuel rate, engine speed, gear ratio, vehicle speed, and other information read from the vehicle's databus; weather information (wind speed, precipitation, air temperature, etc.) gathered from an on-board weather station; spatial information (latitude, longitude, altitude) acquired from a GPS (Global Positioning System) device; and instantaneous tractor and trailer weight obtained from devices mounted on the six participating tractors and ten trailers. Three of the six instrumented tractors and five of the ten instrumented trailers were mounted with New Generation Single Wide-Based Tires and the others with regular dual tires. Over the duration of this phase of the project (just over a year) the six tractors traveled nearly 700,000 miles.

To find out more about this project, contact Oscar Franzese, franzeseo@ornl.gov, 865-946-1304. The final report on this project is available on-line at: cta.ornl.gov/cta/Publications/Reports/ORNL_TM_2008-122.pdf.

The type of terrain a truck is traveling on can cause significant differences in fuel efficiency. This study (see page 5-13 for project description) shows fuel economy on severe upslopes is less than half that on flat terrain. On severe downslopes, the fuel economy was two times higher than on flat terrain.

Table 5.10
Effect of Terrain on Class 8 Truck Fuel Economy

| Type of terrain | Share of data records | Average fuel efficiency (mpg) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | All trucks | Tractors with dual tires | Tractors with single (wide) tires | Difference between dual and single tires (percent) |
| Severe upslope ( $>4 \%$ ) | 0.7\% | 2.90 | 2.86 | 2.94 | 2.91\% |
| Mild upslope ( $1 \%$ to 4\%) | 13.2\% | 4.35 | 4.25 | 4.44 | 4.35\% |
| Flat terrain (1\% to 1\%) | 72.4\% | 7.33 | 7.08 | 7.58 | 7.13\% |
| Mild downslope (-4\% to -1\%) | 12.6\% | 15.11 | 14.64 | 15.57 | 6.36\% |
| Severe downslope ( $<-4 \%$ ) | 1.1\% | 23.5 | 21.82 | 25.3 | 15.97\% |

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascurain, and Pedro Otaduy. Class- 8 Heavy Truck Duty Cycle Project Final Report, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008. (Additional resources: cta.ornl.gov/cta/publications.shtml\#2008)

This table presents a distribution of distance traveled, fuel consumed, and fuel economy by speed and by type of tires for the vehicles participating in the project (see page 5-13 for project description). The speed bins are divided into 5 -mile intervals, going from $0+m p h$ (i.e., speed $>0.00 \mathrm{mph}$ ) to 85 mph , while the four main columns of the table are organized by the type of tires that were mounted on the tractor and trailers. The first row of the table contains information about fuel consumed while the vehicle was idling (i.e., the vehicle was static with the engine on) with the following rows presenting information about the distance traveled, fuel consumed, and fuel economy for each one of the speed intervals. The next-to-the-last row shows the totals for both traveled distances and fuel consumed as well as the overall fuel economy for each tire-combination category. The latter are then used to compute the percentage difference in terms of fuel economy from dual tire tractors and trailers, which is the most common tire setup for large trucks at the present time.

Table 5.11
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascurain, and Pedro Otaduy. Class-8 Heavy Truck Duty Cycle Project Final Report, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008. (Additional resources: cta.ornl.gov/cta/publications.shtml\#2008)

Note: These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

[^46]The fuel economy information presented in Table 5.11 is on the upper limits of today's large-truck fleets and is mostly a result of driver training and the extensive vehicle maintenance (including constant tire pressure) to which the fleet company participating in this project adheres. Nevertheless, the results of this extensive test indicate that there are substantial gains in terms of fuel economy for large trucks when single (wide) tires are used in combination with dual tires or alone (best case). Figure 5.3 shows the information from Table 5.10 in a graphical form (bars) and also displays for each speed bin the percentage of the total distance that is traveled at that speed (line). It is possible to observe that above $80 \%$ of the distance traveled by long-haul Class 8 trucks is done at speeds above 55 mph . Therefore, any gains in fuel economies at these speeds derived from a given tire combination would have a very large impact on the overall fuel economy of these types of trucks. Figure 5.3 shows that, except for the $D-S$ combination within the $65+$ to 70 mph , the combinations with all single (wide) tires perform better and, therefore, obtain the largest overall fuel economy.

Figure 5.3. Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed

NOT ADJUSTED FOR TERRAIN: See note below.

## Source:

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascurain, and Pedro Otaduy. Class-8 Heavy Truck Duty Cycle Project Final Report, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Note: $\mathrm{D}=$ Dual tire. $\mathrm{S}=$ Single (wide) tire.
These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

This graph presents for each one of the four tire-combination categories the percent of total fuel that is consumed when traveling at different speeds (bars) as well as the average percent of fuel consumed for each speed bin (line). As opposed to Table 5.10, the total fuel consumed on this graph includes the fuel consumed while idling.

Figure 5.4. Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination

NOT ADJUSTED FOR TERRAIN: See note below.

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascurain, and Pedro Otaduy. Class-8 Heavy Truck Duty Cycle Project Final Report, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Note: $\mathrm{D}=$ Dual tire. $\mathrm{S}=$ Single (wide) tire.
These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

A typical class 8 truck tractor weighs about 17,000 lbs. The powertrain is nearly a quarter of the weight (24\%) while the truck body structure is $19 \%$.

Table 5.12
Class 8 Truck Weight by Component

|  | Pounds | Share of total |
| :--- | ---: | :---: |
| Wheels and tires | 1,700 | $10 \%$ |
| Chassis/frame | 2,040 | $12 \%$ |
| Drivetrain and suspension | 2,890 | $17 \%$ |
| Misc. accessories/systems | 3,060 | $18 \%$ |
| Truck body structure | 3,230 | $19 \%$ |
| Powertrain | 4,080 | $24 \%$ |
| Total | 17,000 | $100 \%$ |

## Source:

National Academy of Sciences, Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles, prepublication copy, March 2010, p. 5-42.

## Notes:

- Powertrain includes engine and cooling system, transmission and accessories.
- Truck body structure includes cab-in-white, sleeper unit, hood and fairings, interior and glass.
- Miscellaneous accessories/systems include batteries, fuel system, and exhaust hardware.
- Drivetrain and suspension includes drive axles, steer axle, and suspension system.
- Chassis/frame includes frame rails and crossmembers, fifth wheel and brackets. Wheels and tires include a set of 10 aluminum wheels, plus tires.

The gross weight of a vehicle (GVW) is the weight of the empty vehicle plus the weight of the maximum payload that the vehicle was designed to carry. In cars and small light trucks, the difference between the empty weight of the vehicle and the GVW is not significantly different (1,000 to 1,500 lbs). The largest trucks and tractor-trailers, however, have a payload capacity share of $200 \%$, which means they can carry $200 \%$ of their empty weight. The medium-sized trucks (truck classes 3-6) have payload capacity shares between $50 \%$ and $100 \%$.

Table 5.13
Gross Vehicle Weight vs. Empty Vehicle Weight

| Vehicle description | Truck class | Gross vehicle weight range (pounds) | Empty vehicle weight range (pounds) | Maximum payload capacity (pounds) | Payload capacity share (percent of empty weight) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Cars |  | 3,200-6,000 | 2,400-5,000 | 1,000 | 20\% |
| Minivans, small SUVs, small pick-ups | 1 | 4,000-2,400 | 3,200-4,500 | 1,500 | 33\% |
| Large SUVs, standard pickups | 2a | 6,001-8,500 | 4,500-6,000 | 2,500 | 40\% |
| Large SUVs, standard pickups | 2b | 8,501-10,000 | 5,000-6,300 | 3,700 | 60\% |
| Utility van, multi- purpose, mini-bus, step van | 3 | 10,001-14,000 | 7,650-8,750 | 5,250 | 60\% |
| City delivery, parcel delivery, large walk-in, bucket, landscaping | 4 | 14,001-16,000 | 7,650-8,750 | 7,250 | 80\% |
| City delivery, parcel delivery, large walk-in, bucket | 5 | 16,001-19,500 | 9,500-10,000 | 8,700 | 80\% |
| City delivery, school bus, large walk-in, bucket | 6 | 19,501-26,000 | 11,500-14,500 | 11,500 | 80\% |
| City bus, furniture, refrigerated, refuse, fuel tanker, dump, tow, concrete, fire engine, tractor-trailer | 7 | 26,001-33,000 | 11,500-14,500 | 18,500 | 125\% |
| Refuse, concrete, furniture, city bus, tow, fire engine (straight trucks) | 8a | 33,001-80,000 | 20,000-26,000 | 54,000 | 200\% |
| Tractor-trailer: van, refrigerated, bulk tanker, flat bed (combination trucks) | 8b | 33,001-80,000 | 20,000-26,000 | 54,000 | 200\% |

## Source:

National Academy of Sciences, Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles, prepublication copy, March 2010, pp. 2-2 and 5-42.

According to weigh-in-motion data collected by fifteen states, the majority of 5-axle tractor-trailers on the road weigh between 33,000 and $73,000 \mathrm{lbs}$. Eleven percent of the tractor-trailers had weight recorded around $72,800 \mathrm{lbs}$ and $10 \%$ around $68,300 \mathrm{lbs}$. Another $10 \%$ of tractor-trailers were on the lighter end of the scale - around 37,500 lbs. These data show that only a small percent of trucks on the road are near the maximum roadway gross vehicle weight of $80,000 \mathrm{lbs}$. Thus, most trucks are filling the trailer space to capacity (cubing-out) before they reach the maximum weight limit (weighing-out).

Note: Data are from these 15 States: California, Connecticut, Florida, Georgia, Hawaii, Iowa, Minnesota, Missouri, Montana, North Carolina, Oregon, Pennsylvania, South Dakota, Texas, and Washington.
${ }^{\text {a }}$ Study reported data on 5 -axle tractor-trailers which are class 8 trucks. Single-unit class 8 trucks were not considered in the study.

## Commodity Flow Survey

The Commodity Flow Survey (CFS) is designed to provide data on the flow of goods and materials by mode of transport. The 1993, 1997, 2002, and 2007 CFS are a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and include major improvements in methodology, sample size, and scope. The 2007 CFS covers business establishments with paid employees that are located in the United States and are classified using the North American Industry Classification System (NAICS) in mining, manufacturing, wholesale trade, and select retail trade industries, namely, electronic shopping and mail-order houses. Establishments classified in services, transportation, construction, and most retail industries are excluded from the survey. Farms, fisheries, foreign establishments, and most government-owned establishments are also excluded. ${ }^{\text {a }}$

The 1993, 1997, 2002, and 2007 CFS differ from previous surveys in their greatly expanded coverage of intermodalism (i.e., shipments which travel by at least two different modes, such as rail and truck). Earlier surveys reported only the principal mode. Route distance for each mode for each shipment was imputed using methodologies developed by Oak Ridge National Laboratory. Distance, in turn, was used to compute ton-mileage by mode of transport.

The data can be viewed at: www.bts.gov/publications/commodity_flow_survey.

[^47]Industries covered by the 2007 Commodity Flow Survey (CFS) shipped over 12 billion tons of goods worth over $\$ 11$ trillion. Compared to the 1997 CFS, the value of shipments is up $1.3 \%$ per year and tons shipped are up $1.6 \%$ per year. By value, intermodal shipments increased 4.7\% per year from 1997 to 2007.

a "Truck" as a single mode includes shipments which went by private truck only, for-hire truck only, or a combination of private truck and for-hire truck.
${ }^{\text {b }}$ CFS data for pipeline exclude most shipments of crude oil.
${ }^{\text {c }}$ Denotes data do not meet publication standards because of high sampling variability or other reasons. Some unpublished estimates can be derived from other data published in this table. However, figures obtained in this manner are subject to these same limitations.

In 2007, the data changed substantially due to improved estimation methodologies. Unfortunately, those data are no longer comparable to the rest of the historical series.

Table 6.1 Alternative fuel vehicles in use, $2010 \quad 938,642$
E85 618,505
$L P G$ 143,037
CNG 115,863
Electric 57,462
$L N G$ 3,354
M85 0
Table 6.6 Number of alternative fuel refuel sites, $2012 \quad 14,086$
LPG
2,670
$C N G \quad 988$
Electric 7,197
Biodiesel 630
Hydrogen 56

Fuel type abbreviations are used throughout this chapter.
$B 20=20 \%$ biodiesel, $80 \%$ petroleum diesel
$C N G=$ compressed natural gas
E85 = 85\% ethanol, $15 \%$ gasoline
E95 = 95\% ethanol, 5\% gasoline
$\mathrm{H}_{2}=$ hydrogen
$L N G=$ liquefied natural gas
$L P G=$ liquefied petroleum gas
M85 = 85\% methanol, $15 \%$ gasoline
M100 $=100 \%$ methanol

## Alternative Fuels

The Energy Policy Act of 1992 defines alternative fuels and allows the U.S. Department of Energy (DOE) to add to the list of alternative fuels if the fuel is substantially nonpetroleum, yields substantial energy security benefits, and offers substantial environmental benefits. DOE currently recognizes the following as alternative fuels:

- methanol, ethanol, and other alcohols,
- blends of $85 \%$ or more of alcohol with gasoline,
- natural gas and liquid fuels domestically produced from natural gas,
- liquefied petroleum gas (propane),
- coal-derived liquid fuels,
- hydrogen,
- electricity,
- biodiesel (BIOO),
- fuels (other than alcohol) derived from biological materials,
- $P$-series.

## Alternative Fuels \& Advanced Vehicles Data Center

DOE established the Alternative Fuels Data Center (AFDC) in 1991 to support its work aimed at fulfilling the Alternative Motor Fuels Act directives. Since then, the AFDC has expanded its focus to include all advanced transportation fuels, vehicles, and technologies. It has been renamed the Alternative Fuels \& Advanced Vehicles Data Center to reflect this broader scope. The AFDC is operated and managed by the National Renewable Energy Laboratory (NREL) in Golden, Colorado.

The purposes of the AFDC are:

- to gather and analyze information on the fuel consumption, emissions, operation, and durability of alternative fuel vehicles, and
- to provide unbiased, accurate information on alternative fuels and alternative fuel vehicles to government agencies, private industry, research institutions, and other interested organizations.

Much of the AFDC data can be obtained through their Web site: www.afdc.energy.gov. Several tables and graphs in this chapter contain statistics which were generated by the AFDC. Below are some links to specific areas of the AFDC Web site.

Alternative \& Advanced Fuels - http://www.afdc.energy.gov
Alternative Fueling Station Locator - http://www.afdc.energy.gov/afdc/locator/stations/
Alternative \& Advanced Vehicles - http://www.afdc.energy.gov/afdc/vehicles/index.html
Fleet Information - http://www.afdc.energy.gov/afdc/fleets/index.html
State \& Federal Incentives \& Laws - http://www.afdc.energy.gov/afdc/laws/
Data Analysis \& Trends - http://www.afdc.energy.gov/afdc/data/index.html

There are over 938,000 alternative fuel vehicles in the United States, not including flex-fuel E85 vehicles which operate mainly on gasoline. The E85 vehicles in this table are those believed to be regularly fueled with E85.

U. S. Department of Energy, Energy Information Administration, Alternatives to Traditional Transportation Fuels, 2010, Washington, DC, May 2012, Web site www.eia.gov/renewable/afv/. 1995-2006, Annual Energy Review, Table 10.4. Estimated Number of Alternative-Fueled Vehicles in Use and Replacement Fuel Consumption.
${ }^{a}$ Vehicles in Use represent accumulated acquisitions, less retirements, as of the end of each calendar year. They do not include concept and demonstration vehicles.
${ }^{\mathrm{b}}$ Includes only those E85 vehicles believed to be used as alternative-fuels vehicles (AFVs), primarily fleetoperated vehicles; excludes other vehicles with E85-fueling capability. In 1997, some vehicle manufacturers began including E85-fueling capability in certain model lines of vehicles. For 2007, the Energy Information Administration (EIA) estimates that the number of E85 vehicles that are capable of operating on E85, motor gasoline, or both, is about 7.1 million. Many of these AFVs are sold and used as traditional gasoline-powered vehicles.
${ }^{\mathrm{c}}$ Excludes HEVs.

Trollybus, heavy rail, and light rail use nearly all alternative fuels. However, the $33.5 \%$ of buses using alternative fuels replace a lot of traditional fuel use. Rail transit vehicles have the highest average age.

Table 6.2
Alternative Fuel Transit Vehicles, 2010

|  | Average <br> age | Percent <br> powered by <br> alternative fuels | Number <br> of <br> vehicles |
| :--- | :---: | :---: | :---: |
| Mode | 7.5 | $33.5 \%$ | 66,239 |
| Bus | 20.5 | $11.3 \%$ | 6,927 |
| Commuter rail | 17.8 | $47.6 \%$ | 196 |
| Ferry boat | 21.9 | $100.0 \%$ | 11,510 |
| Heavy rail | 15.8 | $98.3 \%$ | 2,104 |
| Light rail | 3.5 | $8.0 \%$ | 66,621 |
| Paratransit | 8.9 | $100.0 \%$ | 571 |
| Trolleybus | 4.0 | $\mathrm{a} \%$ | 12,378 |

## Source:

U.S. Department of Energy, Alternative Fuels Data Center Web site, www.afdc.energy.gov/afdc/fuels/stations_counts.html, February 2012.
${ }^{\text {a }}$ Totals by State is the total number of fuel types available at stations. Stations are counted once for each type of fuel available.

Clean Cities is a locally-based government/industry partnership, coordinated by the U.S. Department of Energy to expand the use of alternatives to gasoline and diesel fuel. By combining the decision-making with voluntary action by partners, the "grass-roots" approach of Clean Cities departs from traditional "top-down" Federal programs.

# Vehicle Technologies Program 

## www.eere.energy.gov/vehiclesandfuels

The Vehicle Technologies Program is administered by the Department of Energy's Office of Energy Efficiency and Renewable Energy. The mission of this program is to develop more energy efficient and environmentally friendly highway transportation technologies that enable America to use less petroleum. The long-term aim is to develop "leap frog" technologies that will provide Americans with greater freedom of mobility and energy security, with lower costs and lower impacts on the environment. For additional information about the Vehicle Technologies Program, visit the Web site listed above.

## Hydrogen Analysis Resource Center

## hydrogen.pnl.gov/

The Hydrogen Analysis Resource Center was developed to provide reliable data and information for hydrogen-related analytical activities. The Center's Web site includes:

- Hydrogen Data Book - contains a wide range of factual information on hydrogen and fuel cells. hydrogen.pnl.gov/cocoon/morf/hydrogen/article/103.
- Hydrogen Glossary - contains acronyms and terms used commonly in the Hydrogen Analysis Resource Center.
- Related Sites - provides links to other sites with data relevant to hydrogen and fuel cell analysis.
- Guidelines and Assumptions for DOE Hydrogen Program Analysis - contains guidelines for conducting analysis (under development) and assumptions.
- Calculator Tools - provides tools to perform conversions of hydrogen and other calculations relevant to hydrogen and fuel cells.
- Analysis Tools - provides links to models and other tools relevant to hydrogen and fuel cells, such as H2A, GREET, PSAT, VISION, MOVES, and other transportation and energy models.

Table 6.7
Properties of Conventional and Alternative Fuels

| Property | Gasoline | No. 2 diesel | Methanol | Ethanol |
| :--- | :---: | :---: | :---: | :---: |

| Figure 7.2 | Average annual miles per Federal Government | 24,384 |
|  | fleet vehicle, 2011 |  |
|  | Sedans | 11,070 |
|  | SUVs | 9,961 |
|  | Buses | 9,784 |
|  | Heavy trucks | 7,932 |
|  | Medium trucks | 7,008 |
|  | Light trucks | 6,516 |
|  | Ambulances | 5,689 |
|  | Table 7.4 | Federal government vehicles, FY 2011 |
|  | Light trucks (<8,500 lbs. GVW) | 655,989 |
|  | Cars and other passenger vehicles | 285,296 |
|  | Medium trucks (8,500-26,000 lbs. GVW) | 245,528 |
|  | Heavy trucks $(>26,000$ lbs. GVW) | 81,791 |
|  | Buses and ambulances | 33,951 |
|  |  | 9,423 |

Vehicles in fleets of 15 or more are counted as fleet vehicles, as well as vehicles in fleets where five or more vehicles are purchased annually. Historical data on fleets are not available due to definitional changes of what constitutes a fleet.

Figure 7.1. Fleet Vehicles in Service as of January 1, 2011

## Source:

Bobit Publishing Company, Automotive Fleet Research Department, Automotive Fleet Factbook 2010-2011, Redondo Beach, CA, 2012. (Additional resources: www.fleet-central.com)
${ }^{\text {a }}$ Taxi category includes vans.
${ }^{\mathrm{b}}$ Rental category includes vans and sports utility vehicles under cars, not trucks
${ }^{c}$ Fleets of 15 or more in operation or 5 or more fleet vehicles purchased annually.

Rental companies made the largest light fleet vehicle registrations in 2010 buying over 1.5 million vehicles, most of them cars ( $62.5 \%$ ). Only $30.3 \%$ of the new commercial fleet registrations were cars.

Table 7.1
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010

|  | Commercial | Rental | Government | Total |
| :--- | :---: | ---: | :---: | :---: |
| Cars | $30.3 \%$ | $62.5 \%$ | $41.1 \%$ | $53.2 \%$ |
| Pickup trucks | $28.6 \%$ | $3.6 \%$ | $25.1 \%$ | $11.2 \%$ |
| Vans | $19.6 \%$ | $14.0 \%$ | $17.8 \%$ | $15.6 \%$ |
| Sport utility vehicles | $21.5 \%$ | $19.8 \%$ | $16.0 \%$ | $19.9 \%$ |
| Total | 528,169 | $1,549,903$ | 186,680 | $2,264,752$ |

## Chapter 8 <br> Household Vehicles and Characteristics

Summary Statistics from Tables/Figures in this Chapter

| Source |  |  |
| :---: | :---: | :---: |
| Table 8.2 | Vehicles per capita, 2010 | 0.777 |
|  | Vehicles per licensed driver, 2010 | 1.14 |
|  | Vehicles per household, 2010 | 1.79 |
| Table 8.3 | Average household transportation expense, 2010 | 16.0\% |
| Table 8.5 | Share of households owning 3 or more vehicles |  |
|  | 1960 | 2.5\% |
|  | 1970 | 5.5\% |
|  | 1980 | 17.5\% |
|  | 1990 | 17.3\% |
|  | 2000 | 18.3\% |
|  | 2010 | 19.5\% |
| Figure 8.1 | Average occupancy rates by vehicle type, 2009 |  |
|  | Pickup Truck | 1.49 |
|  | Car | 1.55 |
|  | Sports Utility | 1.90 |
|  | Van | 2.35 |
| Table 8.10 | Average annual miles per household vehicle, 2009 | 11,300 |
| Table 8.16 | Share of workers who car pooled, 2010 | 10.4\% |
| Table 8.21 | Long-distance trips in the United States, 2001 |  |
|  | Person-trips | 2,554 million |
|  | Person-miles | 1,138 billion |

The number of vehicles in the United States is growing faster than the population. The growth in vehicle-miles has slowed in recent years. See Table 8.2 for vehicles per capita and vehicle-miles per capita.

${ }^{\text {a }}$ Public assistance monies are included in reported income. Data for those reporting income.
${ }^{b}$ Percentages may not sum to totals due to rounding.
${ }^{\text {c }}$ Includes alcoholic beverages.
${ }^{\mathrm{d}}$ Includes personal care, reading, education, tobacco and smoking supplies, cash contributions, and miscellaneous items.
${ }^{\text {e }}$ The term household refers to a "consumer unit," which is defined differently than households on Table 8.1.

The average amount of money that a household spends in a year has gone from \$23,976 in 1985 to \$48,109 in 2010. Expenditures on transportation were $19.4 \%$ of the total in 1985, but were $16.0 \%$ in 2010 . Vehicle purchases made up one-third of transportation expenditures in 2010, while gas and oil were $27.8 \%$.

${ }^{a}$ Other vehicle expenses include vehicle finance charges, maintenance and repairs, insurance, licenses, and other vehicle charges.

Household vehicle ownership shows a dramatic increase from 1960 to 1990. In 1960, nearly 79\% of households owned less than two vehicles; by 1990, it declined to $45 \%$. Census data prior to 1990 indicated that the majority of households owned one vehicle; in 1990 that changed to two vehicles.

Table 8.5

## 2009 National Household Travel Survey Daily Trip Data

The Department of Transportation (DOT) collected data on daily trips in 1969, 1977, 1983, 1990 and 1995 via the Nationwide Personal Transportation Survey (NPTS). For 2001, the DOT combined the collection of long trip and daily trip data into one survey - the 2001 National Household Travel Survey (NHTS). The long trip data were not included in the 2009 NHTS.

The NHTS is the nation's inventory of daily travel. The survey includes demographic characteristics of households, people, vehicles, and detailed information on daily travel for all purposes by all modes. NHTS survey data are collected from a sample of U.S. households and expanded to provide national estimates of trips and miles by travel mode, trip purpose, and a host of household attributes.

The NHTS was designed to continue the NPTS series, but as with all data surveys, caution should be used when comparing statistics from one survey to another due to changes in terminology, survey procedures, and target population. The 2001 and 2009 surveys collected data on trips of children under 5 years of age, while the previous NPTS did not. Improved methodologies first used in the collection of trip information in the 1995 NPTS make it difficult to compare these data with past NPTS survey data. Thus, the 1990 NPTS trip data have been adjusted to make it comparable with the later surveys.

Table 8.6
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS

|  |  |  |  |  |  |  | Percent <br> change <br> $1969-2009$ |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Workers per household | 1.21 | 1.23 | 1.21 | 1.27 | 1.33 | 1.35 | 1.34 | $11 \%$ |
| Licensed drivers per household | 1.65 | 1.69 | 1.72 | 1.75 | 1.78 | 1.77 | 1.88 | $14 \%$ |
| Vehicles per worker | 0.96 | 1.29 | 1.39 | 1.40 | 1.34 | 1.39 | 1.40 | $46 \%$ |
| Vehicles per licensed driver | 0.70 | 0.94 | 0.98 | 1.01 | 1.00 | 1.06 | 1.00 | $42 \%$ |
| Average vehicle trip length (miles) | 8.89 | 8.34 | 7.90 | 8.98 | 9.06 | 9.87 | 9.72 | $9 \%$ |

## Sources:

U.S. Department of Transportation, Federal Highway Administration, 1990 Nationwide Personal Transportation Survey: Summary of Travel Trends, FHWA-PL-92-027, Washington, DC, March 1992, Table 2. Data for 1995, 2001 and 2009 were generated from the Web site nhts.ornl.gov. (Additional resources: www.fhwa.dot.gov)

Note: Average vehicle trip length for 1990 and 1995 is calculated using only those records with trip mileage information present. The 1969 survey does not include pickups and other light trucks as household vehicles. Data on vehicles per household and licensed drivers per household will not match Table 8.2.

Due to methodology improvements in collecting trip information, the 2001 and 1995 data should be compared only to the 1990 adjusted data. The original 1990 data are comparable to all previous surveys; however, comparisons should always be made with caution because of differing survey methodologies.

(Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

[^54]In 2001 and 2009 vehicle-miles traveled (vmt) for a three-person household is around 28,000 miles. The number of drivers in a household makes a big difference in vmt, as does the presence of children in the household. Households with children have more than double the vmt of households without children.

In 2009, 22\% of vehicle trips were traveling to and from work. Another $22 \%$ of trips were for shopping. Shopping is done close to home, as the average trip length for shopping was only 6.5 miles.

Note: The "All" category for average trip length and duration includes records for which trip purpose was not identified.

While car occupancy stayed nearly constant from 1995 to 2009, most other vehicle types showed increased occupancy. Vans and sport utility vehicles have higher vehicle occupancies than cars.

Figure 8.1. Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS

The average vehicle occupancy, calculated as person-miles per vehicle-mile, is highest for social and recreational purposes. The highest vehicle occupancy levels for all purposes were in 1977. The increase in number of vehicles per household and the decrease in average household size could have contributed to the decline since then.

## Sources:

U.S. Department of Transportation, Federal Highway Administration, 1990 Nationwide Personal Transportation Survey: Summary of Travel Trends, FHWA-PL-92027, Washington, DC, March 1992, Figure 6. Data from 2009 NHTS were generated from the Web site nhts.ornl.gov, March 2011. (Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

The 1990 household survey reports the highest average annual miles per vehicle and the 1983 survey reports the lowest. These data show that younger vehicles are typically driven more miles than older vehicles.

Nationwide Personal Transportation Study-1983: D. Klinger and J. Richard Kuzmyak, COMSIS Corporation, Personal Travel in the United States, Volume 1: 1983-84 Nationwide Personal Travel Study, prepared for the U.S. Department of Transportation, Washington, DC, August 1986, Table 4-22, p. 4-21. 1990: Generated from the 1990 Nationwide Personal Transportation Study Public Use Tape, March 1992. 1995, 2001 and 2009: Generated from the 2009 NHTS datasets, version 2, February 2011. (Additional resources: nhts.ornl.gov)

Note: Data include all household vehicles, and have been rounded to the nearest hundred.

Historically, the data from the Nationwide Personal Transportation Survey (NPTS) are based on estimates reported by survey respondents. For the 1995 NPTS and the 2001 National Household Travel Survey (NHTS), odometer data were also collected. The 1995 data indicate that respondents overestimate the number of miles they drive in a year, but the 2001 data do not show that same trend.

Table 8.11
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS

According to the U.S. Census data, the percentage of workers who car pooled has dropped from $19.7 \%$ in 1980 to $10.4 \%$ in 2010. The percent of workers using public transit declined from $6.4 \%$ to $5.3 \%$ in the ten-year period between 1980 and 1990, but stayed relatively the same from 1990 to 2010 ( $\sim 5.0 \%$ ). The average travel time increased by 3.6 minutes from 1980 to 2010. The American Community Survey (ACS) now collects journey-to-work data on an annual basis. It shows the average commute time as 25.3 minutes in 2010.

The average commute time increased to 25.3 minutes in 2010. Two thirds of workers travel less than 30 minutes to work. In 1990, 15.9\% of workers commuted less than 15 minutes; in 2010, 28.1\% enjoyed the short commute.

Table 8.19
Workers by Commute Time, 1990, 2000 and 2010

| Commute time | 1990 | 2000 | 2010 |
| :--- | ---: | ---: | ---: |
| Less than 15 minutes | $15.9 \%$ | $30.1 \%$ | $28.1 \%$ |
| $15-29$ minutes | $51.6 \%$ | $36.3 \%$ | $36.5 \%$ |
| $30-39$ minutes | $14.7 \%$ | $15.7 \%$ | $16.3 \%$ |
| $40-59$ minutes | $9.0 \%$ | $10.7 \%$ | $11.1 \%$ |
| 60 minutes or more | $5.9 \%$ | $7.3 \%$ | $8.0 \%$ |
| Average travel time (minutes) | 22.4 | 25.5 | 25.3 |

Sales of bicycles with wheel sizes of 20 inches and over have grown at an average annual rate of $1.4 \%$ from 1981 to 2010. Bicycle sales experienced a large decline in 2009, which brought total sales to 14.9 million-a new low in the 18-year series, but then sales rose to 19.8 million in 2010.

${ }^{\text {a }}$ Data are not available.

In 2009, $4.5 \%$ of walk trips and $10.9 \%$ of bike trips were tolfrom work. Forty-seven percent of all bike trips were for social/recreational purposes. Nearly $15 \%$ of walk trips were shopping trips.

Figure 8.8. Walk and Bike Trips by Trip Purpose, 2009 NHTS

## Source:

U.S. Department of Transportation, Federal Highway Administration, 2009 National Household Travel Survey Web site: nhts.ornl.gov.

In 2009 only data on daily trips were collected in the NHTS. The 2001 data are still the latest available on longdistance trips.

## Long Distance Trips - 2001 National Household Travel Survey

The 2001 National Household Travel Survey (NHTS) collected data on long-distance trips as well as everyday travel. The everyday travel data is a continuation of the Nationwide Personal Transportation Survey (NPTS), while the long-distance travel data is a continuation of the American Travel Survey (ATS) which was collected in 1977 and 1985. The survey collected trip-related data such as mode of transportation, duration, distance and purpose of trip. It also gathered demographic, geographic, and economic data for analysis purposes.

A long-distance trip is defined as a trip of 50 miles or more, one-way. Long-trip data from the 2001 NHTS were released in the summer of 2004. For additional information about the 2001 NHTS data, contact the Bureau of Transportation Statistics at 202-366-3282 or visit the following Web site: www.bts.gov/programs/national_household_travel_survey.

[^58]In the early seventies, domestic waterborne commerce accounted for over $60 \%$ of total tonnage, but by 1994 foreign tonnage grew to more than half of all waterborne tonnage. Total foreign and domestic tons shipped were about 2.3 billion tons in 2010, down from a peak of 2.59 billion tons in 2006.

${ }^{\text {a }}$ All movements between the United States and foreign countries and between Puerto Rico and the Virgin Islands and foreign countries are classified as foreign trade.
${ }^{\mathrm{b}}$ All movements between U.S. ports, continental and noncontiguous, and on the inland rivers, canals, and connecting channels of the United States, Puerto Rico, and the Virgin Islands, excluding the Panama Canal. Beginning in 1996, fish was excluded for internal and intra port domestic traffic.

The U.S. Army Corps of Engineers Navigation Data Center collects a wealth of waterborne commerce data. Energy use data, however, have never been collected as part of this effort. The energy use data collected by the Energy Information Administration (EIA) on vessel bunkering was formerly displayed on this table. The EIA data include different uses of fuel, not just fuel for domestic waterborne commerce; therefore it was misleading to display those data together.

## Source:

U.S. Environmental Protection Agency, NONROAD2008a model, downloadable file from http://www.epa.gov/otaq/nonrdmdl.htm.

The Interstate Commerce Commission designates Class I railroads on the basis of annual gross revenues. In 2010, seven railroads were given this designation. The number of railroads designated as Class I has changed considerably in the last 30 years; in 1976 there were 52 railroads given Class I designation.

Table 9.7
Class I Railroad Freight Systems in the United States
Ranked by Revenue Ton-Miles, 2010

| Railroad | Revenue ton-miles <br> (billions) | Percent |
| :--- | :---: | :---: |

| Canadian National, Grand Trunk Corporation | 50 | $3.0 \%$ |
| Canadian Pacific Soo Railway | 33 | $2.0 \%$ |
| Kansas City Southern Railway Company | 30 | $1.8 \%$ |
| Total | $\mathbf{1 , 6 9 1}$ | $\mathbf{1 0 0 . 0 \%}$ |

## Source:

Association of American Railroads, Railroad Facts, 2011 Edition, Washington, DC, November 2011, p. 66. (Additional resources: www.aar.org)

Revenue ton-miles for Class I freight railroads was over 1.7 trillion in 2010. Though there are many regional and local freight railroads, the Class I freight railroads accounted for $94 \%$ of the railroad industry's freight revenue in 2010 and $69 \%$ of the industry's mileage operated. The energy intensity of Class I railroads hit an all-time low of 289 btu/ton-mile in 2010.

[^60]According to the 2007 Commodity Flow Survey, $7 \%$ of all freight ton-miles are rail intermodal shipments (truck/rail or rail/water). See Table 5.15 for details. The number of trailers and containers moved by railroads has increased almost seven-fold from 1965 to 2010. Containerization has increased in the last two decades, evidenced by the $316 \%$ increase in the number of containers from 1988 to 2010. The number of trailers moved by rail, however, fell to an all-time low in 2009, but rose in 2010.

[^62]Commuter rail, which is also known as regional rail or suburban rail, is long-haul rail passenger service operating between metropolitan and suburban areas, whether within or across state lines. Commuter rail lines usually have reduced fares for multiple rides and commutation tickets for regular, recurring riders.

Table 9.11

## Source:

American Public Transportation Association, 2012 Public Transportation Fact Book, Washington, DC, April 2012, Tables 5, 6, 8, and 9. (Additional resources: www.apta.com)

This table on transit rail operations includes data on light rail and heavy rail systems. Light rail vehicles are usually single vehicles driven electrically with power drawn from overhead wires. Heavy rail is characterized by high speed and rapid acceleration of rail cars operating on a separate right-of-way.

|  | 2011 | $8.3 \%$ |
|  |  | $7.2 \%$ |

The Transportation Services Index (TSI) was created by the U.S. Department of Transportation Bureau of Transportation Statistics (BTS). It is an index that measures the movement of freight and passengers. The Freight TSI consists of:

- for-hire trucking (parcel services are not included);
- freight railroad services (including rail-based intermodal shipments such as containers on flat cars);inland waterway traffic;
- pipeline movements (including principally petroleum and petroleum products and natural gas); and
- air freight.

The index does not include international or coastal steamship movements, private trucking, courier services, or the United States Postal Services.

The index does not include intercity bus, sightseeing services, taxi service, private car usage, or bicycling and other nonmotorized means of transportation.

Until 2005, gasoline prices in China were, on average, less than the United States. Since then, the United States prices are the lowest of these listed countries. Those in France, Japan, Korea, the United Kingdom, and Germany paid, on average, more than five dollars per gallon in 2010.

Table 10.1
Gasoline Prices ${ }^{\text {a }}$ for Selected Countries, 1990-2011

|  | Current dollars per gallon |  |  |  |  |  |  |

International Energy Agency, Energy Prices and Taxes, Fourth Quarter, 2011, Paris, France, 2012. (Additional resources: www.iea.org)

Note: Comparisons between prices and price trends in different countries require care. They are of limited validity because of fluctuations in exchange rates; differences in product quality, marketing practices, and market structures; and the extent to which the standard categories of sales are representative of total national sales for a given period.

[^64]Of these selected countries, the United Kingdom had the highest diesel fuel price average in 2011, while the United States had the lowest. Similar to the trend with gasoline prices, China's diesel prices were lower than the United States until 2009.

Table 10.2
Diesel Fuel Prices ${ }^{\text {a }}$ for Selected Countries, 1998-2011

## Source:

Note: Comparisons between prices and price trends in different countries require care. They are of limited validity because of fluctuations in exchange rates; differences in product quality, marketing practices, and market structures; and the extent to which the standard categories of sales are representative of total national sales for a given period.

[^65]In 2011 close to sixty percent of the cost of gasoline in France, Germany, and the United Kingdom went for taxes. Of the listed countries, the United States has the lowest percentage of taxes.

Diesel fuel is taxed heavily in the European countries shown here. The U.S. diesel fuel tax share is the lowest of the listed countries.

Note: Data for Canada are not available.

Though the cost of crude oil certainly influences the price of gasoline, it is not the only factor which determines the price at the pump. Processing cost, transportation cost, and taxes also play a major part of the cost of a gallon of gasoline. The average price of a barrel of crude oil (in constant 2011 dollars) increased by $176 \%$ from 2000 to 2011, while the average price of a gallon of gasoline increased $75 \%$ in this same time period.

[^67]The fuel prices shown here are refiner sales prices of transportation fuels to end users, excluding tax. Sales to end users are those made directly to the ultimate consumer, including bulk consumers. Bulk sales to utility, industrial, and commercial accounts previously included in the wholesale category are now counted as sales to end users.

${ }^{\text {a }}$ Adjusted by the Consumer Price Inflation Index.

At the end of 2010, only four states offered tax exemptions to encourage the use of gasohol for transportation purposes. This list is quite short compared to the 30 states which offered gasohol tax exemptions twenty-five years ago.

${ }^{a}$ Includes Clean Fuel Initiatives and Pollution Prevention.

The average price of a new car in $2010(\$ 24,296)$ was very close to the average price in $1916(\$ 21,621)$ when adjusted for inflation. Average new car prices were at their lowest in 1940 (\$12,093). Since 1914 the highest average price was in the year $1998(\$ 27,242)$.

(1995), "Quality-Adjusted Prices for the American Automobile Industry: 1906-1940," National Bureau of Economic Research, Inc.; Gordon, R.J. (1990), The Measurement of Durable Goods Prices, National Bureau of Economic Research, Inc.; and U.S. Department of Commerce, Bureau of Economic Analysis (2012), National Income and Product Accounts.

Note: Estimations were used for years 1941-1946.

In current dollars, import cars, on average, were less expensive than domestic cars until 1982. Since then, import prices have almost tripled, while domestic prices have more than doubled (current dollars).

[^70]The total cost of operating a car is the sum of the fixed cost (depreciation, insurance, finance charge, and license fee) and the variable cost (gas and oil, tires, and maintenance), which is related to the amount of travel. The gas and oil share of total cost was $16.2 \%$ in 2011.

U.S. Department of Energy, Energy Information Administration, International Energy Outlook 2011, Washington, DC, September 2011, Tables A10 and A11. (Additional resources: www.eia.doe.gov)
${ }^{\text {a }}$ OECD is the Organization for Economic Cooperation and Development. See Glossary for included countries.

Global Warming Potentials (GWP) were developed to allow comparison of the ability of each greenhouse gas to trap heat in the atmosphere relative to carbon dioxide. Extensive research has been performed and it has been discovered that the effects of various gases on global warming are too complex to be precisely summarized by a single number. Further understanding of the subject also causes frequent changes to estimates. Despite that, the scientific community has developed approximations, the latest of which are shown below. Most analysts use the 100-year time horizon.

## Table 11.2

## Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide (kilogram of gas per kilogram of carbon dioxide)

| Gas | Lifetime (years) | Global warming potential direct effect for time horizons of |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 20 years | 100 years | 500 years |
| Carbon dioxide ( $\mathrm{CO}_{2}$ ) | $5-200^{\text {a }}$ | 1 | 1 | 1 |
| Methane ( $\mathrm{CH}_{4}$ ) | 12 | 72 | 25 | 8 |
| Nitrous oxide ( $\mathrm{N}_{2} \mathrm{O}$ ) | 114 | 289 | 298 | 153 |
| HFCs ${ }^{\text {b }}$, $\mathrm{PFCs}^{\text {c }}$, and sulfur hexafluoride |  |  |  |  |
| HFC-23 | 270 | 12,000 | 14,800 | 12,200 |
| HFC-125 | 29 | 6,350 | 3,500 | 1,100 |
| HFC-134a | 14 | 3,830 | 1,430 | 435 |

Note: This greenhouse gas emissions inventory includes two "adjustments to energy consumption" which make the data different from Table 11.5. The adjustments are as follows:
(1) Emissions from U.S. Territories are included.
(2) International bunker fuels and military bunker fuels are excluded from the U.S. total.

[^77]Though the transportation sector accounts for the largest share of carbon dioxide emissions, the industrial sector accounts for the largest share of total greenhouse gas emissions.

Table 11.4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 (million metric tonnes carbon dioxide equivalent ${ }^{\text {a }}$ )

|  |  |  |  | Total <br> greenhouse <br> Has |  |

| Commercial | $1,002.9$ | 126.9 | 13.5 | 27.6 | $1,170.9$ |
| Agricultural | 82.6 | 207.2 | 231.1 | 0.1 | 521.0 |
| Industrial | $1,625.9$ | 327.2 | 33.0 | 32.9 | $2,019.0$ |
| Transportation | $1,759.5$ | 1.6 | 19.0 | 58.4 | $1,838.5$ |
| Transportation share of total | $31.1 \%$ | $0.2 \%$ | $6.2 \%$ | $41.0 \%$ | $27.1 \%$ |
| Total greenhouse gas emissions | $5,660.9$ | 666.6 | 305.9 | 142.5 | $6,775.9$ |

## Source:

U.S. Environmental Protection Agency, Inventory of U.S. Greenhouse Gas Emissions and Sinks, 1990-2010. EPA 430-R-12-001, April 2012. (Additional resources:
http://www.epa.gov/climatechange/emissions/usinventoryreport.html)
Note: Totals may not sum due to rounding.

[^78]Gases which contain carbon can be measured in terms of the full molecular weight of the gas or just in terms of their carbon content. This table presents carbon dioxide gas. The ratio of the weight of carbon to carbon dioxide is 0.2727. The transportation sector accounts for approximately one-third of carbon emissions.

[^79]Most U.S. transportation sector carbon dioxide emissions come from petroleum fuels (97.5\%). Motor gasoline has been responsible for about two-thirds of U.S. carbon dioxide emissions over the last twenty years.

## The Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation (GREET) Model

## greet.es.anl.gov

Sponsored by the U.S. Department of Energy's Office of Energy Efficiency and Renewable Energy (EERE), Argonne has developed a full life-cycle model called GREET (Greenhouse gases, Regulated Emissions, and Energy use in Transportation). It allows researchers and analysts to evaluate energy and emission impacts of various vehicle and fuel combinations on a full fuel-cycle/vehicle-cycle basis. The first version of GREET was released in 1996. Since then, Argonne has continued to update and expand the model. The most recent GREET versions are GREET 12012 version for fuel-cycle analysis and GREET 2.7 version for vehicle-cycle analysis.

Figure 11.1. GREET Model

For a given vehicle and fuel system, GREET separately calculates the following:

- Consumption of total energy (energy in non-renewable and renewable sources), fossil fuels (petroleum, natural gas, and coal together), petroleum, coal and natural gas.
- Emissions of $\mathrm{CO}_{2}$-equivalent greenhouse gases - primarily carbon dioxide $\left(\mathrm{CO}_{2}\right)$, methane $\left(\mathrm{CH}_{4}\right)$, and nitrous oxide $\left(\mathrm{N}_{2} \mathrm{O}\right)$.
- Emissions of six criteria pollutants: volatile organic compounds (VOCs), carbon monoxide (CO), nitrogen oxide (NOx), particulate matter with size smaller than 10 micron $\left(\mathrm{PM}_{10}\right)$, particulate matter with size smaller than 2.5 micron $\left(\mathrm{PM}_{2.5}\right)$, and sulfur oxides ( SOx ).

GREET includes more than 100 fuel production pathways and more than 80 vehicle/fuel systems. These vehicle/fuel systems cover all major vehicle technologies in the market and R\&D arena:

- Conventional spark-ignition (SI) engines
- Direct-injection, SI engines
- Direct injection, compression-ignition (CI) engines
- Grid-independent hybrid electric vehicles (both SI and CI)
- Grid-connected (or plug-in) hybrid electric vehicles (both SI and CI)
- Battery-powered electric vehicles
- Fuel-cell vehicles

Figure 11.2. GREET Model Feedstocks and Fuels

To address technology improvements over time, GREET simulates vehicle/fuel systems over the period from 1990 to 2035, in five-year intervals.

For additional information about the GREET model, see the GREET Web site, or contact:
Michael Q. Wang
Argonne National Laboratory
9700 South Cass Avenue, ES/362
Argonne, IL 60439-4815
phone: 630-252-2819
fax: 630-252-3443
email: mqwang@anl.gov

These are results from the GREET model (see preceding pages for description). California's (CA) grid mix was chosen due to the high renewable energy mix in that state. While in contrast, West Virginia's (WV) grid mix is primarily coal. Both of these are compared against the average U.S. grid mix for various vehicle technologies.

Figure 11.3. Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies

Source: Argonne National Laboratory, GREET 12012 Model.
Note: H2 = hydrogen; High-T = high-temperature.

## Carbon Footprint

The carbon footprint measures a vehicle's impact on climate change in tons of carbon dioxide $\left(\mathrm{CO}_{2}\right)$ emitted annually. The following three tables show the carbon footprint for various vehicle classes. The sales-weighted average fuel economy rating for each vehicle class, based on $45 \%$ highway and $55 \%$ city driving, is used to determine the average annual carbon footprint for vehicles in the class. An estimate of 15,000 annual miles is used for each vehicle class and for each year in the series. The equation to calculate carbon footprint uses results of the GREET model version 1.8.

CarbonFootprint $=\left(\mathrm{CO}_{2} \times\right.$ LHV $\left.\times \frac{\text { AnnualMiles }}{\text { CombinedMPG }}\right)+\left(\mathrm{CH}_{4}+\mathrm{N}_{2} \mathrm{O}\right) \times$ AnnualMiles
where:
$\mathrm{CO}_{2}=$ (Tailpipe $\mathrm{CO}_{2}+$ Upstream Greenhouse Gases) in grams per million Btu
LHV = Lower (or net) Heating Value in million Btu per gallon
$\mathrm{CH}_{4}=$ Tailpipe $\underline{\mathrm{CO}}_{2}$ equivalent methane in grams per mile
$\mathrm{N}_{2} \mathrm{O}=$ Tailpipe $\underline{\mathrm{CO}}_{2}$ equivalent nitrous oxide in grams per mile

Note: The Environmental Protection Agency publishes tailpipe emissions in the Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 through 2010, www.epa.gov/otaq/fetrends.htm.

The carbon footprint for all classifications of cars declined between 1975 and 2011. Midsize cars have experienced the greatest reduction in carbon footprint with a decrease of $60 \%$.

Table 11.8

[^82]The amount of carbon dioxide released into the atmosphere by a vehicle is primarily determined by the carbon content of the fuel. However, there is a small portion of the fuel that is not oxidized into carbon dioxide when the fuel is burned. The Environmental Protection Agency (EPA) has published information on carbon dioxide emissions from gasoline and diesel which takes the oxidation factor into account and is based on the carbon content used in EPA's fuel economy analyses. The other fuels listed come from the Energy Information Administration.

Table 11.11
Carbon Dioxide Emissions from a Gallon of Fuel

|  | Grams <br> per gallon | Kilograms <br> per gallon | Pounds <br> per gallon |
| :--- | :---: | :---: | :---: |

${ }^{\text {a }}$ The sums of subcategories may not equal total due to rounding.

Though gasoline-powered light vehicles continue to be responsible for the majority of carbon monoxide emissions from highway vehicles, the total pollution from light vehicles in 2005 is about a third of what it was in 1970. This is despite the fact that there were many more light vehicles on the road in 2005.

Note: Because PM-10 is fine particle matter less than 10 microns, it also includes PM-2.5. Specific data for PM-2.5 are shown on Tables 12.10 and 12.11. Data beyond 2005 are not available.

[^86]The transportation sector accounted for only $4 \%$ of the nation's particulate matter (PM-2.5) emissions in 2011. For details on the highway emissions of PM-2.5, see Table 12.11.

Diesel vehicles are responsible for the majority of highway vehicle PM-2.5 emissions. Nearly two-thirds of the highway vehicles' PM-2.5 emissions are from heavy diesel trucks.

## EMISSION STANDARDS

The U.S. Environmental Protection Agency (EPA) regulates emissions from mobile sources including vehicles, engines, and motorized equipment that produce exhaust and evaporative emissions. Mobile sources contribute to four main air pollutants: carbon monoxide, hydrocarbons, nitrogen oxides, and particulate matter. The EPA not only sets standards for the vehicles, engines, and equipment, but also the fuels that they use. Tables 12.12 through 12.25 contain summaries of the current standards.

## Acronyms Used on Tables $\mathbf{1 2 . 1 2}$ through $\mathbf{1 2 . 2 5}$

| bhp | Brake horsepower-hour |
| :--- | :--- |
| CI | Compression-ignition |
| CO | Carbon Monoxide |
| DE | Diesel engine |
| g | Gram |
| g/kN | Grams per kilonewton |
| g/mi | Grams per mile |
| GVW | Gross vehicle weight |
| HC | Hydrocarbons |
| HCHO | Formaldehyde |
| HLDT | Heavy light-duty truck |
| Hp-hr | Horsepower-hour |
| kW | Kilowatt |
| kW-hr | Kilowatt-hour |
| LDT | Light-duty truck |
| LDV | Light-duty vehicle |
| LEV | Low-emission vehicle |
| LLDT | Light light-duty truck |
| LVW | Loaded vehicle weight |
| MDPV | Medium-duty passenger vehicle |
|  | (8,500-10,000 lbs. GVWR) |
| NMHC | Non-methane hydrocarbon |
| NMOG | Non-methane organic gases |
| NOx | Nitrogen oxides |
| PM | Particulate matter |
| ppm | Parts per million |
| rPR | Rated pressure ratio |
| SI | Spark-ignition |
| SULEV | Super-ultra-low-emission vehicle |
| ULEV | Ultra-low-emission vehicle |
| ZEV | Zero-emission vehicle |
|  |  |

40 CFR 86.099-11 Emission standards for 1999 and later model year diesel heavy-duty engines and vehicles.
40 CFR 86.004-11 Emission standards for 2004 and later model year diesel heavy-duty engines and vehicles.
40 CFR 86.007-11 Emission standards and supplemental requirements for 2007 and later model year diesel heavyduty engines and vehicles. (Additional resources: www.epa.gov/otaq/standards)

Note: The test procedures are the EPA Transient Test Procedure and the EPA Smoke Test Procedure. Definitions of acronyms are on page 12-13.
${ }^{\text {a }}$ Percentages apply to smoke opacity at acceleration/lug/peak modes.
${ }^{\text {b }}$ Standards for 1990 apply only to diesel-fueled heavy-duty engines (HDE). Standards for 1991+ apply to both diesel- and methanol-fueled HDEs. Standards that apply to urban buses specifically are footnoted.
${ }^{c}$ This standard applies to the following fueled engines for the following model years: methanol - 1990+, natural gas and liquefied petroleum gas (LPG) - 1994+.
${ }^{d}$ For petroleum-fueled engines, the standard is for hydrocarbons (HC). For methanol-fueled engines, the standard is for total hydrocarbon equivalent (THCE).
${ }^{\mathrm{e}}$ Certification standard for urban buses for 1993.
${ }^{\mathrm{f}}$ Certification standard for urban buses from 1994-95.
${ }^{g}$ Certification standard for urban buses from 1996 and later. The in-use standard is 0.07 .
${ }^{h}$ Load Response Test certification data submittal requirements take effect for heavy-duty diesel engines beginning in model year 2004. The following requirements take effect with the 2007 model year: steady-state test requirement and Not-to-Exceed (NTE) test procedures for testing of in-use engines. On-board diagnostic requirements applicable to heavy-duty diesel vehicles and engines up to 14,000 pounds gross vehicle weight rating (GVWR) phase in from the 2005 through 2007 model years.

# Table 12.14 (continued) Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards 

#### Abstract

${ }^{i}$ The modified averaging, banking, and trading program for 1998 and later model year engines applies only to diesel cycle engines. Credits generated under the modified program may be used only in 2004 and later model years. ${ }^{j}$ For heavy-duty diesel engines, there are three options to the measurement procedures currently in place for alternative fueled engines: (1) use a THC measurement in place of an non-methane hydrocarbon (NMHC) measurement; (2) use a measurement procedure specified by the manufacturer with prior approval of the Administrator; or (3) subtract two percent from the measured THC value to obtain an NMHC value. The methodology must be specified at time of certification and will remain the same for the engine family throughout the engines' useful life. For natural gas vehicles, EPA allows the option of measuring NMHC through direct quantification of individual species by gas chromatography. ${ }^{\mathrm{k}}$ Starting in 2006, refiners must begin producing highway diesel fuel that meets a maximum sulfur standard of 15 parts per million ( ppm ). ${ }^{1}$ Subject to a Supplemental Emission Test (1.0 x Federal Test Procedure [FTP] standard (or Family Emission Limit [FEL]) for nitrogen oxides [NOx], NMHC, and particulate matter [PM]) and a NTE test ( $1.5 \times$ FTP standard [or FEL] for NOx, NMHC, and PM). ${ }^{m}$ EPA adopted the lab-testing and field-testing specifications in 40 CFR Part 1065 for heavy-duty highway engines, including both diesel and Otto-cycle engines. These procedures replace those previously published in 40 Code of Federal Regulations (CFR) Part 86, Subpart N. Any new testing for 2010 and later model years must be done using the 40 CFR Part 1065 procedures. ${ }^{n}$ Two-phase in-use NTE testing program for heavy-duty diesel vehicles. The program begins with the 2007 model year for gaseous pollutants and 2008 for PM. The requirements apply to diesel engines certified for use in heavy-duty vehicles (including buses) with GVWRs greater than 8,500 pounds. However, the requirements do not apply to any heavy-duty diesel vehicle that was certified using a chassis dynamometer, including medium-duty passenger vehicles with GVWRs of between 8,500 and 10,000 pounds. ${ }^{\circ}$ NOx and NMHC standards will be phased in together between 2007 and 2010. The phase-in will be on a percent-of-sales basis: 50 percent from 2007 to 2009 and 100 percent in 2010. ${ }^{\mathrm{p}}$ Note that for an individual engine, if the useful life hours interval is reached before the engine reaches 10 years or 100,000 miles, the useful life shall become 10 years or 100,000 miles, whichever occurs first, as required under Clean Air Act section 202(d).

## Source:

40 CFR Part 87, Aircraft emission standards, test procedures, certification requirements (Additional resources: www.epa.gov/otaq/standards)

Note: The test procedures are the International Civil Aviation Organization (ICAO) Smoke Emission Test Procedure and the ICAO Gaseous Emissions Test Procedure. There is no useful life or warranty period for purposes of compliance with aircraft emissions standards. Definitions of acronyms are on page 12-13.
${ }^{\text {a }}$ T8=all aircraft gas turbine engines of the JT8D model family
TF=all turbofan and turbojet aircraft engines except engines of Class T3, T8, and TSS
T3=all aircraft gas turbine engines of the JT3D model family
TSS=all aircraft gas turbine engines for aircraft operations at supersonic flight speeds
$\mathrm{TP}=$ all aircraft turboprop engines
${ }^{\mathrm{b}}$ Federal standards apply to planes operating in the United States, regardless of where they were manufactured.
${ }^{\text {c }}$ Rated output ( rO ) is the maximum power/thrust available for takeoff.
${ }^{\mathrm{d}} \mathrm{T} 3$ engines are no longer manufactured but are in the existing fleet.

These standards apply to construction and agricultural equipment, such as excavators, paving equipment, tractors, combines, bulldozers, and skidders.

## Sources:

40 CFR $1048.101=$ Exhaust emission standards
40 CFR $1048.105=$ Evaporative emission standards
40 CFR $1048.110=$ Engine diagnostic requirements (Additional resources: www.epa.gov/otaq/standards)
${ }^{\text {a }}$ The numerical emission standards for hydrocarbons (HC) must be met based on the following types of hydrocarbon emissions for engines powered by the following fuels: (1) non-methane hydrocarbons (NMHC) for natural gas; (2) total hydrocarbon equivalent (THCE) for alcohol; and (3) total hydrocarbons (THC) for other fuels.
${ }^{\text {b }}$ Voluntary Blue Sky standards for large spark-ignition (SI) engines are available. Engines with displacement at or below 1,000 cubic centimeters ( cc ) and maximum power at or below 30 kilowatts ( kW ) may be certified under the program for small SI engines.
${ }^{\text {c }}$ Emission standards are based on testing over a steady-state duty-cycle.
${ }^{\mathrm{d}}$ The Tier 1 HC plus nitrogen oxides (NOx) emission standard for in-use testing is 5.4 grams per kW-hour ( $\mathrm{g} / \mathrm{kW}-\mathrm{hr}$ ).
${ }^{e}$ Useful life is expressed in years and hours, whichever comes first. These are the minimum useful life requirements. For severe-duty engines, the minimum useful life is seven years or 1,500 hours of operation, whichever comes first. A longer useful life in hours is required if: (a) the engine is designed to operate longer than the minimum useful life based on the recommended rebuild interval; or (b) the basic mechanical warranty is longer than the minimum useful life.
${ }^{f}$ Optional engine certification is allowed according to the following formula: $(\mathrm{HC}+\mathrm{NOx}) \times \mathrm{CO}^{0.784} \leq 8.57$. The HC+NOx and carbon monoxide (CO) emission levels selected to satisfy this formula, rounded to the nearest 0.1 $\mathrm{g} / \mathrm{kW}$-hr, become the emission standards that apply for those engines. One may not select an HC+NOx emission standard higher than $2.7 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$ or a CO emission standard higher than $20.6 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.

40 CFR 1033.101 = Emission Standards and Useful Life

[^94]
## Table 12.21 (continued)

 Locomotives - Exhaust Emission Standards${ }^{\mathrm{j}}$ Manufacturers may elect to meet a combined $\mathrm{NOx}+\mathrm{HC}$ standard of $1.4 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$ instead of the otherwise applicable Tier 4 NOx and HC standards.
${ }^{\mathrm{k}}$ The line-haul particulate matter (PM) standard for newly remanufactured Tier 2 locomotives is $0.20 \mathrm{~g} / \mathrm{bhp}-$ hr until January 1, 2013, except as specified in 40 CFR Part 1033.150(a).
${ }^{1}$ The switch PM standard for new Tier 2 locomotives is $0.24 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$ until January 1, 2013, except as specified in 40 CFR Part 1033.150(a).
${ }^{\mathrm{m}}$ The smoke opacity standards apply only for locomotives certified to one or more PM standards or Family Emission Limits (FEL) greater than $0.05 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$. Percentages apply to smoke opacity at steady state $/ 30$-second peak/3-second peak, as measured continuously during testing.
${ }^{n}$ Useful life and warranty period are expressed in megawatt-hours (mw-hr), years, or miles, whichever comes first. Manufacturers are required to certify to longer useful lives if their locomotives are designed to last longer between overhauls than the minimum useful life value.
${ }^{\circ}$ For locomotives originally manufactured before January 1, 2000, and not equipped with mw-hr meters.

These standards apply to auxiliary and propulsion engines used by all types of recreational and commercial vessels, from small fishing boats to ocean-going ships.

## Sources:

40 CFR 1051.101-115 = Emission standards (Additional resources: www.epa.gov/otaq/standards)
${ }^{\text {a }}$ The numerical emission standards for hydrocarbons (HC) must be met based on the following types of hydrocarbon emissions for recreational engines and vehicles powered by the following fuels: (1) non-methane hydrocarbons for natural gas; (2) total hydrocarbon equivalent for alcohol; and (3) total hydrocarbons for other fuels.
${ }^{\mathrm{b}}$ Useful life is expressed in hours, years, or kilometers, whichever comes first; warranty period is expressed in hours, months, or kilometers (km), whichever comes first. Nonroad recreational engines and vehicles must meet emission standards over their full useful life. A longer useful life in terms of km and hours must be specified for the engine family if the average service life is longer than the minimum value as described in 40 Code of Federal Regulations (CFR) 1051 Subpart B.
${ }^{\text {c }}$ Test procedures for snowmobiles use the equipment and procedures for spark-ignition engines in 40 CFR Part 1065.
${ }^{d}$ Phase 1 standards will be phased in: 50 percent by 2006, 100 percent by 2007.
${ }^{\mathrm{e}}$ Litigation on the November 2002 final rule resulted in a court decision that requires EPA to clarify the evidence and analysis upon which the Phase 3 carbon monoxide (CO) and HC standards were based. EPA will address this in a future rulemaking.
${ }^{\mathrm{f}}$ These are the maximum allowable family emission limits (FEL). The HC and CO standards are defined by a functional relationship as described in 40 CFR 1051.103(a)(2).
${ }^{\mathrm{g}}$ For off-highway motorcycles and ATVs, chassis dynamometer emissions test procedures are specified in 40 CFR Part 86, Subpart F and engine dynamometer emissions test procedures are specified in 40 CFR Part 1065.
${ }^{\mathrm{h}}$ Maximum allowable FEL: 20.0 grams per kilometer ( $\mathrm{g} / \mathrm{km}$ ) for HC plus nitrogen oxides (NOx) and $50 \mathrm{~g} / \mathrm{km}$ for CO .

## Table 12.24 (continued)

 Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards[^98]These standards were established in conjunction with the Tier 2 light vehicle standards to maintain the performance of catalytic converters.

## APPENDIX A

## SOURCES \& METHODOLOGIES

## SOURCES \& METHODOLOGIES

This appendix contains documentation of the estimation procedures used by ORNL. The reader can examine the methodology behind the estimates and form an opinion as to their utility. The appendix is arranged by subject heading. Only tables which contain ORNL estimations are documented in Appendix A; all other tables have sources listed at the bottom of the table. Since abbreviations are used throughout the appendix, a list of abbreviations is also included.

## Contents of Appendix A

List of Abbreviations Used in Appendix A ..... A-4
Energy Use Sources ..... A-5
Highway energy use ..... A-5
Off-highway energy use ..... A-14
Nonhighway energy use ..... A-14
Passenger Travel and Energy Use ..... A-24
Highway Passenger Mode Energy Intensities ..... A-28
Nonhighway Mode Energy Intensities. ..... A-31
Freight Mode Energy Intensities ..... A-32

## Energy Use Sources

## Highway energy use

## Cars

Fuel use in gallons (1970-2007) - DOT, FHWA, Highway Statistics 2008, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995.
Fuel use in gallons (2008-2010) - Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.
Fuel type distribution - Fuel use was distributed among fuel types using the percentages shown in Table A.1. The FHWA discontinued gasohol data in 2005. Therefore, data from EIA, Alternatives to Traditional Transportation Fuels, 2006-2010, Table C1 were used.

Table A. 1
Car Fuel Use and Fuel Type Shares for Calculation of Energy Use

| Year | Fuel use (million gallons) | Source for Gasohol shares | Source forgasoline/diesel shares | Shares by fuel type |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Gasoline | Gasohol | Diesel |
| 1970 | 67,820 |  | 1984 NVPP | 99.8\% | 0.0\% | 0.2\% |
| 1971 | 71,346 |  | interpolated | 99.2\% | 0.0\% | 0.8\% |
| 1972 | 75,937 |  | interpolated | 98.7\% | 0.0\% | 1.3\% |

[^101]
## Motorcycles

DOT, FHWA, Highway Statistics 2010, Table VM-1, and annual editions. The FHWA made methodology changes for Highway Statistics 2009-10. At that time, they published historical data back to 2007 which do not match the previous data.

## Table A. 2 Motorcycle Fuel Use

| Year | Fuel use (thousand gallons) | Year | Fuel use (thousand gallons) |
| :---: | :---: | :---: | :---: |
| 1970 | 59,580 | 1991 | 183,560 |
| 1971 | 72,140 | 1992 | 191,140 |
| 1972 | 86,620 | 1993 | 198,120 |
| 1973 | 103,880 | 1994 | 204,800 |
| 1974 | 108,900 | 1995 | 198,262 |
| 1975 | 112,580 | 1996 | 195,940 |
| 1976 | 120,060 | 1997 | 201,620 |
| 1977 | 126,980 | 1998 | 205,660 |
| 1978 | 143,160 | 1999 | 211,680 |
| 1979 | 172,740 | 2000 | 209,380 |
| 1980 | 204,280 | 2001 | 192,780 |
| 1981 | 213,800 | 2002 | 191,040 |
| 1982 | 198,200 | 2003 | 190,780 |
| 1983 | 175,200 | 2004 | 202,447 |
| 1984 | 175,680 | 2005 | 189,495 |
| 1985 | 181,720 | 2006 | 221,030 |
| 1986 | 187,940 | 2007 | 474,923 |
| 1987 | 190,120 | 2008 | 489,417 |
| 1988 | 200,480 | 2009 | 482,290 |
| 1989 | 207,420 | 2010 | 425,551 |
| 1990 | 191,140 |  |  |
| Heat content used for conversion to btu: |  |  | 125,000 btu/gallon |

${ }^{\text {a }}$ Data are not continuous between 2006 and 2007 due to changes in estimation methodology. See source document for details.

## Buses

Transit:
APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Includes motorbus and trolley bus data.

Table A. 3
Transit Bus Fuel Use

| Year | $\underset{\substack{\text { Lmillion } \\ \text { ( } \\ \text { gallons) }}}{ }$ | $\underset{\substack{\text { (million } \\ \text { gallons) }}}{\underset{2}{2}}$ | CNG (million gallons) | Gasoline (million gallons) | Diesel fuel (million gallons) | Electricity (thousand kilowatt hours) | Biodiesel (million gallons) | Methanol (million gallons) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1994 | 1.1 | 0.2 | 3.1 | 2.1 | 565.1 | 102.9 |  | 12.5 |
| 1995 | 1.7 | 0.3 | 10.0 | 2.3 | 563.8 | 100.0 |  | 12.0 |
| 1996 | 2.3 | 0.6 | 11.5 | 1.8 | 577.7 | 69.0 |  | 11.6 |
| 1997 | 3.3 | 1.0 | 20.0 | 2.7 | 597.6 | 78.0 |  | 8.7 |
| 1998 | 3.1 | 0.9 | 32.6 | 2.0 | 606.6 | 74.0 |  | 5.0 |
| 1999 | 5.3 | 0.8 | 39.9 | 1.4 | 618.0 | 75.0 |  | 2.7 |
| 2000 | 10.5 | 0.7 | 50.4 | 1.3 | 635.2 | 77.0 |  | 0.8 |
| 2001 | 11.7 | 1.2 | 60.9 | 1.5 | 587.2 | 74.0 |  | 0.8 |
| 2002 | 16.8 | 1.8 | 77.8 | 1.3 | 559.0 | 73.0 |  | 1.8 |
| 2003 | 14.2 | 1.8 | 94.9 | 1.1 | 536.0 | 69.0 |  | 1.9 |
| 2004 | 16.5 | 1.7 | 106.7 | 1.8 | 550.5 | 68.0 |  | 4.7 |
| 2005 | 18.3 | 2.0 | 117.2 | 1.0 | 533.8 | 67.0 |  | 8.1 |

| 2007 | 18.3 | a | 129.1 | 2.5 | 494.1 | 61.0 | 25.8 | 1.3 |
| 2008 | 17.9 | a | 135.5 | 3.8 | 493.3 | 62.2 | 41.8 | 0.9 |
| 2009 | 25.5 | a | 141.6 | 6.7 | 455.5 | 69.5 | 40.6 | 0.0 |
| 2010 | 23.0 | a | 126.2 | 8.1 | 435.4 | 66.0 | 43.5 | 0.0 |
| Heat content used for conversion to btu: | $\begin{array}{r} 84,800 \\ \text { btu/gallon } \\ \hline \end{array}$ | $\begin{array}{r} 91,300 \\ \text { btu/gallon } \end{array}$ | $\begin{array}{r} 138,700 \\ \text { btu/gallon } \end{array}$ | $\begin{array}{r} 125,000 \\ \text { btu/gallon } \end{array}$ | $\begin{array}{r} 138,700 \\ \text { btu/gallon } \end{array}$ | $\begin{array}{r} 64,600 \\ \text { btu/gallon } \end{array}$ |  | $\begin{array}{r} 10,339 \\ \text { but/kWhr } \\ \hline \end{array}$ |

Note: CNG is reported in diesel-gallon equivalents.

[^102]
## Intercity and School:

Eno Transportation Foundation, Transportation in America, 2001, Nineteenth Edition, 2003, Washington, DC, pp. 20-23. School bus fuel was assumed to be $90 \%$ diesel fuel and $10 \%$ gasoline based on estimates from the National Association of State Directors of Pupil Transportation Services. Intercity bus fuel was assumed to be $100 \%$ diesel.

Table A. 4
Intercity and School Bus Fuel Use

| Year | Intercity <br> (million gallons) | School <br> (million gallons) |
| :---: | :---: | :---: |
| 1970 | 305.34 | 299.88 |

| 2010 | 215.25* | 532.89* |
| Fuel type shares | 100\% diesel | 90\% diesel <br> 10\% gasoline |
| Heat content used for conversion to btu: | $\begin{gathered} \text { 138,700 } \\ \text { btu/gallon } \end{gathered}$ | 138,700 btu/gallon $125,000 \mathrm{btu} / \mathrm{gallon}$ |

*Estimated using the rate of change of bus vehicle-miles traveled from FHWA Highway Statistics, Table VM-1 (recently revised).

## Trucks

## Light Trucks:

Fuel use in gallons (1970-2007) - DOT, FHWA, Highway Statistics 2008, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995.

Fuel use in gallons ( $\mathbf{2 0 0 8} \mathbf{- 2 0 1 0}$ ) - Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.
Fuel type distribution - Fuel use was distributed among fuel types using the percentages shown in Table A.1. The FHWA discontinued gasohol data in 2005. Therefore, data from EIA, Alternatives to Traditional Transportation Fuels, 2006-2010, Table C1 were used.

Table A. 5
Light Truck Fuel Use and Fuel Type Shares for Calculation of Energy Use

| Year | Fuel use (million gallons) | Source for gasohol shares | Source for gasoline/diesel /lpg shares | Shares by fuel type |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^103]
## Medium/Heavy Trucks:

DOT, FHWA, Highway Statistics 2010, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995. The FHWA made methodology changes for Highway Statistics 2009. At that time, they published historical data back to 2007 which do not match the previous data. Total gallons for medium/heavy trucks are the sum of single-unit trucks and combination trucks.

Table A. 6
Medium/Heavy Truck Fuel Use and Fuel Type Shares for Calculation of Energy Use

| Year | Fuel use (million gallons) | Source for fuel type shares | Shares by fuel type |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Gasoline | Diesel | Lpg |
| 1970 | 11,316 | 1977 TIUS | 10.4\% | 89.5\% | 0.1\% |
| 1971 | 11,812 | 1977 TIUS | 10.4\% | 89.5\% | 0.1\% |

|  |  |  | btu/gallon | btu/gallon | btu/gallon |

[^104]Shares of Class 3-6 and 7-8 energy use by fuel type were calculated from the 2002 Vehicle Inventory and Use Survey (VIUS) and applied to all years 1970-2010.

Table A. 7
Share of Medium and Heavy Truck Energy Use

|  | Share of energy use |  |  |
| :--- | :---: | :---: | :---: |
| Fuel type | Class 3-6 | Class 7-8 | Total |
| Gasoline | $92 \%$ | $8 \%$ | $100 \%$ |
| Diesel | $14 \%$ | $86 \%$ | $100 \%$ |
| LPG | $99 \%$ | $1 \%$ | $100 \%$ |

## Off-highway energy use

U.S. Environmental Protection Agency, NONROAD2008a model, results generated May 2012. Gallons of fuel by fuel type were produced for agricultural equipment, airport equipment, construction and mining equipment, industrial equipment, lawn and garden equipment, logging equipment, railroad maintenance equipment, and recreational equipment. Some non-transportation-related equipment, such as generators, chain saws, compressors, and pumps, were excluded from the data.

## Nonhighway energy use

## Air <br> General Aviation:

DOT, FAA, General Aviation Activity and Avionics Survey: Annual Summary Report Calendar Year 2010, Table 5.1, and annual.

Table A. 8
General Aviation Fuel Use

| Year | Jet fuel (million gallons) | Aviation gasoline (million gallons) |
| :---: | :---: | :---: |
| 1970 | 208.0 | 551.0 |

## Domestic and International Air Carrier:

DOT, Bureau of Transportation Statistics, "Fuel Cost and Consumption Tables,"
www.transtats.bts.gov/fuel.asp. The table below shows all international fuel use. Because the data for international include fuel purchased abroad, for the tables in Chapter 2, the international total was divided in half to estimate domestic fuel use for international flights.

## Table A. 9 Air Carrier Fuel Use

| Year | Domestic (thousand gallons) | International (thousand gallons) | Total (thousand gallons) |
| :---: | :---: | :---: | :---: |
| 1970 |  |  | 10,085,000 |
| 1971 |  |  | 10,140,000 |

## Pipeline

The sum of natural gas, crude petroleum and petroleum product, and coal slurry and water.

## Natural Gas:

The amount of natural gas used to transport natural gas was defined as "pipeline fuel" as reported in DOE, EIA, Natural Gas Annual 2011, Table 1. Cubic feet were converted to Btu using $1,031 \mathrm{Btu} / \mathrm{ft} 3$. Electricity use was estimated using the following procedure as reported on p. 5-110 of J. N. Hooker et al., End Use Energy Consumption DataBase: Transportation Sector. The energy consumption of a natural gas pipeline was taken to be the energy content of the fuel used to drive the pumps. Some $94 \%$ of the installed pumping horsepower was supplied by natural gas. The remaining $6 \%$ of the horsepower was generated more efficiently, mostly by electric motors. The energy consumed by natural gas pipeline pumps that were electrically powered was not known. In order to estimate the electricity consumed, the Btu of natural gas pipeline fuel consumed was multiplied by a factor of 0.015 . From this computed value, electricity efficiency and generation loss must be taken into account. The electricity energy use in Btu must be converted to kWhr , using the conversion factor $29.305 \times 10-5 \mathrm{kWhr} / \mathrm{Btu}$. Electricity generation and distribution efficiency was $29 \%$. When generation and distribution efficiency are taken into account, 1 kWhr equals $10,339 \mathrm{Btu}$.

## Crude petroleum and petroleum product:

J. N. Hooker, Oil Pipeline Energy Consumption and Efficiency, ORNL-5697, ORNL, Oak Ridge, TN, 1981. (Data held constant; Latest available data.)

## Coal slurry and water:

W. F. Banks, Systems, Science and Software, Energy Consumption in the Pipeline Industry, LaJolla, CA, October 1977. (Data held constant; Latest available data.)

Table A. 12
Pipeline Fuel Use

| Year | Natural gas (million cubic feet) | Estimated natural gas pipeline electricity use (million kWhr) | Electricity constant (btu) |
| :---: | :---: | :---: | :---: |
| 1970 | 722,166 | 3,272.9 | 212.1 |

## Calculation of Million Barrels per Day Crude Oil Equivalent

One gallon of gasoline, diesel fuel, or lpg is estimated to be the equivalent of one gallon of crude oil. Petroleum used for electricity was calculated using the following formula:
(\{[(BTU*S)/G ]/P \}/365)/1000
BTU $=$ Btus of electricity from Table 2.5
$\mathrm{S} \quad=\quad$ Share of petroleum used in making primary electricity (Calculated from Table 2.6 from the EIA, Monthly Energy Review)
$\mathrm{G}=$ Electricity generation and distribution (assumed 29\%)
$\mathrm{P}=$ Btus per barrel of petroleum product (Table A3 from the EIA, Monthly Energy Review).

## Passenger Travel and Energy Use

## Cars

Number of vehicles, vehicle-miles - Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.
Passenger-miles - Vehicle-miles multiplied by an average load factor.
Load factor - 2009 NHTS shows car load factor as 1.55 persons per vehicle.
Energy intensities -
Btu per vehicle-mile - Car energy use divided by vehicle-miles.
Btu per passenger-mile - Car energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

## Light Trucks

Number of vehicles, vehicle-miles - Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming. Data by truck type were multiplied by the shares of trucks/truck travel which are for personal use (Table A.17).
Passenger-miles - Vehicle-miles multiplied by an average load factor.
Load factor - 2009 NHTS shows personal light truck load factor as 1.84 persons per vehicle.
Energy intensities -
Btu per vehicle-mile - Personal light truck energy use divided by personal light truck vehicle-miles.
Btu per passenger-mile - Personal light truck energy use divided by personal light truck passengermiles.
Energy use - See Energy Use Sources, p. A-10, A-12 (light trucks, medium/heavy trucks). Data by truck type were multiplied by the shares of truck fuel use which are for personal use (Table A.17) which were derived by ORNL from the 2002 VIUS Micro Data File on CD.

Table A. 17
Share of Trucks, Truck Travel, and Fuel Use for Personal Travel

| Personal trucks |  |
| :---: | :--- |
| $85.6 \%$ | 2-axle, 4-tire trucks |
| $26.9 \%$ | Other single-unit and combination trucks |
| Personal truck travel |  |
| $80.9 \%$ | 2-axle, 4-tire trucks |
| $13.1 \%$ | Other single-unit and combination trucks |
| Personal truck fuel use |  |
| $78.0 \%$ | 2-axle, 4-tire trucks |
| $6.0 \%$ | Other single-unit and combination trucks |

Note: Since these shares come from the 2002 VIUS, they may underestimate the amount of personal trucks, truck travel, and energy use for 2010.

## Motorcycles

Number of vehicles, vehicle-miles - DOT, FHWA, Highway Statistics 2010, Table VM-1.
Passenger-miles - Vehicle-miles multiplied by an average load factor.
Load factor - 2009 NHTS shows motorcycle load factor as 1.16 persons per vehicle.
Energy intensities -
Btu per vehicle-mile - Motorcycle energy use divided by vehicle-miles.
Btu per passenger-mile - Motorcycle energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-7. Data series shown in Table 2.7.

## Demand Response

Number of vehicles, vehicle-miles, passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012.
Load factor - Passenger-miles divided by vehicle-miles.
Energy intensities -
Btu per vehicle-mile - Energy use divided by vehicle-miles.
Btu per passenger-mile - Energy use divided by passenger-miles.
Energy use - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012.

## Buses

## Transit

Number of vehicles, vehicle-miles, passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 5.16.
Load factor - Passenger-miles divided by vehicle-miles.
Energy intensities -
Btu per vehicle-mile - Transit bus energy use divided by transit bus vehicle-miles.
Btu per passenger-mile - Transit bus energy use divided by transit bus passenger-miles.
Energy use - See Energy Use Sources, p. A-8. Data series shown in Table 5.16.

## Intercity

Energy use - See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, Highway Statistics 2010, was used to estimate the change in energy use.

## School

Number of vehicles - DOT, FHWA, Highway Statistics 2010, Table MV-10.
Energy use - See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, Highway Statistics 2010, was used to estimate the change in energy use.

## Air

## Certificated air carriers

Aircraft-miles, passenger-miles - DOT, BTS, U.S. Air Traffic Statistics Through February 2012, http://www.bts.gov/xml/air traffic/src/index.xml\#customizeTable, Washington, DC.
Load factor - Passenger-miles divided by aircraft-miles.
Energy intensities Btu per passenger-mile - Certificated air carrier energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-15. All of domestic fuel use and half of international fuel use was considered to be domestic use.
Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

## General aviation

Number of vehicles - DOT, FAA, General Aviation and Part 135 Activity Surveys - CY 2010, Data series shown in Table 9.3.
Energy intensities -
Btu per passenger-mile - General aviation energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-14. Data series shown in Table 9.3.

## Recreational boating

Number of vehicles and energy use - U.S. EPA, NONROAD2008a model.

## Rail

## Intercity

Number of vehicles, vehicle-miles, passenger-miles - AAR, Railroad Facts, 2011 Edition, Washington, DC, 2011.
Load factor - Passenger-miles divided by vehicle-miles.
Energy Intensities -
Btu per vehicle-mile - Intercity rail energy use divided by vehicle-miles.
Btu per passenger-mile - Intercity rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-23. Data series shown in Table 9.10.

## Transit

Number of vehicles, vehicle-miles, passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Sum of light and heavy rail transit. Data series shown on Table 9.12.
Load factor - Passenger-miles divided by vehicle-miles.

## Energy intensities -

Btu per vehicle-mile - Light and heavy transit rail energy use divided by vehicle-miles.
Btu per passenger-mile - Light and heavy transit rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-22. Data series shown in Table 9.12.

## Commuter

Number of vehicles, vehicle-miles, passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 9.11.
Load factor - Passenger-miles divided by vehicle-miles.
Energy intensities -
Btu per vehicle-mile - Commuter rail energy use divided by vehicle-miles.
Btu per passenger-mile - Commuter rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-21. Data series shown in Table 9.11.

## Highway Passenger Mode Energy Intensities

## Cars

Btu per vehicle-mile - Car energy use divided by car vehicle miles of travel.
Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 2.7.
Vehicle-miles - 1970-2007: DOT, FHWA, Highway Statistics 2007, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995. Data series shown in Table 4.1.
2008-2010: Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.
Btu per passenger-mile - Car energy use divided by car passenger-miles.
Energy use - See Energy Use Sources, p. A-5. Data series shown in Table 2.7.
Passenger miles - Vehicle miles multiplied by an average load factor.
Vehicle-miles - DOT, FHWA, Highway Statistics 2009, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995. Data series shown in Table 4.1.
Load factor - NPTS 1969, 1977, 1983/84, 1990, and 1995; NHTS 2001 and 2009. Data series shown in Table A. 18.

Table A. 18
Car Load Factor used to Calculate Passenger-Miles

| Year | Source | Load Factor |
| :---: | :---: | :---: |
| 1970 | 1969 NPTS | 1.90 |
| 1971 | Interpolated | 1.90 |
| 1972 | Interpolated | 1.90 |
| 1973 | Interpolated | 1.90 |
| 1974 | Interpolated | 1.90 |
| 1975 | Interpolated | 1.90 |
| 1976 | Interpolated | 1.90 |
| 1977 | 1977 NPTS | 1.90 |
| 1978 | Interpolated | 1.88 |
| 1979 | Interpolated | 1.87 |
| 1980 | Interpolated | 1.85 |
| 1981 | Interpolated | 1.83 |
| 1982 | Interpolated | 1.82 |
| 1983 | 1983/84 NPTS | 1.80 |
| 1984 | Interpolated | 1.77 |
| 1985 | Interpolated | 1.74 |
| 1986 | Interpolated | 1.71 |
| 1987 | Interpolated | 1.69 |
| 1988 | Interpolated | 1.66 |
| 1989 | Interpolated | 1.63 |

| 1998 | Interpolated | 1.59 |
| 1999 | Interpolated | 1.58 |
| 2000 | Interpolated | 1.58 |
| 2001 | 2001 NHTS | 1.57 |
| 2002 | 2001 NHTS | 1.57 |
| 2003 | 2001 NHTS | 1.57 |
| 2004 | 2001 NHTS | 1.57 |
| 2005 | 2001 NHTS | 1.57 |
| 2006 | 2001 NHTS | 1.57 |
| 2007 | 2001 NHTS | 1.57 |
| 2008 | 2009 NHTS | 1.55 |
| 2009 | 2009 NHTS | 1.55 |
| 2010 | 2009 NHTS | 1.55 |

## Light trucks

Btu per vehicle-mile - Light truck energy use divided by light truck vehicle miles of travel.
Energy use - See Energy Use Sources, p. A-10. Data series shown in Table 2.7.
Vehicle-miles - 1970-2007: DOT, FHWA, Highway Statistics 2009, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995. Data series shown in Table 4.2.

2008-2010: Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA Highway Statistics 2010, EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2011, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.

## Buses

Transit
Btu per vehicle-mile - Transit bus energy use divided by transit bus vehicle-miles.
Energy use - See Energy Use Sources, p. A-8. Data series shown in Table 5.16.
Vehicle-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 5.16.

Btu per passenger-mile - Transit bus energy use divided by transit bus passenger-miles.
Energy use - See Energy Use Sources, p. A-8. Data series shown in Table 5.16.
Passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 5.16.

## Intercity

Btu per passenger-mile - Data are not available.
Energy use - See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, Highway Statistics 2010, was used to estimate the change in energy use.
Passenger-miles - Data are not available.

## Nonhighway Mode Energy Intensities

## Air

## Certificated air carriers

Btu per passenger-mile - Certificated air carrier energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-15. All of domestic fuel use and half of international fuel use was considered to be domestic use.
Passenger-miles - DOT, BTS, Air Carrier Traffic Statistics, Washington, DC, ww.bts.gov/programs/airline_information/air_carrier_traffic_statistics. Pre-1994 data are from various editions of the FAA Statistical Handbook of Aviation (no longer published). Scheduled service passenger-miles of domestic air carriers and half of international air carriers were used to coincide with fuel use.
Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

## General aviation

Btu per passenger-mile - Data are not available.
Energy use - See Energy Use Sources, p. A-14. Data series shown in Table 9.3.
Passenger-miles - Data are not available.

## Rail

## Intercity

Btu per passenger-mile - Intercity rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-23. Data series shown in Table 9.10.
Passenger-miles - AAR, Railroad Facts, 2011 Edition, and previous annual editions.

## Transit

Btu per passenger-mile - Transit rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-22. Data series shown in Table 9.12.
Passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 9.12.

## Commuter

Btu per passenger-mile - Commuter rail energy use divided by passenger-miles.
Energy use - See Energy Use Sources, p. A-21. Data series shown in Table 9.11.
Passenger-miles - APTA, 2012 Public Transportation Fact Book, Washington, DC, 2012. Data series shown on Table 9.11.

## Freight Mode Energy Intensities

## Truck

Btu per vehicle-mile - Heavy single-unit and combination truck energy use divided by vehicle miles Energy use - See Energy Use Sources (medium/heavy trucks), p. A-11.
Vehicle-miles - DOT, FHWA, Highway Statistics 2010, Table VM-1 and annual editions back to 1996; DOT, FHWA, Highway Statistics Summary to 1995. Data series is the total of vehicle travel data on Tables 5.1 and 5.2.

## Rail

Btu per freight car-mile - Class I rail energy use divided by freight car-miles.
Energy use - See Energy Use Sources, p. A-20. Data series shown in Table 9.8.
Freight car miles - AAR, Railroad Facts, 2011 Edition, Washington, DC, 2011. Data series shown in Table 9.8.

Btu per ton-mile - Class I rail energy use divided by ton-miles.
Energy use - See Energy Use Sources, p. A-20. Data series shown in Table 9.8.
Ton-miles - AAR, Railroad Facts, 2011 Edition, Washington, DC, 2011. Data series shown in Table 9.8.

## Water

Btu per ton-mile - Domestic waterborne commerce energy use on taxable waterways divided by tonmiles on taxable waterways.
Energy use - Modeled by Chrisman A. Dager, University of Tennessee, Knoxville, using Waterborne Commerce Statistics Center detail records and annual IRS reports on the Inland Waterway Trust Fund tax on diesel fuel used on the inland waterway.
Ton-miles - Based on detailed records from the U.S. Department of the Army, Army Corps of Engineers, Waterborne Commerce Statistics Center. Includes only ton-miles on taxable waterways.

## APPENDIX B

## CONVERSIONS

## CONVERSIONS

## A Note about Heating Values

The heat content of a fuel is the quantity of energy released by burning a unit amount of that fuel. However, this value is not absolute and can vary according to several factors. For example, empirical formulae for determining the heating value of liquid fuels depend on the fuels' American Petroleum Institute (API) gravity. The API gravity varies depending on the percent by weight of the chemical constituents and impurities in the fuel, both of which are affected by the combination of raw materials used to produce the fuel and by the type of manufacturing process. Temperature and climatic conditions are also factors.

Because of these variations, the heating values in Table B. 4 may differ from values in other publications. The figures in this report are representative or average values, not absolute ones. The gross (higher) heating values used here agree with those used by the Energy Information Administration (EIA).

Heating values fall into two categories, usually referred to as "higher" (or gross) and "lower" (or net). If the products of fuel combustion are cooled back to the initial fuel-air or fuel-oxidizer mixture temperature and the water formed during combustion is condensed, the energy released by the process is the higher (gross) heating value. If the products of combustion are cooled to the initial fuel-air temperature, but the water is considered to remain as a vapor, the energy released by the process is the lower (net) heating value. Usually the difference between the gross and net heating values for fuels used in transportation is around 5 to 8 percent; however, it is important to be consistent in their use.

Table B. 1
Hydrogen Heat Content

| 1 kilogram hydrogen $=$ |  |
| :---: | :---: |
| Higher heating value | Lower heating value |
| $134,200 \mathrm{Btu}$ | $113,400 \mathrm{Btu}$ |
| 39.3 kWhr | 33.2 kWhr |
| $141,600 \mathrm{~kJ}$ | $119,600 \mathrm{~kJ}$ |
| $33,800 \mathrm{kCal}$ | $28,560 \mathrm{kCal}$ |

Table B. 2
Hydrogen Conversions

|  | Weight |  | Gas |  | Liquid |  |

$1 \mathrm{~m} / \mathrm{sec}=3.281 \mathrm{ft} / \mathrm{s}=2.237 \mathrm{mph}=3.600 \mathrm{~km} / \mathrm{h}$
$1 \mathrm{~km} / \mathrm{h}=0.9114 \mathrm{ft} / \mathrm{s}=0.2778 \mathrm{~m} / \mathrm{s}=0.6214 \mathrm{mph}$
$1 \mathrm{mph}=1.467 \mathrm{ft} / \mathrm{s}=0.4469 \mathrm{~m} / \mathrm{s}=1.609 \mathrm{~km} / \mathrm{h}$

Table B. 9
Alternative Measures of Greenhouse Gases

1 pound methane, measured in carbon units $\left(\mathrm{CH}_{4}\right)$

1 pound carbon dioxide, measured in carbon units ( $\mathrm{CO}_{2}-\mathrm{C}$ )

1 pound carbon monoxide, measured in carbon units (CO-C)

1 pound nitrous oxide, measured in nitrogen units $\left(\mathrm{N}_{2} \mathrm{O}-\mathrm{N}\right)$
1.333 pounds methane, measured at full
$=\quad$ molecular weight $\left(\mathrm{CH}_{4}\right)$
3.6667 pounds carbon dioxide, measured at full
$=$ molecular weight $\left(\mathrm{CO}_{2}\right)$
2.333 pounds carbon monoxide, measured at
$=\quad$ full molecular weight $(\mathrm{CO})$
1.571 pounds nitrous oxide, measured at full molecular weight $\left(\mathrm{N}_{2} \mathrm{O}\right)$

Table B. 10
Volume and Flow Rate Conversions ${ }^{\text {a }}$

| 1 U.S. gal | $=231 \mathrm{in}^{3}$ | 1 liter |
| :--- | :--- | :--- |
|  | $=0.1337 \mathrm{ft}^{3}$ | $=61.02 \mathrm{in.}^{3}$ |
|  | $=3.785$ liters | $=3.531 \times 10^{-2} \mathrm{ft}^{3}$ |
|  | $=0.8321$ imperial gal |  |
|  | $=0.0238 \mathrm{bbl}$ |  |
|  | $=0.003785 \mathrm{~m}^{3}$ |  |
|  |  | $=6.2624 \mathrm{U} . \mathrm{S}$. gal |
|  |  | $=0.000 \mathrm{imperial} \mathrm{m}^{-3} \mathrm{bbl}$ |

A U.S. gallon of gasoline weighs 6.2 pounds

| 1 imperial gal | $=277.4 \mathrm{in}^{3}$ | 1 bbl | $=9702 \mathrm{in}.{ }^{3}$ |
| :---: | :---: | :---: | :---: |
|  | $=0.1606 \mathrm{ft}^{3}$ |  | $=5.615 \mathrm{ft}^{3}$ |
|  | $=4.545$ liters |  | $=158.97$ liters |
|  | $=1.201$ U.S. gal |  | $=42$ U.S. gal |
|  | $=0.0286 \mathrm{bbl}$ |  | $=34.97$ imperial gal |
|  | $=0.004546 \mathrm{~m}^{3}$ |  | $=0.15897 \mathrm{~m}^{3}$ |
| 1 U.S. gal/hr | $=3.209 \mathrm{ft}^{3} / \mathrm{day}$ |  | $=1171 \mathrm{ft}^{3} /$ year |
|  | $=90.84$ liter/day |  | = 33157 liter/year |
|  | $=19.97 \mathrm{imperial}$ gal/day |  | = $7289 \mathrm{imperial} \mathrm{gal} / \mathrm{year}$ |
|  | $=0.5712 \mathrm{bbl} / \mathrm{day}$ |  | $=207.92 \mathrm{bbl} /$ year |

For Imperial gallons, multiply above values by 1.201

| 1 liter/hr | $=0.8474 \mathrm{ft}^{3} / \mathrm{day}$ | $=309.3 \mathrm{ft}^{3} / \mathrm{year}$ |
| :---: | :---: | :---: |
|  | $=6.298$ U.S. gal/day | $=2299$ U.S. gal/year |
|  | $=5.28$ imperial gal/day | = 1927 imperial gal/year |
|  | $=0.1510 \mathrm{bbl} / \mathrm{day}$ | $=55.10 \mathrm{bbl} /$ year |
| $1 \mathrm{bbl} / \mathrm{hr}$ | $=137.8 \mathrm{ft}^{3} / \mathrm{year}$ | $=49187 \mathrm{ft}^{3}$ year |
|  | $=1008$ U.S. gal/day | $=3.679 \times 10^{5}$ U.S. gal/year |
|  | $=839.3$ imperial gal/day | $=3.063 \times 10^{5}$ imperial gal/year |
|  | = 3815 liter/day | $=1.393 \times 10^{6}$ liter/day |

${ }^{a}$ The conversions for flow rates are identical to those for volume measures, if the time units are identical.

${ }^{a}$ For gasoline-fueled vehicles.

Table B. 14
SI Prefixes and Their Values

|  | Value | Prefix | Symbol |
| :--- | :---: | :--- | :---: |
| One million million millionth | $10^{-18}$ | atto | a |
| One thousand million millionth | $10^{-15}$ | femto | f |
| One million millionth | $10^{-12}$ | pico | p |
| One thousand millionth | $10^{-9}$ | nano | n |
| One millionth | $10^{-6}$ | micro | $\mu$ |
| One thousandth | $10^{-3}$ | milli | m |
| One hundredth | $10^{-2}$ | centi | c |
| One tenth | $10^{-1}$ | deci |  |
| One | $10^{0}$ |  |  |
| Ten | $10^{1}$ | deca |  |
| One hundred | $10^{2}$ | hecto |  |
| One thousand | $10^{3}$ | kilo | k |
| One million | $10^{6}$ | mega | M |
| One billion ${ }^{\text {a }}$ | $10^{9}$ | giga | G |
| One trillion $^{\mathrm{a}}$ | $10^{12}$ | tera | T |
| One quadrillion $^{\mathrm{a}}$ | $10^{15}$ | peta | P |
| One quintillion $^{\mathrm{a}}$ | $10^{18}$ | exa | E |

${ }^{a}$ Care should be exercised in the use of this nomenclature, especially in foreign correspondence, as it is either unknown or carries a different value in other countries. A "billion," for example, signifies a value of $10^{12}$ in most other countries.

Table B. 15
Metric Units and Abbreviations

| Quantity | Unit name | Symbol |
| :--- | :--- | :--- |
|  |  |  |
| Energy | joule | J |
| Specific energy | joule/kilogram | $\mathrm{J} / \mathrm{kg}$ |
| Specific energy consumption | joule/kilogram•kilometer | $\mathrm{J} /(\mathrm{kg} \cdot \mathrm{km})$ |
| Energy consumption | joule/kilometer | $\mathrm{J} / \mathrm{km}$ |
| Energy economy | kilometer/kilojoule | $\mathrm{km} / \mathrm{kJ}$ |
| Power | kilowatt | kW |
| Specific power | watt/kilogram | $\mathrm{W} / \mathrm{kg}$ |
| Power density | watt $/$ meter $^{3}$ | $\mathrm{~W} / \mathrm{m}^{3}$ |
| Speed | kilometer/hour | $\mathrm{km} / \mathrm{h}$ |
| Acceleration | meter $/ \mathrm{second}{ }^{2}$ | $\mathrm{~m} / \mathrm{s}^{2}$ |
| Range (distance) | kilometer | km |
| Weight | kilogram | kg |
| Torque | newton•meter | $\mathrm{N} \bullet \mathrm{m}$ |
| Volume | meter | m |
| Mass; payload | kilogram | kg |
| Length; width | meter | m |
| Brake specific fuel consumption | kilogram/joule | $\mathrm{kg} / \mathrm{J}$ |
| Fuel economy (heat engine) | liters $/ 100 \mathrm{~km}$ | $\mathrm{~L} / 100 \mathrm{~km}$ |

Table B. 16
Carbon Coefficients, 2002
(Million metric tons carbon per quadrillion Btu)

| Fuel Type |  |
| :--- | :--- |
| Coal Coal (residential) |  |
| Coal (commercial) | 26.04 |
| Coal (industrial coking) | 26.04 |
| Coal (industrial other) | 25.63 |
| Coal (electric utility) | 25.74 |
| Natural gas | 25.98 |
| Natural gas (pipeline) | 14.47 |
| Natural gas (flared) | 14.92 |
| Petroleum |  |
| Asphalt and road oil | 20.62 |
| Aviation gasoline | 18.87 |
| Crude oil | 20.30 |
| Distillate fuel | 19.95 |
| Jet fuel | 19.33 |
| Kerosene | 19.72 |
| LPG | 16.99 |
| Lubricants | 20.24 |
| Motor gasoline | 19.34 |
| Petrochemical feed | 19.37 |
| Petroleum coke | 27.85 |
| Residual fuel | 21.49 |
| Waxes | 19.81 |

Note: All coefficients based on Higher Heating (Gross Calorific) Value and assume 100 percent combustion.

## Conversion of Constant Dollar Values

Many types of information in this data book are expressed in dollars. Generally, constant dollars are used-that is, dollars of a fixed value for a specific year, such as 1990 dollars. Converting current dollars to constant dollars, or converting constant dollars for one year to constant dollars for another year, requires conversion factors (Table B. 17 and B.18). Table B. 17 shows conversion factors for the Consumer Price Index inflation factors. Table B. 18 shows conversion factors using the Gross National Product inflation factors.

Table B. 17
Consumer Price Inflation (CPI) Index

| From: | 1970 | 1971 | 1972 | 1973 | 1974 | 1975 | 1976 | 1977 | 1978 | 1979 |

Figure C.3. Map of Places where Reformulated Gasoline is Sold

## Source:

U.S. Environmental Protection Agency, www.epa.gov/otaq/rfg/whereyoulive.htm.

Note: Reformulated gasoline is a motor gasoline specially formulated to achieve significant reductions in vehicle emissions of ozone-forming and toxic air pollutants. The Clean Air Act of 1990 mandates reformulated gasoline use in areas with ozone-air pollution problems.

## GLOSSARY

Acceleration power - Measured in kilowatts. Pulse power obtainable from a battery used to accelerate a vehicle. This is based on a constant current pulse for 30 seconds at no less than $2 / 3$ of the maximum open-circuit-voltage, at $80 \%$ depth-of-discharge relative to the battery's rated capacity and at $20 \circ \mathrm{C}$ ambient temperature.

Air Carrier - The commercial system of air transportation consisting of certificated air carriers, air taxis (including commuters), supplemental air carriers, commercial operators of large aircraft, and air travel clubs.

Certificated route air carrier: An air carrier holding a Certificate of Public Convenience and Necessity issued by the Department of Transportation to conduct scheduled interstate services. Nonscheduled or charter operations may also be conducted by these carriers. These carriers operate large aircraft ( 30 seats or more, or a maximum payload capacity of 7,500 pounds or more) in accordance with Federal Aviation Regulation part 121.

Domestic air operator: Commercial air transportation within and between the 50 States and the District of Columbia. Includes operations of certificated route air carriers, Pan American, local service, helicopter, intra-Alaska, intra-Hawaii, all-cargo carriers and other carriers. Also included are transborder operations conducted on the domestic route segments of U.S. air carriers. Domestic operators are classified based on their operating revenue as follows:

Majors - over $\$ 1$ billion
Nationals - \$100-1,000 million
Large Regionals - \$10-99.9 million
Medium Regionals - \$0-9.99 million
International air operator: Commercial air transportation outside the territory of the United States, including operations between the U.S. and foreign countries and between the U.S. and its territories and possessions.

Supplemental air carrier: A class of air carriers which hold certificates authorizing them to perform passenger and cargo charter services supplementing the scheduled service of the certificated route air carriers. Supplemental air carriers are often referred to as nonscheduled air carriers or "nonskeds."

Alcohol - The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Alternative fuel - For transportation applications, includes the following: methanol; denatured ethanol, and other alcohols; fuel mixtures containing 85 percent or more by volume of methanol, denatured ethanol, and other alcohols with gasoline or other fuels; natural gas; liquefied petroleum gas (propane); hydrogen; coal-derived liquid fuels; fuels (other than alcohol) derived from biological materials (biofuels such as soy diesel fuel); and electricity (including electricity from solar energy). The term "alternative fuel" does not include alcohol or other blended portions of primarily petroleum-based fuels used as oxygenates or extenders, i.e. MTBE, ETBE, other ethers, and the 10-percent ethanol portion of gasohol.

Amtrak - See Rail.

Anthropogenic - Human made. Usually used in the context of emissions that are produced as the result of human activities.

## Aviation - See General aviation

Aviation gasoline - All special grades of gasoline for use in aviation reciprocating engines, as given in the American Society for Testing and Materials (ASTM) Specification D 910. Includes all refinery products within the gasoline range that are to be marketed straight or in blends as aviation gasoline without further processing (any refinery operation except mechanical blending). Also included are finished components in the gasoline range which will be used for blending or compounding into aviation gasoline.

Barges - Shallow, nonself-propelled vessels used to carry bulk commodities on the rivers and the Great Lakes.

Battery efficiency - Measured in percentage. Net DC energy delivered on discharge, as a percentage of the total DC energy required to restore the initial state-of-charge. The efficiency value must include energy losses resulting from self-discharge, cell equalization, thermal loss compensation, and all battery-specific auxiliary equipment.

Btu - British thermal unit. The amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit at or near 39.2 degrees Fahrenheit. An average Btu content of fuel is the heat value per quantity of fuel as determined from tests of fuel samples.

Bunker - A storage tank.
Bunkering fuels - Fuels stored in ship bunkers.
Bus -A mode of transit service characterized by roadway vehicles powered by diesel, gasoline, battery, or alternative fuel engines contained within the vehicle.

Intercity bus: A standard size bus equipped with front doors only, high backed seats, luggage compartments separate from the passenger compartment and usually with restroom facilities, for high-speed long distance service.

Motor bus: Rubber-tired, self-propelled, manually-steered bus with fuel supply on board the vehicle. Motor bus types include intercity, school, and transit.

School and other nonrevenue bus: Bus services for which passengers are not directly charged for transportation, either on a per passenger or per vehicle basis.

Transit bus: A bus designed for frequent stop service with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage storage compartments or restroom facilities.

Trolley coach: Rubber-tired electric transit vehicle, manually-steered, propelled by a motor drawing current, normally through overhead wires, from a central power source not on board the vehicle.

Calendar year - The period of time between January 1 and December 31 of any given year.
Captive imports - Products produced overseas specifically for domestic manufacturers.

Car size classifications - Size classifications of cars are established by the Environmental Protection Agency (EPA) as follows:

Minicompact - less than 85 cubic feet of passenger and luggage volume.
Subcompact - between 85 to 100 cubic feet of passenger and luggage volume. Compact - between 100 to 110 cubic feet of passenger and luggage volume. Midsize - between 110 to 120 cubic feet of passenger and luggage volume. Large - more than 120 cubic feet of passenger and luggage volume. Two seater - cars designed primarily to seat only two adults. Station wagons are included with the size class for the sedan of the same name.

Carbon dioxide ( $\mathbf{C O}_{\mathbf{2}} \mathbf{)}$ - A colorless, odorless, non-poisonous gas that is a normal part of the ambient air. Carbon dioxide is a product of fossil fuel combustion.

Carbon monoxide (CO) - A colorless, odorless, highly toxic gas that is a by-product of incomplete fossil fuel combustion. Carbon monoxide, one of the major air pollutants, can be harmful in small amounts if breathed over a certain period of time.

Car-mile (railroad) - A single railroad car moved a distance of one mile.
Cargo ton-mile - See Ton-mile
Certificated route air carriers - See Air carriers.
Class I freight railroad - See Rail.
Coal slurry - Finely crushed coal mixed with sufficient water to form a fluid.
Combination trucks - Consist of a power unit (a truck tractor) and one or more trailing units (a semitrailer or trailer). The most frequently used combination is popularly referred to as a "tractorsemitrailer" or "tractor trailer".

Commercial sector - An energy-consuming sector that consists of service-providing facilities of: businesses; Federal, State, and local governments; and other private and public organizations, such as religious, social or fraternal groups. Includes institutional living quarters.

Commuter rail - A mode of transit service (also called metropolitan rail, regional rail, or suburban rail) characterized by an electric or diesel propelled railway for urban passenger train service consisting of local short distance travel operating between a central city and adjacent suburbs.

## Compact car - See car size classifications.

Compression ignition - The form of ignition that initiates combustion in a diesel engine. The rapid compression of air within the cylinders generates the heat required to ignite the fuel as it is injected.

Constant dollars - A time series of monetary figures is expressed in constant dollars when the effect of change over time in the purchasing power of the dollar has been removed. Usually the data are expressed in terms of dollars of a selected year or the average of a set of years.

Consumer Price Index (CPI) - A measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.

Continuous discharge capacity - Measured as percent of rated energy capacity. Energy delivered in a constant power discharge required by an electric vehicle for hill climbing and/or high-speed cruise, specified as the percent of its rated energy capacity delivered in a one hour constant-power discharge.

Conventional Refueling Station - An establishment for refueling motor vehicles with traditional transportation fuels, such as gasoline and diesel fuel.

Corporate Average Fuel Economy (CAFE) Standards - CAFE standards were originally established by Congress for new cars, and later for light trucks, in Title V of the Motor Vehicle Information and Cost Savings Act (15 U.S.C.1901, et seq.) with subsequent amendments. Under CAFE, car manufacturers are required by law to produce vehicle fleets with a composite sales-weighted fuel economy which cannot be lower than the CAFE standards in a given year, or for every vehicle which does not meet the standard, a fine of $\$ 5.00$ is paid for every one-tenth of a mpg below the standard.

Criteria pollutant - A pollutant determined to be hazardous to human health and regulated under EPA's National Ambient Air Quality Standards. The 1970 amendments to the Clean Air Act require EPA to describe the health and welfare impacts of a pollutant as the "criteria" for inclusion in the regulatory regime.

Crude oil - A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Crude oil imports - The volume of crude oil imported into the 50 States and the District of Columbia, including imports from U.S. territories, but excluding imports of crude oil into the Hawaiian Foreign Trade Zone.

Curb weight - The weight of a vehicle including all standard equipment, spare tire and wheel, all fluids and lubricants to capacity, full tank of fuel, and the weight of major optional accessories normally found on the vehicle.

Current dollars - Represents dollars current at the time designated or at the time of the transaction. In most contexts, the same meaning would be conveyed by the use of the term "dollars." See also constant dollars.

Demand Response - A transit mode that includes passenger cars, vans, and small buses operating in response to calls from passengers to the transit operator who dispatches the vehicles. The vehicles do not operate over a fixed route on a fixed schedule. Can also be known as paratransit or dial-a-ride.

## Diesel fuel - See Distillate fuel oil.

Disposable personal income - See Income.
Distillate fuel oil - The lighter fuel oils distilled off during the refining process. Included are products known as ASTM grades numbers 1 and 2 heating oils, diesel fuels, and number 4 fuel oil. The major uses of distillate fuel oils include heating, fuel for on-and off-highway diesel engines, and railroad diesel fuel.

## Domestic air operator - See Air carrier.

## Domestic water transportation - See Internal water transportation.

E85-85\% ethanol and 15\% gasoline.
E95-95\% ethanol and 5\% gasoline.
Electric utilities sector - Consists of privately and publicly owned establishments which generate electricity primarily for resale.

Emission standards - Limits or ranges established for pollution levels emitted by vehicles as well as stationary sources. The first standards were established under the 1963 Clean Air Act.

## End-use sector - See Sector.

Energy capacity - Measured in kilowatt hours. The energy delivered by the battery, when tested at C/3 discharge rate, up to termination of discharge specified by the battery manufacturer. The required acceleration power must be delivered by the battery at any point up to $80 \%$ of the battery's energy capacity rating.

Energy efficiency - In reference to transportation, the inverse of energy intensiveness: the ratio of outputs from a process to the energy inputs; for example, miles traveled per gallon of fuel (mpg).

Energy intensity - In reference to transportation, the ratio of energy inputs to a process to the useful outputs from that process; for example, gallons of fuel per passenger-mile or Btu per ton-mile.

Ethanol ( $\mathbf{C}_{2} \mathbf{H}_{5} \mathbf{O H}$ ) - Otherwise known as ethyl alcohol, alcohol, or grain-spirit. A clear, colorless, flammable oxygenated hydrocarbon with a boiling point of 78.5 degrees Celsius in the anhydrous state. In transportation, ethanol is used as a vehicle fuel by itself (E100 - 100\% ethanol by volume), blended with gasoline (E85-85\% ethanol by volume), or as a gasoline octane enhancer and oxygenate ( $10 \%$ by volume).

Excise tax - Paid when purchases are made on a specific good, such as gasoline. Excise taxes are often included in the price of the product. There are also excise taxes on activities, such as highway usage by trucks.

Ferry boat - A transit mode comprising vessels carrying passengers and in some cases vehicles over a body of water, and that are generally steam or diesel-powered.

## Fixed operating cost - See Operating cost.

## Fleet vehicles -

Private fleet vehicles: Ideally, a vehicle could be classified as a member of a fleet if it is:
a) operated in mass by a corporation or institution,
b) operated under unified control, or
c) used for non-personal activities.

However, the definition of a fleet is not consistent throughout the fleet industry. Some companies make a distinction between cars that were bought in bulk rather than singularly, or whether they are operated in bulk, as well as the minimum number of vehicles that constitute a fleet (i.e. 4 or $10)$.

Government fleet vehicles: Includes vehicles owned by all Federal, state, county, city, and metro units of government, including toll road operations.

Foreign freight - Movements between the United States and foreign countries and between Puerto Rico, the Virgin Islands, and foreign countries. Trade between U.S. territories and possessions (e.g. Guam, Wake, American Samoa) and foreign countries is excluded. Traffic to or from the Panama Canal Zone is included.

Gas Guzzler Tax - Originates from the 1978 Energy Tax Act (Public Law 95-618). A new car purchaser is required to pay the tax if the car purchased has a combined city/highway fuel economy rating that is below the standard for that year. For model years 1986 and later, the standard is 22.5 mpg .

Gasohol - A mixture of $10 \%$ anhydrous ethanol and $90 \%$ gasoline by volume; 7.5\% anhydrous ethanol and $92.5 \%$ gasoline by volume; or $5.5 \%$ anhydrous ethanol and $94.5 \%$ gasoline by volume. There are other fuels that contain methanol and gasoline, but these fuels are not referred to as gasohol.

Gasoline - See Motor gasoline.
General aviation - That portion of civil aviation which encompasses all facets of aviation except air carriers. It includes any air taxis, commuter air carriers, and air travel clubs which do not hold Certificates of Public Convenience and Necessity.

Global warming potential (GWP) - An index used to compare the relative radiative forcing of different gases without directly calculating the changes in atmospheric concentrations. GWPs are calculated as the ratio of the radiative forcing that would result from the emission of one kilogram of a greenhouse gas to that from the emission of one kilogram of carbon dioxide over a fixed period of time, such as 100 years.

Greenhouse gases - Those gases, such as water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulfur hexafluoride, that are transparent to solar (short-wave) radiation but opaque to long-wave (infrared) radiation, thus preventing long-wave radiant energy from leaving Earth's atmosphere. The net effect is a trapping of absorbed radiation and a tendency to warm the planet's surface.

Gross National Product - A measure of monetary value of the goods and services becoming available to the nation from economic activity. Total value at market prices of all goods and services produced by the nation's economy. Calculated quarterly by the Department of Commerce, the Gross National Product is the broadest available measure of the level of economic activity.

Gross vehicle weight (gvw) - The weight of the empty truck plus the maximum anticipated load weight.
Gross vehicle weight rating (gvwr) - The gross vehicle weight which is assigned to each new truck by the manufacturer. This rating may be different for trucks of the same model because of certain features, such as heavy-duty suspension. Passenger cars do not have gross vehicle weight ratings.

## Heavy-heavy truck - See Truck size classifications.

Heavy rail - A mode of transit service (also called metro, subway, rapid transit, or rapid rail) operating on an electric railway with the capacity for a heavy volume of traffic. Characterized by high speed and rapid acceleration of passenger rail cars.

Household - Consists of all persons who occupy a housing unit, including the related family members and all unrelated persons, if any, who share the housing unit.

Housing unit - A house, apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hallway intended to be used by the occupants of another unit or by the general public, or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

Hybrid-electric vehicles - Combines the benefits of gasoline engines and electric motors and can be configured to obtain different objectives, such as improved fuel economy, increased power, or additional auxiliary power for electronic devices and power tools.

Hydrocarbon (HC) - A compound that contains only hydrogen and carbon. The simplest and lightest forms of hydrocarbon are gaseous. With greater molecular weights they are liquid, while the heaviest are solids.

## Income -

Disposable personal income: Personal income less personal tax and non-tax payments.
National income: The aggregate earnings of labor and property which arise in the current production of goods and services by the nation's economy.

Personal income: The current income received by persons from all sources, net of contributions for social insurance.

Industrial sector - Construction, manufacturing, agricultural and mining establishments.
Inertia weight - The curb weight of a vehicle plus 300 pounds.
Intercity bus - See Bus.
Intermodal - Transportation activities involving more than one mode of transportation, including transportation connections and coordination of various modes.

Internal water transportation - Includes all local (intraport) traffic and traffic between ports or landings wherein the entire movement takes place on inland waterways. Also termed internal are movements involving carriage on both inland waterways and the water of the Great Lakes, and inland movements that cross short stretches of open water that link inland systems.

International air operator - See Air carrier.
International freight - See Foreign freight.
Jet fuel - Includes both naphtha-type and kerosene-type fuels meeting standards for use in aircraft turbine engines. Although most jet fuel is used in aircraft, some is used for other purposes such as generating electricity in gas turbines.

Kerosene-type jet fuel: A quality kerosene product with an average gravity of 40.7 degrees API and $10 \%$ to $90 \%$ distillation temperatures of 217 to 261 degrees centigrade. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. It is a relatively low freezing point distillate of the kerosene type.

Naphtha-type jet fuel: A fuel in the heavy naphtha boiling range with an average gravity of 52.8 degrees API and $10 \%$ to $90 \%$ distillation temperatures of 117 to 233 degrees centigrade used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum.

Kerosene - A petroleum distillate in the 300 to 500 degrees Fahrenheit boiling range and generally having a flash point higher than 100 degrees Fahrenheit by the American Society of Testing and Material (ASTM) Method D56, a gravity range from 40 to 46 degrees API, and a burning point in the range of 150 to 175 degrees Fahrenheit. It is a clean-burning product suitable for use as an illuminant when burned in wick lamps. Includes grades of kerosene called range oil having properties similar to Number 1 fuel oil, but with a gravity of about 43 degrees API and an end point of 625 degrees Fahrenheit. Used in space heaters, cooking stoves, and water heaters.

Kerosene-type jet fuel - See Jet fuel.

Large car - See Car size classifications.
Lease Condensate - A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Light duty vehicles - Cars and light trucks combined.
Light truck - Unless otherwise noted, light trucks are defined in this publication as two-axle, four-tire trucks. The U.S. Bureau of Census classifies all trucks with a gross vehicle weight less than 10,000 pounds as light trucks (See Truck size classifications).

## Light-heavy truck - See Truck size classifications.

Light rail - Mode of transit service (also called streetcar, tramway or trolley) operating passenger rail cars singly (or in short, usually two-car or three-car trains) on fixed rails in right-of-way that is often separated from other traffic for part or much of the way.

Liquified petroleum gas (lpg) - Consists of propane and butane and is usually derived from natural gas. In locations where there is no natural gas and the gasoline consumption is low, naphtha is converted to lpg by catalytic reforming.

Load factor - Total passenger miles divided by total vehicle miles.
Low emission vehicle - Any vehicle certified to the low emission standards which are set by the Federal government and/or the state of California.

M85 - 85\% methanol and 15\% gasoline.

M100 - 100\% methanol.

## Medium truck - See Truck size classifications.

Methanol $\left(\mathbf{C H}_{\mathbf{3}} \mathbf{O H}\right)$ - A colorless highly toxic liquid with essentially no odor and very little taste. It is the simplest alcohol and boils at 64.7 degrees Celsius. In transportation, methanol is used as a vehicle fuel by itself (M100), or blended with gasoline (M85).

Midsize car - See Car size classifications.

Minicompact car - See Car size classifications.
Model year - In this publication, model year is referring to the "sales" model year, the period from October 1 to the next September 31.

Motor bus - See Bus.
Motor gasoline - A mixture of volatile hydrocarbons suitable for operation of an internal combustion engine whose major components are hydrocarbons with boiling points ranging from 78 to 217 degrees centigrade and whose source is distillation of petroleum and cracking, polymerization, and other chemical reactions by which the naturally occurring petroleum hydrocarbons are converted into those that have superior fuel properties.

Regular gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88 . Note: Octane requirements may vary by altitude.

Midgrade gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90 . Note: Octane requirements may vary by altitude.

Premium gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than 90. Note: Octane requirements may vary by altitude.

Reformulated gasoline: Finished motor gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211(k) of the Clean Air Act. For details on this clean fuel program see http://www.epa.gov/otaq/rfg.htm. Note: This category includes oxygenated fuels program reformulated gasoline (OPRG) but excludes reformulated gasoline blendstock for oxygenate blending (RBOB).

MTBE - Methyl Tertiary Butyl Ether-a colorless, flammable, liquid oxygenated hydrocarbon containing 18.15 percent oxygen.

## Naphtha-type jet fuel - See Jet fuel.

National income - See Income.
Nationwide Personal Transportation Survey (NPTS) - A nationwide survey of households that provides information on the characteristics and personal travel patterns of the U.S. population. Surveys were conducted in 1969, 1977, 1983, 1990, and 1995 by the U.S. Bureau of Census for the U.S. Department of Transportation.

Natural gas - A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.

Natural gas, dry: Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream; and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute.

Natural gas, wet: The volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they
occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volumes of natural gas, wet after lease separation, at natural gas processing plants.

Natural gas plant liquids: Natural gas liquids recovered from natural gas in processing plants and from natural gas field facilities and fractionators. Products obtained include ethane, propane, normal butane, isobutane, pentanes plus, and other products from natural gas processing plants.

Nitrogen oxides $\left(\mathbf{N O}_{\mathbf{x}}\right)$ - A product of combustion of fossil fuels whose production increases with the temperature of the process. It can become an air pollutant if concentrations are excessive.

Nonattainment area - Any area that does not meet the national primary or secondary ambient air quality standard established by the Environmental Protection Agency for designated pollutants, such as carbon monoxide and ozone.

Oil Stocks - Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products.

## Operating cost -

Fixed operating cost: In reference to passenger car operating cost, refers to those expenditures that are independent of the amount of use of the car, such as insurance costs, fees for license and registration, depreciation and finance charges.

Variable operating cost: In reference to passenger car operating cost, expenditures which are dependent on the amount of use of the car, such as the cost of gas and oil, tires, and other maintenance.

Organization for Economic Cooperation and Development (OECD) - Consists of Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe: Consists of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

OECD Pacific: Consists of Australia, Japan, and New Zealand.
Organization for Petroleum Exporting Countries (OPEC) - Includes Saudi Arabia, Iran, Venezuela, Libya, Indonesia, United Arab Emirates, Algeria, Nigeria, Ecuador, Gabon, Iraq, Kuwait, and Qatar. Data for Saudi Arabia and Kuwait include their shares from the Partitioned Zone (formerly the Neutral Zone). Angola joined OPEC in December 2006, thus, beginning in 2007, data on OPEC will include Angola.

Arab OPEC - Consists of Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

## Other single-unit truck - See Single-unit truck.

Oxygenate - A substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. Includes fuel ethanol, methanol, and methyl tertiary butyl ether (MTBE).

Paratransit - Mode of transit service (also called demand response or dial-a-ride) characterized by the use of passenger cars, vans or small buses operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations.

Particulates - Carbon particles formed by partial oxidation and reduction of the hydrocarbon fuel. Also included are trace quantities of metal oxides and nitrides, originating from engine wear, component degradation, and inorganic fuel additives. In the transportation sector, particulates are emitted mainly from diesel engines.

Passenger-miles traveled (PMT) - One person traveling the distance of one mile. Total passenger-miles traveled, thus, give the total mileage traveled by all persons.

Passenger rail - See Rail, "Amtrak" and "Transit Railroad".
Persian Gulf countries - Consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Emirates.

Personal Consumption Expenditures (PCE) - As used in the national accounts, the market value of purchases of goods and services by individuals and nonprofit institutions and the value of food, clothing, housing, and financial services received by them as income in kind. It includes the rental value of owner-occupied houses but excludes purchases of dwellings, which are classified as capital goods (investment).

## Personal income - See Income.

Petroleum - A generic term applied to oil and oil products in all forms, such as crude oil, lease condensate, unfinished oil, refined petroleum products, natural gas plant liquids, and nonhydrocarbon compounds blended into finished petroleum products.

Petroleum consumption: A calculated demand for petroleum products obtained by summing domestic production, imports of crude petroleum and natural gas liquids, imports of petroleum products, and the primary stocks at the beginning of the period and then subtracting the exports and the primary stocks at the end of the period.

Petroleum exports: Shipments of petroleum products from the 50 States and the District of Columbia to foreign countries, Puerto Rico, the Virgin Islands, and other U.S. possessions and territories.

Petroleum imports: All imports of crude petroleum, natural gas liquids, and petroleum products from foreign countries and receipts from Guam, Puerto Rico, the Virgin Islands, and the Hawaiian Trade Zone. The commodities included are crude oil, unfinished oils, plant condensate, and refined petroleum products.

Petroleum inventories: The amounts of crude oil, unfinished oil, petroleum products, and natural gas liquids held at refineries, at natural gas processing plants, in pipelines, at bulk terminals operated by refining and pipeline companies, and at independent bulk terminals. Crude oil held in storage on leases is also included; these stocks are known as primary stocks. Secondary stocks-those held by jobbers dealers, service station operators, and consumers-are
excluded. Prior to 1975 , stock held at independent bulk terminals were classified as secondary stocks.

Petroleum products supplied: For each petroleum product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Plug-in hybrid-electric vehicles (PHEVs) - Hybrid-electric vehicles with high capacity batteries that can be charged by plugging them into an electrical outlet or charging station. There are two basic PHEV configurations:

Parallel or Blended PHEV: Both the engine and electric motor are mechanically connected to the wheels, and both propel the vehicle under most driving conditions. Electric-only operation usually occurs only at low speeds.

Series PHEVs, also called Extended Range Electric Vehicles (EREVs): Only the electric motor turns the wheels; the gasoline engine is only used to generate electricity. Series PHEVs can run solely on electricity until the battery needs to be recharged. The gasoline engine will then generate the electricity needed to power the electric motor. For shorter trips, these vehicles might use no gasoline at all.

Processing Gain - The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss - The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Proved Reserves of Crude Oil - The estimated quantities of all liquids defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Quad - Quadrillion, $10^{15}$. In this publication, a Quad refers to Quadrillion Btu.
Rail -
Amtrak (American Railroad Tracks): Operated by the National Railroad Passenger Corporation of Washington, DC. This rail system was created by President Nixon in 1970, and was given the responsibility for the operation of intercity, as distinct from suburban, passenger trains between points designated by the Secretary of Transportation.

Class I freight railroad: Defined by the Interstate Commerce Commission each year based on annual operating revenue. A railroad is dropped from the Class I list if it fails to meet the annual earnings threshold for three consecutive years.

Commuter railroad: Those portions of mainline railroad (not electric railway) transportation operations which encompass urban passenger train service for local travel between a central city and adjacent suburbs. Commuter railroad service-using both locomotive-hauled and selfpropelled railroad passenger cars-is characterized by multi-trip tickets, specific station-to-station fares, and usually only one or two stations in the central business district. Also known as suburban railroad.

Transit railroad: Includes "heavy" and "light" transit rail. Heavy transit rail is characterized by exclusive rights-of-way, multi-car trains, high speed rapid acceleration, sophisticated signaling, and high platform loading. Also known as subway, elevated railway, or metropolitan railway (metro). Light transit rail may be on exclusive or shared rights-of-way, high or low platform loading, multi-car trains or single cars, automated or manually operated. In generic usage, light rail includes streetcars, trolley cars, and tramways.

Refiner sales price - Sales from the refinery made directly to ultimate consumers, including bulk consumers (such as agriculture, industry, and electric utilities) and residential and commercial consumers.

## Reformulated gasoline (RFG) - See Motor gasoline.

RFG area - An ozone nonattainment area designated by the Environmental Protection Agency which requires the use of reformulated gasoline.

Residential sector - An energy consuming sector that consists of living quarters for private households. Excludes institutional living quarters.

Residential Transportation Energy Consumption Survey (RTECS) - This survey was designed by the Energy Information Administration of the Department of Energy to provide information on how energy is used by households for personal vehicles. It has been conducted five times since 1979, the most recent being 1991.

Residual fuel oil - The heavier oils that remain after the distillate fuel oils and lighter hydrocarbons are boiled off in refinery operations. Included are products know as ASTM grade numbers 5 and 6 oil, heavy diesel oil, Navy Special Fuel Oil, Bunker C oil, and acid sludge and pitch used as refinery fuels. Residual fuel oil is used for the production of electric power, for heating, and for various industrial purposes.

Rural - Usually refers to areas with population less than 5,000 .
Sales period - October 1 of the previous year to September 30 of the given year. Approximately the same as a model year.

Sales-weighted miles per gallon (mpg) - Calculation of a composite vehicle fuel economy based on the distribution of vehicle sales.

Scrappage rate - As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that are retired from use (lacking registration) in a given year.

School and other nonrevenue bus - See Bus.
Sector - A group of major energy-consuming components of U.S. society developed to measure and analyze energy use. The sectors most commonly referred to are: residential, commercial, industrial, transportation, and electric power.

Single-unit truck - Includes two-axle, four-tire trucks and other single-unit trucks.
Two-axle, four-tire truck: A motor vehicle consisting primarily of a single motorized device with two axles and four tires.

Other single-unit truck: A motor vehicle consisting primarily of a single motorized device with more than two axles or more than four tires.

Spark ignition engine - An internal combustion engine in which the charge is ignited electrically (e.g., with a spark plug).

Special fuels - Consist primarily of diesel fuel with small amount of liquified petroleum gas, as defined by the Federal Highway Administration.

Specific acceleration power - Measured in watts per kilogram. Acceleration power divided by the battery system weight. Weight must include the total battery system.

Specific energy - Measured in watt hours per kilogram. The rated energy capacity of the battery divided by the total battery system weight.

Subcompact car - See Car size classifications.
Supplemental air carrier - See Air carrier .
Survival rate - As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that will be in use at the end of a given year.

Tax incentives - In general, a means of employing the tax code to stimulate investment in or development of a socially desirable economic objective without direct expenditure from the budget of a given unit of government. Such incentives can take the form of tax exemptions or credits.

Test weight - The weight setting at which a vehicle is tested on a dynomometer by the U.S. Environmental Protection Agency (EPA). This weight is determined by the EPA using the inertia weight of the vehicle.

Ton-mile - The movement of one ton of freight the distance of one mile. Ton-miles are computed by multiplying the weight in tons of each shipment transported by the distance hauled.

## Transmission types -

A3 - Automatic three speed
A4 - Automatic four speed
A5 - Automatic five speed
L4 - Automatic lockup four speed
M5 - Manual five speed
Transit bus - See Bus.
Transit railroad - See Rail.
Transportation sector - Consists of both private and public passenger and freight transportation, as well as government transportation, including military operations.

Truck Inventory and Use Survey (TIUS) - Survey designed to collect data on the characteristics and operational use of the nation's truck population. It is conducted every five years by the U.S. Bureau of the Census. Surveys were conducted in 1963, 1967, 1972, 1977, 1982, 1987, and 1992. For the 1997 survey, it was renamed the Vehicle Inventory and Use Survey in anticipation
of including additional vehicle types. However, no additional vehicle types were added to the 1997 survey.

Trolleybus - Mode of transit service (also called transit coach) using vehicles propelled by a motor drawing current from overhead wires via connecting poles called a trolley pole, from a central power source not onboard the vehicle.

Truck size classifications - U.S. Bureau of the Census has categorized trucks by gross vehicle weight (gvw) as follows:

Light - Less than 10,000 pounds gvw (Also see Light Truck.)
Medium - 10,001 to 20,000 pounds gvw
Light-heavy - 20,001 to 26,000 pounds gvw
Heavy-heavy - 26,001 pounds gvw or more.
Two-axle, four-tire truck - See Single-unit truck.
Two seater car - See Car size classifications.
Ultra-low emission vehicle - Any vehicle certified to the ultra-low emission standards which are set by the Federal government and/or the state of California.

Urban - Usually refers to areas with population of 5,000 or greater.
Vanpool: A ridesharing prearrangement using vans or small buses providing round-trip transportation between the participants's prearranged boarding points and a common and regular destination.

Variable operating cost - See Operating cost.
Vehicle Inventory and Use Survey - See Truck Inventory and Use Survey.
Vehicle-miles traveled (vmt) - One vehicle traveling the distance of one mile. Total vehicle miles, thus, is the total mileage traveled by all vehicles.

Volatile organic compounds (VOCs) - Organic compounds that participate in atmospheric photochemical reactions.

## Waterborne Commerce -

Coastwise: Domestic traffic receiving a carriage over the ocean, or the Gulf of Mexico. Traffic between Great Lakes ports and seacoast ports, when having a carriage over the ocean, is also termed Coastwise.

Domestic: Includes coastwise, lakewise, and internal waterborne movements.
Foreign: Waterborne import, export, and in-transit traffic between the United States, Puerto Rico and the Virgin Islands and any foreign country.

Internal: Vessel movements (origin and destination) which take place solely on inland waterways. An inland waterway is one geographically located within the boundaries of the contiguous 48 states or within the boundaries of the State of Alaska.

Lakewise: Waterborne traffic between the United States ports on the Great Lakes System. The Great Lakes System is treated as a separate waterway system rather than as a part of the inland waterway system. In comparing historical data for the Great Lakes System, one should note that prior to calendar year 1990, marine products, sand and gravel being moved from the Great Lakes to Great Lake destinations were classified as local traffic. From 1990-on, these activities are classified as lakewise traffic.

Well-to-wheel - A life cycle analysis used in transportation to consider the entire energy cycle for a given mode, rather than just tailpipe emissions. The analysis starts at the oil well and ends with the turning wheels of the vehicle.

Zero-emission vehicle - Any vehicle certified to the zero emission standards which are set by the Federal government and/or the state of California. These standards apply to the vehicle emissions only.

U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010 ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 11-13
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 11-14
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2011 ..... 11-15
Carbon Dioxide
World Carbon Dioxide Emissions, 1990 and 2008 ..... 11-2
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
Carbon Dioxide Emissions from a Gallon of Fuel ..... 11-16
Carbon Monoxide
Total National Emissions of Carbon Monoxide, 1970-2011 ..... 12-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005 ..... 12-4
Carriers
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Cars
World Production of Cars and Trucks, 2000-2010 ..... 3-2
U.S. Cars and Trucks in Use, 1970-2010 ..... 3-6
Cars in Operation and Vehicle Travel by Age, 1970 and 2001 ..... 3-12
Summary Statistics for Cars, 1970-2010 ..... 4-2
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
The Gas Guzzler Tax on New Cars ..... 4-25
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 11-13
Census
Household Vehicle Ownership, 1960-2010 Census ..... 8-6
Certificated
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Certification
California Car, Light Truck and Medium Truck Emission Certification Standards ..... 12-21
Characteristics
All Highway Vehicles and Characteristics ..... 3-1
Light Vehicles and Characteristics ..... 4-1
Characteristics (continued)
Heavy Vehicles and Characteristics ..... 5-1
Alternative Fuel and Advanced Technology Vehicles and Characteristics ..... 6-1
Fleet Vehicles and Characteristics ..... 7-1
Household Vehicles and Characteristics ..... 8-1
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density ..... 8-21
Housing Unit Characteristics, 2009 ..... 8-21
Long-Distance Trip Characteristics, 2001 NHTS ..... 8-26
Cities
Clean Cities Coalitions ..... 6-11
City
City Driving Cycle ..... 4-33
New York City Driving Cycle ..... 4-36
Class
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Truck Statistics by Gross Vehicle Weight Class, 2002 ..... 5-6
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002 ..... 5-6
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
Class 1
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks ..... 4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
Class 2a
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks ..... 4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
Class 2b
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks ..... 4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
Class 3-8
Summary Statistics for Class 3-8 Single-Unit Trucks, 1970-2010. ..... 5-2
Class 7-8
Summary Statistics for Class 7-8 Combination Trucks, 1970-2010. ..... 5-3
Class 8
Effect of Terrain on Class 8 Truck Fuel Economy ..... 5-14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination ..... 5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Class 8 Truck Weight by Component ..... 5-18
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008 ..... 5-20
Class I
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2010. ..... 9-8
Summary Statistics for Class I Freight Railroads, 1970-2010. ..... 9-9
Classification
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2011 ..... $11-15$
Clean
Clean Cities Coalitions ..... 6-11
Coalitions
Clean Cities Coalitions ..... 6-11
Cold
Cold Temperature (Cold FTP) Driving Cycle ..... 4-34
Collected
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2010 ..... 4-24
Combination
Summary Statistics for Combination Trucks, 1970-2010 ..... 5-3
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination ..... 5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire
Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Combined
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Combustion
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... $11-7$
Commerce
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2010 ..... 9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2010 ..... 9-6
Commercial
Average Length of Time Commercial Fleet Vehicles are in Service, 2010 ..... 7-3
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2010 ..... 7-3
CommodityGrowth of Freight in the United States: Comparison of the 1997, 2002 and 2007 CommodityFlow Surveys5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Commute
Workers by Commute Time, 1990, 200 and 2010 Census ..... 8-22
Commuter
Energy Intensity of Commuter Rail Systems, 2010 ..... 2-18
Summary Statistics for Commuter Rail Operations, 1984-2010 ..... 9-12
Compared
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2000 and 2010) ..... 3-7
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
Comparison
Comparison of U.S., European, and Japanese Driving Cycles ..... 4-38
Growth of Freight in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Component
Class 8 Truck Weight by Component ..... 5-18
Compounds
Total National Emissions of Volatile Organic Compounds, 1970-2011 ..... 12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Compression
Heavy-Duty Highway Compression Ignition and Spark-Ignition Engines - Evaporative Emission Standards ..... 12-20
Compression-Ignition
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... 12-16
Nonroad Compression-Ignition Engines - Exhaust Emission Standards ..... 12-23
Marine Compression-Ignition (CI) Engines - Exhaust Emission Standards ..... 12-28
ConditioningAir Conditioning (SC03) Driving Cycle4-34
Consumed
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Fuel Consumed by Federal Government Fleets, FY 2000-2011 ..... 7-6
Consumer
Consumer Price Indices, 1970-2011 ..... 10-18
Consumption
World Petroleum Consumption, 1960-2011 ..... $1-5$
World Oil Reserves, Production and Consumption, 2010 ..... 1-6
World Natural Gas Reserves, Production and Consumption, 2010 ..... 1-7
Petroleum Production and Transportation Petroleum Consumption in Context ..... 1-17
United States Petroleum Production and Consumption - All Sectors, 1973-2035 ..... 1-18
United States Petroleum Production, and Transportation Consumption, 1970-2035 ..... 1-19
Consumption of Petroleum by End-Use Sector, 1973-2011 ..... 1-20
Highway Transportation Petroleum Consumption by Mode, 1970-2010 ..... 1-21
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2009 ..... 1-22
World Consumption of Primary Energy, 2009 ..... 2-2
U.S. Consumption of Total Energy by End-Use Sector, 1973-2011 ..... 2-3
Distribution of Energy Consumption by Source, 1973 and 2011 ..... 2-4
Alternative Fuel and Oxygenate Consumption, 2003-2010 ..... 2-5
Ethanol Consumption, 1995-2010 ..... 2-6
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2010 ..... 2-7
Highway Transportation Energy Consumption by Mode, 1970-2010 ..... 2-9
Nonhighway Transportation Energy Consumption by Mode, 1970-2010. ..... 2-10
Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 ..... 2-11
Fuel Consumption from Lawn and Garden Equipment, 2010 ..... 2-12
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2010 ..... 4-17
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010. ..... 11-6
Context
Petroleum Production and Transportation Petroleum Consumption in Context, 1950-2011 ..... 1-17
Conventional
Conventional Refueling Stations, 1993-2010 ..... 4-19
Properties of Conventional and Alternative Fuels ..... 6-13
Conversions
Appendix B. Conversions ..... B-1
CorporateCar Corporate Average Fuel Economy (CAFE) Standards versusSales-Weighted Fuel Economy Estimates, 1978-20114-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2009 ..... 4-24
Corporation
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2009 ..... 9-11
Cost
Car Operating Cost per Mile, 1985-2011 ..... $10-16$
Costs
Costs of Oil Dependence to the U.S. Economy, 1970-2010 ..... 1-12
Fixed Car Operating Costs per Year, 1975-2011. ..... 10-17
Countries
Car Registrations for Selected Countries, 1960-2010 ..... 3-3
Truck and Bus Registrations for Selected Countries, 1960-2010 ..... 3-4

Gasoline Prices for Selected Countries, 1990-2011 ..... 10-3
Diesel Fuel Prices for Selected Countries, 1998-2011 ..... 10-4
Gasoline Prices for Selected Countries, 1990 and 2011 ..... 10-5
Diesel Prices for Selected Countries, 1990 and 2011 ..... 10-6
Country
Imported Crude Oil by Country of Origin, 1973-2011 ..... 1-9
Criteria
Criteria Air Pollutants ..... 12-1
Total National Emissions of the Criteria Air Pollutants by Sector, 2011 ..... 12-2
Crude
World Crude Oil Production, 1960-2011 ..... 1-3
Imported Crude Oil by Country of Origin, 1973-2011 ..... 1-9
Crude Oil Supplies, 1973-2011 ..... 1-10
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2010 ..... 1-14
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2011 ..... 10-7
Curb
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Cycle
Driving Cycle Attributes ..... 4-32
City Driving Cycle ..... 4-33
Highway Driving Cycle ..... 4-33
Air Conditioning (SC03) Driving Cycle ..... 4-34
Cold Temperature (Cold FTP) Driving Cycle ..... 4-34
High Speed (US06) Driving Cycle ..... 4-35
New York City Driving Cycle ..... 4-36
Representative Number Five Driving Cycle ..... 4-36
Cycles
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Comparison of U.S., European, and Japanese Driving Cycles ..... 4-38
Daily
Average Daily Miles Driven (per Driver), 2009 NHTS ..... 8-17
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS ..... 8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density ..... 8-21
Dealerships
New Light Vehicle Dealerships and Sales, 1970-2010 ..... 4-18
Definition
Definition of Wagons in Model Year 2011 ..... 4-8
Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 ..... 4-9
Demand
Summary Statistics on Demand Response Vehicles, 1994-2010 ..... 4-39
Demographic
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTSand 2001, 2009 NHTS8-7
Density
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density ..... 8-21
Dependence
Costs of Oil Dependence to the U.S. Economy, 1970-2010 ..... 1-12
Diesel
Highway Usage of Gasoline and Diesel, 1973-2010 ..... 2-13
Diesel Fuel Prices for Selected Countries, 1998-2011 ..... 10-4
Diesel Prices for Selected Countries, 1990 and 2011 ..... 10-6
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards ..... 12-37
Dioxide
Fuel Economy and Carbon Dioxide Emissions Standards, Model Year 2012-2016 ..... 4-20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016 ..... 4-21
DistanceClass 8 Truck Fuel Economy as a Function of Speed and Tractor-TrailerTire Combination and Percentage of Total Distance Traveled as a Function of Speed.5-16
Share of Vehicle Trips by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS ..... 8-15
Long-Distance Trip Characteristics, 2001 NHTS ..... 8-26
Distribution
Distribution of Energy Consumption by Source, 1973 and 2011 ..... 2-4
Distribution of Trucks over $26,000 \mathrm{lbs}$. Less than Two Years Old by Vehicle- Miles Traveled ..... 5-11
Domestic
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2010 ..... 2-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Domestic (continued)
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2011 ..... 7-4
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2010 ..... 9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2010 ..... 9-6
Average Price of a New Car (Domestic and Import), 1970-2010 ..... 10-15
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
Drive
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
Driven
Average Daily Miles Driven (per Driver), 2009 NHTS ..... 8-17
Driver
Average Daily Miles Driven (per Driver), 2009 NHTS ..... 8-17Driving
Driving Cycle Attributes ..... 4-32
City Driving Cycle ..... 4-33
Highway Driving Cycle ..... 4-33

Fuel Economy and Carbon Dioxide Targets for Model Year 2016. ..... 4-21
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011. ..... 4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2010 ..... 4-24
Fuel Economy by Speed, PSAT Model Results ..... 4-28
Fuel Economy by Speed, 1973, 1984, and 1997 Studies ..... 4-29
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study ..... 4-31
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002. ..... 5-6
Effect of Terrain on Class 8 Truck Fuel Economy ..... 5-14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination ..... 5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
Transportation and the Economy ..... 10-1
Effect
Effect of Terrain on Class 8 Truck Fuel Economy ..... 5-14
Electric
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
Electronic
Share of Heavy Trucks with Selected Electronic Features, 2002 ..... 5-12
Emission
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger
Vehicle - Tier 2 Exhaust Emission Standards ..... $12-14$
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Evaporative Emission Standards ..... $12-15$
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... 12-16
Heavy-Duty Highway Spark-Ignition Engines - Exhaust Emission Standards ..... 12-18
Heavy-Duty Highway Compression Ignition and Spark-Ignition
Engines - Evaporative Emission Standards ..... 12-20
California Car, Light Truck and Medium Truck Emission Certification Standards ..... 12-21
Aircraft - Exhaust Emission Standards ..... 12-22
Nonroad Compression-Ignition Engines - Exhaust Emission Standards ..... 12-23
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... 12-25
Locomotives - Exhaust Emission Standards ..... 12-26
Marine Compression-Ignition (CI) Engines - Exhaust Emission Standards ..... 12-28
Marine Spark-Ignition Engines and Vessels - Exhaust Emission Standards ..... 12-32
Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards ..... 12-34
Emissions
Fuel Economy and Carbon Dioxide Emissions Standards, Model Year 2012-2016 ..... 4-20
Greenhouse Gas Emissions ..... 11-1
World Carbon Dioxide Emissions, 1990 and 2008 ..... 11-2
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010. ..... 11-4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 ..... 11-5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010. ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2010 ..... 11-8
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... 11-11
Carbon Dioxide Emissions from a Gallon of Fuel ..... 11-16
Total National Emissions of the Criteria Air Pollutants by Sector, 2011 ..... 12-2
Total National Emissions of Carbon Monoxide, 1970-2011 ..... 12-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005 ..... 12-4
Total National Emissions of Nitrogen Oxides, 1970-2011 ..... 12-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005 ..... 12-6
Total National Emissions of Volatile Organic Compounds, 1970-2011 ..... 12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Total National Emissions of Particulate Matter (PM-10), 1970-2011 ..... 12-9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-2011 ..... 12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Employment
Transportation-related Employment, 2000 and 2010 ..... 10-19
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2010 ..... 10-20
End-Use
Consumption of Petroleum by End-Use Sector, 1973-2011 ..... 1-20
U.S. Consumption of Total Energy by End-Use Sector, 1973-2011 ..... 2-3
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 ..... 11-5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010 ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Energy
World Consumption of Primary Energy, 2009 ..... 2-2
U.S. Consumption of Total Energy by End-Use Sector, 1973-2011 ..... 2-3
Distribution of Energy Consumption by Source, 1973 and 2011 ..... 2-4
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2010 ..... 2-7
Transportation Energy Use by Mode, 2009-2010 ..... 2-8
Highway Transportation Energy Consumption by Mode, 1970-2010 ..... 2-9
Nonhighway Transportation Energy Consumption by Mode, 1970-2010. ..... 2-10
Passenger Travel and Energy Use, 2010 ..... 2-14
Energy Intensities of Highway Passenger Modes, 1970-2010 ..... 2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2010 ..... 2-16
Energy Intensity of Light Rail Transit Systems, 2010 ..... 2-17
Energy Intensity of Heavy Rail Systems, 2010 ..... 2-18
Energy Intensity of Commuter Rail Systems, 2010 ..... 2-18

Fuel Consumption from Lawn and Garden Equipment, 2010 ..... 2-12
Estimates
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2010 ..... 6-3
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
Ethanol
Ethanol Consumption, 1995-2010 ..... 2-6
European
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Comparison of U.S., European, and Japanese Driving Cycles. ..... 4-38
Evaporative
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty PassengerVehicle - Tier 2 Evaporative Emission Standards12-15
Heavy-Duty Highway Compression Ignition and Spark-Ignition Engines - Evaporative Emission Standards ..... 12-20
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... 12-25
Excise
Federal Excise Taxes on Motor Fuels, 2010 ..... 10-11
Exemptions
State Tax Exemptions for Gasohol, 2010 ..... 10-11
Exhaust
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Exhaust Emission Standards ..... $12-14$
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... 12-16
Heavy-Duty Highway Spark-Ignition Engines - Exhaust Emission Standards ..... 12-18
Aircraft - Exhaust Emission Standards ..... 12-22
Nonroad Compression-Ignition Engines - Exhaust Emission Standards ..... 12-23
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... 12-25
Locomotives - Exhaust Emission Standards ..... 12-26
Marine Compression-Ignition (CI) Engines - Exhaust Emission Standards ..... 12-28
Marine Spark-Ignition Engines and Vessels - Exhaust Emission Standards ..... 12-32
Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards ..... 12-34
Expenditures
Average Annual Expenditures of Households by Income, 2010 ..... 8-4
Annual Household Expenditures for Transportation, 1985-2010 ..... 8-5
Personal Consumption Expenditures, 1970-2011 ..... 10-18
Exports
United States Petroleum Production, Imports and Exports, 1950-2011 ..... $1-16$
Facility
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002 ..... 5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Features
Share of Heavy Trucks with Selected Electronic Features, 2002 ..... 5-12
Federal
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2011 ..... 7-4
Federal Government Vehicles, 2001-2011 ..... 7-5
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2011 ..... 7-6
Fuel Consumed by Federal Government Fleets, FY 2000-2011 ..... 7-6
Federal Government Vehicles by Agency, FY 2011 ..... 7-7
Federal Excise Taxes on Motor Fuels, 2010 ..... 10-11
Federal and State Alternative Fuel Incentives, 2012 ..... 10-12
Federal and State Advanced Technology Incentives, 2012 ..... 10-13
Feedstocks
GREET Model Feedstocks and Fuels ..... $11-10$
Fines
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2010 ..... 4-24
Five
Representative Number Five Driving Cycle ..... 4-36
Fixed
Fixed Car Operating Costs per Year, 1975-2011 ..... 10-17
FleetPercentage of Trucks by Fleet Size and Primary Fueling Facility, 20025-9
Fleet (continued)
Fleet Vehicles and Characteristics. ..... 7-1
Fleet Vehicles in Service as of January 1, 2011 ..... 7-2
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
Average Length of Time Commercial Fleet Vehicles are in Service, 2010 ..... 7-3
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2010 ..... 7-3
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002-2011 ..... 7-6
Fleets
Fuel Consumed by Federal Government Fleets, FY 2000-2011 ..... 7-6
Flow
Growth of Freight in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Footprint
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 11-14
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2011 ..... $11-15$
Fossil
World Fossil Fuel Potential ..... $1-2$
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990-2009 ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... $11-7$
Four-Tire
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2010 ..... 4-3
Freight
Energy Intensities of Freight Modes, 1970-2010 ..... 2-19
Growth of Freight in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2010 ..... 9-8
Summary Statistics for Class I Freight Railroads, 1970-2010. ..... 9-9
FTP
Cold Temperature (Cold FTP) Driving Cycle ..... 4-34
Fuel
World Fossil Fuel Potential ..... 1-2
Alternative Fuel and Oxygenate Consumption, 2003-2010 ..... 2-5
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2010 ..... 2-7
Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 ..... 2-11
Fuel Consumption from Lawn and Garden Equipment, 2010 ..... 2-12
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Fuel (continued)
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2016 ..... 4-20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016. ..... 4-21
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2010 ..... 4-24
Fuel Economy by Speed, PSAT Model Results ..... 4-28
Fuel Economy by Speed, 1973, 1984, and 1997 Studies ..... 4-29
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study ..... 4-31
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002 ..... 5-6
Effect of Terrain on Class 8 Truck Fuel Economy. ..... 5-14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination ..... 5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Alternative Fuel and Advanced Technology Vehicles and Characteristics ..... 6-1
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2010 ..... 6-3
Alternative Fuel Transit Vehicles, 2010 ..... 6-4
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2012 ..... 6-5
Number of Alternative Refuel Sites by State and Fuel Type, 2012 ..... 6-10
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2011 ..... 7-6
Fuel Consumed by Federal Government Fleets, FY 2000-2011 ..... 7-6
Diesel Fuel Prices for Selected Countries, 1998-2011 ..... 10-4
Retail Prices for Motor Fuel, 1978-2011 ..... 10-8
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Federal and State Alternative Fuel Incentives, 2012 ..... 10-12
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010. ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Carbon Dioxide Emissions from a Gallon of Fuel ..... $11-16$
Fueling
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002 ..... 5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Fuels
Properties of Conventional and Alternative Fuels ..... 6-13
Federal Excise Taxes on Motor Fuels, 2010 ..... 10-11
GREET Model Feedstocks and Fuels ..... $11-10$
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... 11-11
Function
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination. ..... 5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Gallon
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2011 ..... 10-7
Carbon Dioxide Emissions from a Gallon of Fuel ..... 11-16
Garden
Fuel Consumption from Lawn and Garden Equipment, 2010 ..... 2-12
Gas
World Natural Gas Reserves, Production and Consumption, 2010 ..... 1-7
The Gas Guzzler Tax on New Cars ..... 4-25
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Tax Receipts from the Sale of Gas Guzzlers, 1980-2010 ..... 4-27
Greenhouse Gas Emissions ..... 11-1
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 ..... 11-5
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2010 ..... 11-8
Gases
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010. ..... 11-4
Gasohol
State Tax Exemptions for Gasohol, 2010 ..... 10-11
Gasoline
Highway Usage of Gasoline and Diesel, 1973-2010 ..... 2-13
Gasoline Prices for Selected Countries, 1990-2011 ..... 10-3
Gasoline Prices for Selected Countries, 1990 and 2011 ..... 10-5
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2011 ..... 10-7
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Gasoline Sulfur Standards ..... 12-36
General
Summary Statistics for General Aviation, 1970-2010 ..... 9-4
Global
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2009 ..... 11-4
Glossary
Glossary ..... G-1
Government
Federal Government Vehicles, 2001-2011 ..... 7-5
Fuel Consumed by Federal Government Fleets, FY 2000-2011 ..... 7-6
Federal Government Vehicles by Agency, FY 2011 ..... 7-7
Greenhouse
Greenhouse Gas Emissions ..... 11-1
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010. ..... 11-4
Total U.S. Greenhouse Emissions by End-Use Sector, 2010 ..... 11-5
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2010 ..... 11-8
GREET
GREET Model ..... 11-9
GREET (continued)
GREET Model Feedstocks and Fuels ..... $11-10$
Gross
Refinery Gross Output by World Region, 2001 and 2011 ..... 1-13
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
Truck Statistics by Gross Vehicle Weight Class, 2002 ..... 5-6
Gross Vehicle Weight vs. Empty Vehicle Weight ..... 5-19
Growth
Oil Price and Economic Growth, 1970-2011 ..... $1-11$
Growth of Freight in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Guzzler
The Gas Guzzler Tax on New Cars ..... 4-25
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Guzzlers
Tax Receipts from the Sale of Gas Guzzlers, 1980-2010 ..... 4-27
Harmonic
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002 ..... 5-6
Heavy
Energy Intensity of Heavy Rail Systems, 2010 ..... 2-18
Heavy Truck Scrappage and Survival Rates ..... 3-18
Heavy Vehicles and Characteristics ..... 5-1
Share of Heavy Trucks with Selected Electronic Features, 2002 ..... 5-12
Heavy-DutyHeavy-Duty Highway Compression-Ignition Engines and UrbanBuses - Exhaust Emission Standards12-16
Heavy-Duty Highway Spark-Ignition Engines - Exhaust Emission Standards ..... 12-18
Heavy-Duty Highway Compression Ignition and Spark-Ignition Engines - Evaporative Emission Standards ..... $12-20$
High
High Speed (US06) Driving Cycle ..... 4-35
Highway
Highway Transportation Petroleum Consumption by Mode, 1970-2010 ..... 1-21
Highway Transportation Energy Consumption by Mode, 1970-2010 ..... 2-9
Highway Usage of Gasoline and Diesel, 1973-2010 ..... 2-13
Energy Intensities of Highway Passenger Modes, 1970-2010 ..... 2-15
All Highway Vehicles and Characteristics ..... 3-1
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2010 ..... 3-11
Highway Driving Cycle ..... 4-33
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2010 ..... 6-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005 ..... 12-4
Highway (continued)
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005 ..... 12-6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... 12-16
Heavy-Duty Highway Spark-Ignition Engines - Exhaust Emission Standards ..... 12-18
Heavy-Duty Highway Compression Ignition and Spark-Ignition Engines - Evaporative Emission Standards ..... 12-20
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards ..... 12-37
Household
Household Vehicles and Characteristics ..... 8-1
Annual Household Expenditures for Transportation, 1985-2010 ..... 8-5
Household Vehicle Ownership, 1960-2010 Census ..... 8-6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Average Annual Miles per Household Vehicle by Vehicle Age ..... 8-13
Household Vehicle Trips, 2009 NHTS ..... 8-17
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS ..... 8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Households
Average Annual Expenditures of Households by Income, 2010 ..... 8-4
Housing
Housing Unit Characteristics, 2009 ..... 8-21
Hybrid
Hybrid and Plug-in Vehicle Sales, 1999-2011 ..... 6-7
Ignition
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... $12-16$
Heavy-Duty Highway Spark-Ignition Engines - Exhaust Emission Standards ..... 12-18
Heavy-Duty Highway Compression Ignition and Spark-Ignition Engines -
Evaporative Emission Standards ..... 12-20
Nonroad Compression-Ignition Engines - Exhaust Emission Standards. ..... 12-23
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... $12-25$
Import
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Import (continued)Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domesticand Import Light Trucks, Model Years 1975-20114-10
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Average Price of a New Car (Domestic and Import), 1970-2010 ..... 10-15
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
Imported
Imported Crude Oil by Country of Origin, 1973-2011 ..... $1-9$
Imports
U.S. Petroleum Imports, 1960-2011 ..... 1-8
United States Petroleum Production, Imports and Exports, 1950-2011 ..... 1-16
Incentives
Federal and State Alternative Fuel Incentives, 2012 ..... 10-12
Federal and State Advanced Technology Incentives, 2012 ..... 10-13
Income
Average Annual Expenditures of Households by Income, 2010 ..... 8-4
Index
Transportation Services Index, January 1990-January 2012 ..... 10-2
Indices
Consumer Price Indices, 1970-2011 ..... 10-18
Input
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2010 ..... $1-14$
Intensities
Energy Intensities of Highway Passenger Modes, 1970-2009 ..... 2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2009 ..... 2-16
Energy Intensities of Freight Modes, 1970-2009 ..... 2-19
Intensity
Energy Intensity of Light Rail Transit Systems, 2010 ..... 2-17
Energy Intensity of Heavy Rail Systems, 2010 ..... 2-18
Energy Intensity of Commuter Rail Systems, 2010 ..... 2-18
Interior
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Intermodal
Intermodal Rail Traffic, 1965-2010 ..... 9-10
International
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2010 ..... 9-5
Japanese
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Comparison of U.S., European, and Japanese Driving Cycles. ..... 4-38
Jet
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Large
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... 12-25
Lawn
Fuel Consumption from Lawn and Garden Equipment, 2010 ..... 2-12
Length
Average Length of Time Business Fleet Vehicles are in Service, 2010 ..... 7-3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-7
Light
Energy Intensity of Light Rail Transit Systems, 2010 ..... 2-17
Light Truck Scrappage and Survival Rates ..... 3-17
Light Vehicles and Characteristics ..... 4-1
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks ..... 4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2010 ..... 4-17
New Light Vehicle Dealerships and Sales, 1970-2010 ..... 4-18
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 11-14
California Car, Light Truck and Medium Truck Emission Certification Standards ..... 12-21
Light-Duty
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty PassengerVehicle - Tier 2 Exhaust Emission Standards .12-14
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Evaporative Emission Standards ..... 12-15
List
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Locomotive
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards ..... 12-37
Locomotives
Locomotives - Exhaust Emission Standards ..... 12-26
Long-Distance
Long-Distance Trip Characteristics, 2001 NHTS ..... 8-26
Major
Percentage of Trucks by Size Ranked by Major Use, 2002 ..... 5-8
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Manufacturer
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2012 ..... 6-5
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
Manufacturing
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... 10-20
Maps
Appendix C. Maps ..... C-1
Marine
Marine Compression-Ignition (CI) Engines - Exhaust Emission Standards ..... 12-28
Marine Spark-Ignition Engines and Vessels - Exhaust Emission Standards ..... 12-32
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards ..... 12-37
Market
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Light Vehicle Market Shares, Model Years 1975-2011 ..... 4-12
MaterialAverage Material Consumption for a Light Vehicle, Model Years 1995, 2000,and 20104-17
Matter
Total National Emissions of Particulate Matter (PM-10), 1970-2011 ..... 12-9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-2011 ..... 12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Mean
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002. ..... 5-6
Means
Means of Transportation to Work, 1980, 1990, 2000 and 2010 Census ..... 8-20
Medium
California Car, Light Truck and Medium Truck Emission Certification Standards ..... 12-21
Medium-Duty
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Exhaust Emission Standards ..... 12-14
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Evaporative Emission Standards ..... 12-15
Methodologies
Appendix A. Sources \& Methodologies ..... A-1
Mile
Car Operating Cost per Mile, 1985-2011 ..... 10-16
Miles
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2010 ..... 3-11
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2011 ..... 7-4
Average Annual Miles per Household Vehicle by Vehicle Age ..... 8-13
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS ..... 8-14
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS ..... 8-16
Average Daily Miles Driven (per Driver), 2009 NHTS ..... 8-17
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS ..... 8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Mode
Highway Transportation Petroleum Consumption by Mode, 1970-2010 ..... 1-21
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2009 ..... 1-22
Transportation Petroleum Use by Mode, 2009-2010. ..... 1-23
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2010. ..... 2-7
Transportation Energy Use by Mode, 2009-2010. ..... 2-8
Highway Transportation Energy Consumption by Mode, 1970-2010. ..... 2-9
Nonhighway Transportation Energy Consumption by Mode, 1970-2010. ..... 2-10
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2010 ..... 11-8
Model
Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 ..... 2-11
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years ..... 3-16
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Definition of Wagons in Model Year 2011 ..... 4-8
Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 ..... 4-9
Model (continued)
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2010 ..... 4-17
Fuel Economy and Carbon Dioxide Emissions Standards, Model Years 2012-2016 ..... 4-20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016 ..... 4-21
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Fuel Economy by Speed, PSAT Model Results ..... 4-28
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2012 ..... 6-5
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
GREET Model ..... 11-9
GREET Model Feedstocks and Fuels ..... $11-10$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
Modes
Energy Intensities of Highway Passenger Modes, 1970-2010 ..... 2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2010 ..... 2-16
Energy Intensities of Freight Modes, 1970-2010 ..... 2-19
Nonhighway Modes ..... 9-1
Monoxide
Total National Emissions of Carbon Monoxide, 1970-2011 ..... 12-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005 ..... 12-4
Motor
Retail Prices for Motor Fuel, 1978-2011 ..... 10-8
Federal Excise Taxes on Motor Fuels, 2010 ..... 10-11
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... 10-20
National
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2010 ..... 9-11
Total National Emissions of the Criteria Air Pollutants by Sector, 2011 ..... 12-2
Total National Emissions of Carbon Monoxide, 1970-2011 ..... 12-3
Total National Emissions of Nitrogen Oxides, 1970-2011 ..... 12-5
Total National Emissions of Volatile Organic Compounds, 1970-2011 ..... 12-7
Total National Emissions of Particulate Matter (PM-10), 1970-2011 ..... 12-9
Total National Emissions of Particulate Matter (PM-2.5), 1990-2011 ..... 12-11
Natural
World Natural Gas Reserves, Production and Consumption, 2010 ..... $1-7$
New
New Retail Vehicle Sales, 1970-2011 ..... 3-15
New Retail Car Sales in the United States, 1970-2011 ..... 4-5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
New Light Vehicle Dealerships and Sales, 1970-2010 ..... 4-18
The Gas Guzzler Tax on New Cars ..... 4-25
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
Average Price of a New Car, 1913-2010 ..... 10-14
Average Price of a New Car (Domestic and Import), 1970-2010 ..... 10-15
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 11-13
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
New York
New York City Driving Cycle ..... 4-36
NHTS
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-7
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-8
Average Number of Vehicles and Vehicle Travel per Household,
1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS ..... 8-10
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS ..... 8-11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS ..... 8-12
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS ..... 8-14
Share of Vehicle Trips by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS ..... 8-16
Household Vehicle Trips, 2009 NHTS ..... 8-17
Average Daily Miles Driven (per Driver), 2009 NHTS ..... 8-17
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS ..... 8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
NHTS (continued)
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Walk and Bike Trips by Trip Purpose, 2009 NHTS ..... 8-24
Long-Distance Trip Characteristics, 2001 NHTS ..... 8-26
Nitrogen
Total National Emissions of Nitrogen Oxides, 1970-2011 ..... 12-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005 ..... 12-6
Nonhighway
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2009 ..... 1-22
Nonhighway Transportation Energy Consumption by Mode, 1970-2009 ..... 2-10
Energy Intensities of Nonhighway Passenger Modes, 1970-2010 ..... 2-16
Nonhighway Modes ..... 9-1
Nonhighway Energy Use Shares, 1970-2010 ..... 9-2
Nonroad
Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 ..... 2-11
Nonroad Compression-Ignition Engines - Exhaust Emission Standards ..... 12-23
Nonroad Large Spark-Ignition Engines - Exhaust and Evaporative Emission Standards ..... 12-25
Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards ..... 12-34
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards ..... 12-37
Non-Truck
Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 ..... 4-9
NPTSDemographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTSand 2001, 2009 NHTS8-7
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS ..... 8-11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS ..... 8-12
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS ..... 8-14
Number
Representative Number Five Driving Cycle ..... 4-36
Number of Alternative Refuel Sites by State and Fuel Type, 2012 ..... 6-10
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2011 ..... 10-9
Numerical
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
Occupancy
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS ..... 8-11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS ..... 8-12
Odometer
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS ..... 8-14
Off-highway
Off-highway Transportation-related Fuel Consumption from the Nonroad Model, 2010 ..... 2-11
Oil
World Crude Oil Production, 1960-2011 ..... 1-3
World Oil Reserves, Production and Consumption, 2010. ..... 1-6
Imported Crude Oil by Country of Origin, 1973-2011 ..... 1-9
Crude Oil Supplies, 1973-2011 ..... 1-10
Oil Price and Economic Growth, 1970-2011 ..... 1-11
Costs of Oil Dependence to the U.S. Economy, 1970-2010 ..... 1-12
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2010 ..... 1-14
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2011 ..... 10-7
On-Road
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008 ..... 5-20
Operating
Car Operating Cost per Mile, 1985-2011 ..... 10-16
Fixed Car Operating Costs per Year, 1975-2011 ..... 10-17
Operation
Cars in Operation and Vehicle Travel by Age, 1970 and 2001 ..... 3-12
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001 ..... 3-13
Operations
Summary Statistics for Commuter Rail Operations, 1984-2010 ..... 9-12
Summary Statistics for Rail Transit Operations, 1970-2010 ..... 9-13
Organic
Total National Emissions of Volatile Organic Compounds, 1970-2011 ..... 12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Origin
Imported Crude Oil by Country of Origin, 1973-2011 ..... 1-9
Other
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1999 and 2010) ..... 3-7
Vehicles per Thousand People in Other Countries, 2000 and 2010 ..... 3-9
Output
Refinery Gross Output by World Region, 2001 and 2011 ..... 1-13
Ownership
Household Vehicle Ownership, 1960-2010 Census ..... 8-6
Oxides
Total National Emissions of Nitrogen Oxides, 1970-2011 ..... 12-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005 ..... 12-6
Oxygenate
Alternative Fuel and Oxygenate Consumption, 2003-2010 ..... 2-5
Particulate
Total National Emissions of Particulate Matter (PM-10), 1970-2011 ..... 12-9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-2011 ..... 12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Parts
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... 10-20
Passenger
Passenger Travel and Energy Use, 2010 ..... 2-14
Energy Intensities of Highway Passenger Modes, 1970-2010 ..... 2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2010 ..... 2-16
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2010 ..... 9-11
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Exhaust Emission Standards ..... 12-14
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger
Vehicle - Tier 2 Evaporative Emission Standards ..... 12-15
PeopleVehicles per Thousand People: U.S. (Over Time) Compared to OtherCountries (in 2000 and 2010)3-7
Vehicles per Thousand People in Other Countries, 2000 and 2010 ..... 3-9
Vehicles per Thousand People in the United States, 1900-2010 ..... 3-10
Percent
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination ..... 5-17
Percentage
Percentage of Trucks by Size Ranked by Major Use, 2002 ..... 5-8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002 ..... 5-9
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire
Combination and Percentage of Total Distance Traveled as a Function of Speed ..... 5-16
PeriodPeriod Sales, Market Shares, and Sales-Weighted Fuel Economies of NewDomestic and Import Cars, Selected Model Years 1975-20104-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New
Domestic and Import Light Trucks, Model Years 1975-2010 ..... 4-10
Personal
Personal Consumption Expenditures, 1970-2011 ..... 10-18
Petroleum
Petroleum Production and Transportation Petroleum Consumption in Context ..... 1-1
World Petroleum Production, 1973-2011 ..... 1-4
World Petroleum Consumption, 1960-2011 ..... 1-5
Petroleum (continued)
U.S. Petroleum Imports, 1960-2011 ..... 1-8
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2010 ..... 1-14
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15
United States Petroleum Production, Imports and Exports, 1950-2011 ..... $1-16$
Petroleum Production and Transportation Petroleum Consumption in Context ..... 1-17
United States Petroleum Production and Consumption - All Sectors, 1973-2035 ..... 1-18
United States Petroleum Production, and Transportation Consumption, 1970-2035 ..... 1-19
Consumption of Petroleum by End-Use Sector, 1973-2011 ..... 1-20
Highway Transportation Petroleum Consumption by Mode, 1970-2010 ..... 1-21
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2009 ..... 1-22
Transportation Petroleum Use by Mode, 2009-2010 ..... 1-23
Plug-In
Hybrid and Plug-in Vehicle Sales, 1999-2011 ..... 6-7
PM-10
Total National Emissions of Particulate Matter (PM-10), 1970-2011 ..... 12-9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
PM-2.5
Total National Emissions of Particulate Matter (PM-2.5), 1990-2011 ..... 12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Pollutants
Criteria Air Pollutants ..... 12-1
Total National Emissions of the Criteria Air Pollutants by Sector, 2011 ..... 12-2
Population
Population and Vehicle Profile, 1950-2010 ..... 8-2
Potential
World Fossil Fuel Potential ..... $1-2$
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010 ..... 11-4
Potentials
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... $11-3$
Pounds
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle- Miles Traveled ..... 5-11
Price
Oil Price and Economic Growth, 1970-2011 ..... 1-11
Average Price of a New Car, 1913-2010 ..... 10-14
Price (continued)
Average Price of a New Car (Domestic and Import), 1970-2010 ..... 10-15
Consumer Price Indices, 1970-2011 ..... 10-18
Prices
Gasoline Prices for Selected Countries, 1990-2011 ..... 10-3
Prices (continued)
Diesel Fuel Prices for Selected Countries, 1998-2011 ..... 10-4
Gasoline Prices for Selected Countries, 1990 and 2011 ..... 10-5
Diesel Prices for Selected Countries, 1990 and 2011 ..... 10-6
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2011 ..... 10-7
Retail Prices for Motor Fuel, 1978-2011 ..... 10-8
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2011 ..... 10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Primary
World Consumption of Primary Energy, 2009 ..... 2-2
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002 ..... 5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Production
Petroleum Production and Transportation Petroleum Consumption in Context ..... 1-1
World Crude Oil Production, 1960-2011 ..... 1-3
World Petroleum Production, 1973-2011 ..... 1-4
World Oil Reserves, Production and Consumption, 2010 ..... 1-6
World Natural Gas Reserves, Production and Consumption, 2010 ..... 1-7
United States Petroleum Production, Imports and Exports, 1950-2011 ..... 1-16
Petroleum Production and Transportation Petroleum Consumption in Context ..... 1-17
United States Petroleum Production and Consumption - All Sectors, 1973-2035 ..... 1-18
United States Petroleum Production, and Transportation Consumption, 1970-2035 ..... 1-19
World Production of Cars and Trucks, 2000-2010. ..... 3-2
Products
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2010 ..... 1-14
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15
Profile
Population and Vehicle Profile, 1950-2010 ..... 8-2
Projected
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Propane
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2011 ..... 10-9
Properties
Properties of Conventional and Alternative Fuels ..... 6-13
PSAT
Fuel Economy by Speed, PSAT Model Results ..... 4-28
Purpose
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS ..... 8-10
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS ..... 8-12
Walk and Bike Trips by Trip Purpose, 2009 NHTS ..... 8-24
Rail
Energy Intensity of Light Rail Transit Systems, 2010 ..... 2-17
Energy Intensity of Heavy Rail Systems, 2010 ..... 2-18
Rail (continued)
Energy Intensity of Commuter Rail Systems, 2010 ..... 2-18
Intermodal Rail Traffic, 1965-2010 ..... 9-10
Summary Statistics for Commuter Rail Operations, 1984-2010 ..... 9-12
Summary Statistics for Rail Transit Operations, 1970-2010 ..... 9-13
Railroad
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2010 ..... 9-8
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2010 ..... 9-11
Railroads
Summary Statistics for Class I Freight Railroads, 1970-2010. ..... 9-9
Ranked
Percentage of Trucks by Size Ranked by Major Use, 2002 ..... 5-8
Class I Railroad Freight Systems in the United States Ranked by
Revenue Ton-Miles, 2009 ..... 9-8
Rates
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years ..... 3-15
Light Truck Scrappage and Survival Rates ..... 3-16
Heavy Truck Scrappage and Survival Rates ..... 3-17
Receipts
Tax Receipts from the Sale of Gas Guzzlers, 1980-2010 ..... 4-27
Recreational
Recreational Boat Energy Use, 1970-2010 ..... 9-7
Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards ..... 12-34
Refiner
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2011 ..... 10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Refinery
Refinery Gross Output by World Region, 2001 and 2011 ..... 1-11
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15
Refuel
Number of Alternative Refuel Sites by State and Fuel Type, 2012 ..... 6-10
Refueling
Conventional Refueling Stations, 1993-2010 ..... 4-19
Region
Refinery Gross Output by World Region, 2001 and 2011 ..... 1-13
Registrations
Car Registrations for Selected Countries, 1960-2010 ..... 3-3
Truck and Bus Registrations for Selected Countries, 1960-2010 ..... 3-4
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
Representative
Representative Number Five Driving Cycle ..... 4-36
Reserves
World Oil Reserves, Production and Consumption, 2010 ..... 1-6
World Natural Gas Reserves, Production and Consumption, 2010 ..... 1-7
Response
Summary Statistics on Demand Response Vehicles, 1994-2010 ..... 4-39
Results
Fuel Economy by Speed, PSAT Model Results ..... 4-28
Retail
New Retail Vehicle Sales, 1970-2011 ..... 3-15
New Retail Car Sales in the United States, 1970-2011 ..... 4-5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
Retail Prices for Motor Fuel, 1978-2011 ..... 10-8
Revenue
Class I Railroad Freight Systems in the United States Ranked by
Revenue Ton-Miles, 2010 ..... 9-8
Route
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Sale
Tax Receipts from the Sale of Gas Guzzlers, 1980-2010 ..... 4-27
Sales
New Retail Vehicle Sales, 1970-2011 ..... 3-15
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999 ..... 4-4
New Retail Car Sales in the United States, 1970-2011 ..... 4-5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
New Light Vehicle Dealerships and Sales, 1970-2010 ..... 4-18
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
Hybrid and Plug-in Vehicle Sales, 1999-2011 ..... 6-7
Bicycle Sales, 1981-2010 ..... 8-23
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2011 ..... 10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2011 ..... 10-10
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 11-13
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... $11-14$
Sales-Weighted
Period Sales, Market Shares, and Sales-Weighted Fuel Economiesof New Domestic and Import Cars, Selected Model Years 1975-20114-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
SC03
Air Conditioning (SC03) Driving Cycle ..... 4-34
Scrappage
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years ..... 3-16
Light Truck Scrappage and Survival Rates ..... 3-17
Heavy Truck Scrappage and Survival Rates ..... 3-18
Sector
Consumption of Petroleum by End-Use Sector, 1973-2011 ..... 1-20
U.S. Consumption of Total Energy by End-Use Sector, 1973-2011 ..... 2-3
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 ..... 11-5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010 ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Total National Emissions of the Criteria Air Pollutants by Sector, 2011 ..... 12-2
Sectors
United States Petroleum Production and Consumption - All Sectors, 1973-2035 ..... 1-18
Selected
Car Registrations for Selected Countries, 1960-2010. ..... 3-3
Truck and Bus Registrations for Selected Countries, 1960-2010. ..... 3-4
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Share of Heavy Trucks with Selected Electronic Features, 2002 ..... 5-12
Gasoline Prices for Selected Countries, 1990-2011 ..... 10-3
Diesel Fuel Prices for Selected Countries, 1998-2011 ..... 10-4
Gasoline Prices for Selected Countries, 1990 and 2011 ..... 10-5
Diesel Prices for Selected Countries, 1990 and 2011 ..... 10-6
Self-Reported
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS ..... 8-14
Service
Fleet Vehicles in Service as of January 1, 2011 ..... 7-2
Average Length of Time Business Fleet Vehicles are in Service, 2010 ..... 7-3
Services
Transportation Services Index, January 1990-January 2012 ..... 10-2
Share
Share of Heavy Trucks with Selected Electronic Features, 2002 ..... 5-12
Share of Vehicle Trips by Trip Distance, 2009 NHTS. ..... 8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS ..... 8-16
Shares
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2010 ..... 3-11
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Nonhighway Energy Use Shares, 1970-2010 ..... 9-2
Single-Unit
Summary Statistics for Heavy Single-Unit Trucks, 1970-2010 ..... 5-2
Sites
Number of Alternative Refuel Sites by State and Fuel Type, 2012 ..... 6-10
Size

U.S. Average Vehicle Age, 1995-2011 ..... 3-14
New Retail Car Sales in the United States, 1970-2011 ..... 4-5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles ..... 4-37
Comparison of U.S., European, and Japanese Driving Cycles. ..... 4-38
United (continued)
Growth of Freight in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-22
Growth of Freight Miles in the United States: Comparison of the 1997, 2002 and 2007 Commodity Flow Surveys ..... 5-23
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density ..... 8-21
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2011 ..... 9-3
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2010 ..... 9-8
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... $10-20$
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010 ..... 11-4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2010 ..... 11-5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2010 ..... 11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in Transportation End-Use Sector ..... 11-7
Urban
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses - Exhaust Emission Standards ..... $12-16$
US06
High Speed (US06) Driving Cycle ..... 4-35
Usage
Highway Usage of Gasoline and Diesel, 1973-2010 ..... 2-13
Use
Transportation Petroleum Use by Mode, 2009-2010 ..... 1-23
Transportation Energy Use by Mode, 2009-2010 ..... 2-8
Passenger Travel and Energy Use, 2010 ..... 2-14
U.S. Cars and Trucks in Use, 1970-2010 ..... 3-6
Percentage of Trucks by Size Ranked by Major Use, 2002 ..... 5-8
Share of Trucks by Major Use and Primary Fueling Facility, 2002 ..... 5-10
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2010 ..... 6-3
Nonhighway Energy Use Shares, 1970-2010 ..... 9-2
Recreational Boat Energy Use, 1970-2010. ..... 9-7
US06
High Speed (US06) Driving Cycle ..... 4-33
Various
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... $11-11$
Vehicle
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2010 ..... 3-11
Cars in Operation and Vehicle Travel by Age, 1970 and 2001 ..... 3-12
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001 ..... 3-13
U.S. Average Vehicle Age, 1995-2011 ..... 3-14
New Retail Vehicle Sales, 1970-2011 ..... 3-15
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Vehicle (continued)
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Average Material Consumption for a Light Vehicle,
Model Years 1995, 2000, and 2010 ..... 4-17
New Light Vehicle Dealerships and Sales, 1970-2010 ..... 4-18
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
Truck Statistics by Gross Vehicle Weight Class, 2002 ..... 5-6
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008 ..... 5-20
Hybrid and Plug-in Vehicle Sales, 1999-2011 ..... 6-7
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010 ..... 7-3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2011 ..... 7-4
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2011 ..... 7-6
Population and Vehicle Profile, 1950-2010 ..... 8-2
Household Vehicle Ownership, 1960-2010 Census ..... 8-6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS ..... 8-11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS ..... 8-12
Average Annual Miles per Household Vehicle by Vehicle Age ..... 8-13
Share of Vehicle Trips by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS ..... 8-15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS ..... 8-16
Household Vehicle Trips, 2009 NHTS ..... 8-17
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS ..... 8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS ..... 8-19
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density ..... 8-21
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... 10-20
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... 11-11
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2011 ..... 11-15
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger
Vehicle - Tier 2 Exhaust Emission Standards ..... $12-14$
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle - Tier 2 Evaporative Emission Standards ..... $12-15$
Vehicle-Miles
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2010 ..... 3-11
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled ..... 5-11
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2010 ..... 7-3
Vehicles and Vehicle-Miles per Capita, 1950-2010 ..... 8-3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS ..... 8-8
Vehicles
All Highway Vehicles and Characteristics ..... 3-1
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2000 and 2010) ..... 3-7
Vehicles (continued)
Vehicles per Thousand People in Other Countries, 2000 and 2010 ..... 3-9
Vehicles per Thousand People in the United States, 1900-2010 ..... 3-10
Light Vehicles and Characteristics ..... 4-1
Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 ..... 4-9
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study ..... 4-31
Summary Statistics on Demand Response Vehicles, 1994-2010 ..... 4-39
Heavy Vehicles and Characteristics ..... 5-1
Alternative Fuel and Advanced Technology Vehicles and Characteristics. ..... 6-1
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2010 ..... 6-3
Alternative Fuel Transit Vehicles, 2010 ..... 6-4
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2012 ..... 6-5
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
Fleet Vehicles and Characteristics. ..... 7-1
Fleet Vehicles in Service as of January 1, 2011 ..... 7-2
Average Length of Time Commercial Fleet Vehicles are in Service, 2010 ..... 7-3
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2010 ..... 7-3
Federal Government Vehicles, 2001-2011 ..... 7-5
Federal Government Vehicles by Agency, FY 2011 ..... 7-7
Household Vehicles and Characteristics ..... 8-1
Vehicles and Vehicle-Miles per Capita, 1950-2010 ..... 8-3
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS ..... 8-9
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS ..... 8-16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS ..... 8-18
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2011 ..... 10-20
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005 ..... 12-4
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005. ..... 12-6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005 ..... 12-10
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 ..... 12-12
Nonroad Recreational Engines and Vehicles - Exhaust Emission Standards ..... 12-34
Vessels
Marine Spark-Ignition Engines and Vessels - Exhaust Emission Standards ..... 12-32
Volatile
Total National Emissions of Volatile Organic Compounds, 1970-2011 ..... 12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005 ..... 12-8
Wagons
Definition of Wagons in Model Year 2011 ..... 4-8
Walk
Walk and Bike Trips by Trip Purpose, 2009 NHTS. ..... 8-24
Warming
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide ..... 11-3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2010. ..... 11-4
Waterborne
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2010 ..... 9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2010 ..... 9-6
Weight
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2011 ..... 4-6
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
New Retail Truck Sales by Gross Vehicle Weight, 1970-2011 ..... 5-4
Truck Statistics by Gross Vehicle Weight Class, 2002 ..... 5-6
Class 8 Truck Weight by Component ..... 5-18
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008 ..... 5-20
Weighted
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2011 ..... 4-23
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2010 ..... $11-13$
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2010 ..... $11-14$
Well
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... $11-11$
Wheel
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies ..... $11-11$
Work
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS ..... 8-15
Means of Transportation to Work, 1980, 1990, 2000 and 2010 Census ..... 8-20
Workers
Workers by Commute Time, 1990, 2000 and 2010 Census ..... 8-22
World
World Fossil Fuel Potential ..... 1-2
World Crude Oil Production, 1960-2011 ..... 1-3
World (continued)
World Petroleum Production, 1973-2011 ..... 1-4
World Petroleum Consumption, 1960-2011 ..... 1-5
World Oil Reserves, Production and Consumption, 2010 ..... 1-6
World Natural Gas Reserves, Production and Consumption, 2010 ..... 1-7
Refinery Gross Output by World Region, 2001 and 2011 ..... 1-13
World Consumption of Primary Energy, 2009 ..... 2-2
World Production of Cars and Trucks, 2000-2010. ..... 3-2
World Carbon Dioxide Emissions, 1990 and 2008 ..... 11-2
Year
Definition of Non-Truck Sport Utility Vehicles in Model Year 2011 ..... 4-9
Fuel Economy and Carbon Dioxide Emissions Standards, Model Years 2012-2016. ..... 4-20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016. ..... 4-21
List of Model Year 2011 Cars with Gas Guzzler Taxes ..... 4-26
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2012. ..... 6-5
Electric Drive Vehicles Available by Manufacturer, Model Year 2012 ..... 6-8
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2010. ..... 7-3
Fixed Car Operating Costs per Year, 1975-2011. ..... 10-17
Years
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years ..... 3-16
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2011 ..... 4-7
Definition of Wagons in Model Year 2011 ..... 4-8
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2011 ..... 4-10
Light Vehicle Market Shares by Size Class, Model Years 1975-2011 ..... 4-11
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-13
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 4-14
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 4-15
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2011 ..... 4-16
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2010 . ..... 4-17
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled ..... 5-11
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2011 ..... 11-13
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2011 ..... 11-14
Yield
Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2011 ..... 1-15

[^0]:    ${ }^{\text {a }}$ Because other liquids and processing gain are not included, the world production is smaller than world petroleum consumption.

[^1]:    ${ }^{\text {a }}$ Includes lease condensate. Excludes natural gas plant liquids.
    ${ }^{\mathrm{b}}$ See Glossary for membership.
    ${ }^{\text {c }}$ OPEC+ includes all OPEC nations plus Russia, Mexico, Norway and Oman.

[^2]:    ${ }^{\text {a }}$ Includes natural gas plant liquids, crude oil and lease condensate. Does not account for all inputs or refinery processing gain.
    ${ }^{\text {b }}$ Organization of Petroleum Exporting Countries. See Glossary for membership.

[^3]:    ${ }^{\text {a }}$ Reserves are 2009 data.

[^4]:    ${ }^{\text {a }}$ Organization of Petroleum Exporting Countries. See Glossary for membership.
    ${ }^{\mathrm{b}}$ Data are not available.

[^5]:    ${ }^{\text {a }}$ Includes jet kerosene and other kerosene.
    ${ }^{\mathrm{b}}$ Includes motor gasoline, jet gasoline, and aviation gasoline.
    ${ }^{\text {c }}$ Organization for Economic Cooperation and Development. See Glossary for membership.

[^6]:    ${ }^{\text {a }}$ Methyl tertiary butyl ether (MTBE).
    ${ }^{\mathrm{b}}$ Includes methanol and other oxygenates.
    ${ }^{\text {c }}$ Reported in "Other" category in this year.
    ${ }^{\mathrm{d}}$ Data are not available.

[^7]:    ${ }^{\text {a }}$ Total domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.
    ${ }^{\mathrm{b}}$ Data are not available.

[^8]:    ${ }^{\text {a }}$ Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 18 for details.
    ${ }^{\mathrm{b}}$ Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).
    ${ }^{\text {c }}$ Due to changes in the FHWA fuel use methodology, motorcycle, bus, and heavy truck data are not comparable with data before the year 2007.

[^9]:    ${ }^{\text {a }}$ Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 18 for details.
    ${ }^{\mathrm{b}}$ Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

[^10]:    ${ }^{\text {a }}$ Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 18 for details.
    ${ }^{\mathrm{b}}$ Two-axle, four-tire trucks.
    ${ }^{\text {c }}$ Civilian consumption only. Totals may not include all possible uses of fuels for transportation (e.g., snowmobiles).

[^11]:    ${ }^{a}$ In transportation, the petroleum category contains some blending agents which are not petroleum.
    ${ }^{\mathrm{b}}$ Includes supplemental gaseous fuels. Transportation sector includes pipeline fuel and natural gas vehicle use.
    ${ }^{\text {c }}$ Includes electrical system energy losses.

[^12]:    ${ }^{\text {a }}$ Civilian consumption only. Totals may not include all possible uses of fuels for transportation (e.g., snowmobiles).
    ${ }^{\mathrm{b}}$ Two-axle, four-tire trucks.

[^13]:    ${ }^{\text {a }}$ Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

[^14]:    ${ }^{a}$ There is no equipment listed for this fuel type.

[^15]:    ${ }^{\text {a }}$ Includes equipment such as aerators, dethatchers, sod cutters, hydro-seeders, turf utility vehicles, golf course greens mowers, and sand trap groomers.
    ${ }^{\mathrm{b}}$ Includes equipment not otherwise classified such as augers, sickle-bar mowers, and wood splitters.

[^16]:    ${ }^{\text {a }}$ Consists primarily of diesel fuel, with small quantities of other fuels, such as liquefied petroleum gas and E85.

[^17]:    ${ }^{\text {a }}$ All two-axle, four-tire trucks.
    ${ }^{\mathrm{b}}$ Series not continuous between 1983 and 1984 because of a change in data source by the American Public Transportation Association (APTA).

[^18]:    ${ }^{\text {a }}$ Data are not available.
    ${ }^{\mathrm{b}}$ Due to changes in the FHWA fuel use methodology, truck data are not comparable with data before the year 2007.

[^19]:    ${ }^{\text {a }}$ Includes all trucks and buses. In the United States, light trucks, such as pickups, vans, and sport-utility vehicles are counted as trucks.

[^20]:    ${ }^{\text {a }}$ Data are not available.
    ${ }^{\text {b }}$ Data from 2000 and later are not comparable to prior data. Canada reclassified autos and trucks prior to 2000.
    ${ }^{\text {c }}$ Data for 1990 and prior include West Germany only. Kraftwagen are included with automobiles.

[^21]:    ${ }^{\text {a }}$ Data are not available.
    ${ }^{\mathrm{b}}$ Data from 2000 and later are not comparable to prior data. Canada reclassified autos and trucks prior to 2000.
    ${ }^{c}$ Data for 1990 and prior include West Germany only. Kraftwagen are included with automobiles.

[^22]:    ${ }^{\text {a }}$ Data are not available.

[^23]:    ${ }^{\text {a }}$ Includes cars from model year 2002 and 2001 which were sold prior to July 1, 2002, and similarly, model years 1971 and 1970 sold prior to July 1, 1970.

[^24]:    ${ }^{\text {a }}$ It was assumed that scrappage for vehicles less than 4 years old is 0 .
    ${ }^{\mathrm{b}}$ The percentage of automobiles which will be in use at the end of the year.
    ${ }^{\text {c }}$ The percentage of automobiles which will be retired from use during the year.
    ${ }^{\mathrm{d}}$ Data are not available.

[^25]:    ${ }^{\text {a }}$ Light trucks are trucks less than $10,000 \mathrm{lbs}$. gross vehicle weight.
    ${ }^{\mathrm{b}}$ It was assumed that scrappage for vehicles less than 4 years old is 0 .
    ${ }^{\mathrm{c}}$ The percentage of light trucks which will be in use during the year.
    ${ }^{\mathrm{d}}$ The percentage of light trucks which will be retired from use at the end of the year.

[^26]:    ${ }^{\text {a }}$ This number differs from R.L. Polk's estimates of "number of cars in use." See Table 3.3.
    ${ }^{\mathrm{b}}$ Fuel economy for car population.
    ${ }^{c}$ Beginning in this year the data were revised to exclude minivans, pickups and sport utility vehicles which may have been previously included.
    ${ }^{\text {d }}$ Due to FHWA methodology changes, data from 2009-on are not comparable with previous data.

[^27]:    ${ }^{\text {a }}$ Beginning in this year the data were revised to include all vans (including mini-vans), pickups and sport utility vehicles.
    ${ }^{\mathrm{b}}$ Due to FHWA methodology changes, data from 2009-on are not comparable with previous data.

[^28]:    ${ }^{\text {a }}$ North American built.
    ${ }^{\mathrm{b}}$ Does not include import tourist deliveries.
    ${ }^{\text {c }}$ Big 3 includes Chrysler, Ford and General Motors.
    ${ }^{\mathrm{d}}$ Data are not available.

[^29]:    ${ }^{\text {a }}$ The fuel economy data on this table are EPA laboratory test values.
    ${ }^{\mathrm{b}}$ No vehicles in this category were sold in this model year.

[^30]:    ${ }^{\text {a }}$ The fuel economy data on this table are EPA laboratory test values.
    ${ }^{\mathrm{b}}$ No vehicles in this category were sold in this model year.

[^31]:    ${ }^{\text {a }} 1$ liter $=61.02$ cubic inches.
    ${ }^{\mathrm{b}}$ No vehicles in this category were sold in this model year.
    ${ }^{\mathrm{c}}$ Data are thru latest available year.
    ${ }^{\mathrm{d}}$ Data are not available.

[^32]:    ${ }^{\text {a }} 1$ liter $=61.02$ cubic inches.
    ${ }^{\mathrm{b}}$ No vehicles in this category were sold in this model year.
    ${ }^{\mathrm{c}}$ Data are not available.

[^33]:    ${ }^{\text {a }}$ No vehicles in this category were sold in this model year.
    ${ }^{\mathrm{b}}$ 1996-2010.

[^34]:    ${ }^{\text {a }}$ Only vehicles with at least 75 percent domestic content can be counted in the average domestic fuel economy for a manufacturer.
    ${ }^{\mathrm{b}}$ Model year as determined by the manufacturer on a vehicle by vehicle basis.
    ${ }^{\text {c }}$ All CAFE calculations are sales-weighted.
    ${ }^{d}$ Projected 2011 required average fuel economy standards value based on pre-model year reports.

[^35]:    ${ }^{\text {a }}$ Only vehicles with at least $75 \%$ domestic content can be counted in the average domestic fuel economy for a manufacturer.
    ${ }^{\mathrm{b}}$ Represents two- and four-wheel drive trucks combined. Gross vehicle weight of 0-6,000 pounds for model year 1978-1979 and 0-8,500 pounds for subsequent years.
    ${ }^{c}$ Model year as determined by the manufacturer on a vehicle by vehicle basis.
    ${ }^{\text {d }}$ All CAFE calculations are sales-weighted.
    ${ }^{\mathrm{e}}$ Standards were set for two-wheel drive and four-wheel drive light trucks, but no combined standard was set in this year.
    ${ }^{\mathrm{f}}$ Data are not available.
    ${ }^{\mathrm{g}}$ Unreformed standards. See Table 4.18 for reformed standards.
    ${ }^{\mathrm{h}}$ Projected 2011 required average fuel economy standards value based on pre-model year reports.

[^36]:    ${ }^{\text {a }}$ These are fines which are actually collected. Fines which are assessed in certain year may not have been collected in that year.
    ${ }^{\mathrm{b}}$ Adjusted using the Consumer Price Inflation Index.

[^37]:    ${ }^{a}$ Tax based on unadjusted combined fuel economy; data shown here are adjusted combined fuel economy.

[^38]:    ${ }^{a}$ From Argonne National Laboratory Advanced Powertrain Research Facility (Vehicle Test Data).

[^39]:    ${ }^{\text {a }}$ Model years 1970 and earlier cars.
    ${ }^{\mathrm{b}}$ Model years 1981-84 cars and light trucks.
    ${ }^{\text {c }}$ Model years 1988-97 cars and light trucks as shown in Table 4.29.
    ${ }^{\mathrm{d}}$ Data are not available.

[^40]:    ${ }^{\text {a }}$ A vehicle's engine doesn't reach maximum fuel efficiency until it is warm.

[^41]:    ${ }^{\text {a }}$ The 1995 composite midsize vehicle is an average of a Chevrolet Lumina, Chrysler Concord, and Ford Taurus. The fuel economies were projected using the National Renewable Energy Laboratory's Advanced Vehicle Simulator (ADVISOR) model.

[^42]:    ${ }^{a}$ The actual Federal Procedure (FTP), which is also the test for emissions certification, repeats the first 505 seconds of the Federal Urban Driving Simulation cycle, hot started, after a 10 minute hot soak. Starting with Model Year 2001, the emissions test-but not the fuel economy test-incorporates a supplemental cycle that simulates aggressive urban driving, coupled with an added air conditioning load.

[^43]:    ${ }^{\text {a }}$ Data are not continuous between 2006 and 2007 due to changes in estimation methodology. See source document for details.

[^44]:    ${ }^{\text {a }}$ The Federal Highway Administration changed the combination truck travel methodology in 1993.
    ${ }^{\mathrm{b}}$ Due to FHWA methodology changes, data from 2007-on are not comparable with previous data.

[^45]:    ${ }^{a}$ Business and personal services.

[^46]:    ${ }^{a}$ Total Fuel Consumed does not include fuel consumed while idling.

[^47]:    ${ }^{\text {a }}$ Bureau of Transportation Statistics and U.S. Bureau of the Census, 2007 Economic Census, 2007 Commodity Flow Survey, December 2008.

[^48]:    a "Truck" as a single mode includes shipments which went by private truck only, for-hire truck only, or a combination of private truck and for-hire truck.
    ${ }^{\mathrm{b}}$ Denotes data do not meet publication standards because of high sampling variability or poor response quality.
    ${ }^{c}$ CFS data for pipeline exclude most shipments of crude oil.

[^49]:    ${ }^{a}$ Not available.

[^50]:    ${ }^{\text {a }} \mathrm{NiMH}=$ Nickel-Metal Hydride; $\mathrm{PbA}=$ Lead-Acid; Mild hybrid $=\mathrm{A}$ vehicle that shuts down the engine when coasting, breaking or stopped while continuing to power accessories. There is however, no electric drivetrain like that found on a full hybrid vehicle.

[^51]:    ${ }^{\text {a }}$ Combined with gasoline.
    ${ }^{\mathrm{b}}$ Combined with diesel.

[^52]:    ${ }^{a}$ Estimates as of July 1. Includes Armed Forces in the United States.

[^53]:    ${ }^{\text {a }}$ Includes all vehicles (light and heavy).

[^54]:    ${ }^{\text {a }}$ It is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

[^55]:    ${ }^{a}$ This category was "Bus or streetcar" in 1980.
    ${ }^{\mathrm{b}}$ Data are not available.

[^56]:    ${ }^{\text {a }}$ A long-distance trip is defined as a trip of 50 miles or more, one-way.
    ${ }^{\mathrm{b}}$ Includes other types of buses.
    ${ }^{\mathrm{c}}$ Not applicable.

[^57]:    ${ }^{a}$ Data are for all U.S. air carriers reporting on Form 41.
    ${ }^{\mathrm{b}}$ Available seats per aircraft is calculated as the ratio of available seat-miles to revenue aircraft-miles.
    ${ }^{c}$ Passenger load factor is calculated as the ratio of revenue passenger-miles to available seat-miles for scheduled and nonscheduled services.
    ${ }^{d}$ Energy use includes fuel purchased abroad for international flights.

[^58]:    ${ }^{\text {a }}$ Active fixed-wing general aviation aircraft only.
    ${ }^{\mathrm{b}}$ Includes rotorcraft.

[^59]:    ${ }^{\text {a }}$ Grand total for self-propelled and non-self-propelled.
    ${ }^{\mathrm{b}}$ These figures are not consistent with the figures on Table 9.3 because intra-territory tons are not included in this table. Intra-territory traffic is traffic between ports in Puerto Rico and the Virgin Islands.

[^60]:    ${ }^{a}$ Does not include self-powered units.
    ${ }^{\mathrm{b}}$ Does not include private or shipper-owned cars. Beginning in 2001, Canadian-owned U.S. railroads are excluded.
    ${ }^{c}$ Tons originated is a more accurate representation of total tonnage than revenue tons. Revenue tons often produces double-counting of loads switched between rail companies.
    ${ }^{d}$ Data represent total locomotives used in freight and passenger service. Separate estimates are not available.

[^61]:    ${ }^{\text {a }}$ Beginning in 1995, the Grand Trunk Western Railroad and the Soo Line Railroad Company are excluded. Beginning in 1999, the Illinois Central data are excluded. Beginning in 2002, the Wisconsin Central data are excluded.
    ${ }^{\mathrm{b}}$ Data are not available.

[^62]:    ${ }^{\text {a }}$ Data are not available.
    ${ }^{\mathrm{b}}$ Energy use for 1994 on is not directly comparable to earlier years. Some commuter rail energy use may have been inadvertently included in earlier years.

[^63]:    ${ }^{\text {a }}$ Heavy rail and light rail. Series not continuous between 1983 and 1984 because of a change in data source by the American Public Transit Association (APTA). Beginning in 1984, data provided by APTA are taken from mandatory reports filed with the Urban Mass Transit Administration (UMTA). Data for prior years were provided on a voluntary basis by APTA members and expanded statistically.
    ${ }^{\text {b }}$ 1970-79 data represents total passenger rides; after 1979, data represents unlinked passenger trips.
    ${ }^{\text {c }}$ Estimated for years 1970-76 based on an average trip length of 5.8 miles.
    ${ }^{\mathrm{d}}$ Calculated as the ratio of passenger-miles to passenger trips.
    ${ }^{\mathrm{e}}$ Large system-to-system variations exist within this category.
    ${ }^{\mathrm{f}}$ Data are not available.
    ${ }^{\mathrm{g}}$ Average annual percentage change is calculated for years 1980-2010.

[^64]:    ${ }^{a}$ Prices represent the retail prices (including taxes) for regular unleaded gasoline, except for France and the United Kingdom which are premium unleaded gasoline.
    b $3^{\text {rd }}$ quarter 2011.
    ${ }^{c}$ Data are not available.
    ${ }^{\mathrm{d}}$ Premium gasoline.
    ${ }^{e}$ These estimates are international comparisons only and do not necessarily correspond to gasoline price estimates in other sections of the book.
    ${ }^{\mathrm{f}}$ Adjusted by the U.S. Consumer Price Inflation Index.

[^65]:    ${ }^{a}$ Prices represent the retail prices (including taxes) for car diesel fuel for non-commercial (household) use.
    ${ }^{\mathrm{b}} 3^{\text {rd }}$ quarter 2011.
    ${ }^{\text {c }}$ Data are not available.
    ${ }^{d}$ These estimates are for international comparisons only and do not necessarily correspond to gasoline price estimates in other sections of the book.
    ${ }^{\mathrm{e}}$ Adjusted by the U.S. Consumer Price Inflation Index.

[^66]:    ${ }^{\text {a }}$ Refiner acquisition cost of composite (domestic and imported) crude oil.
    ${ }^{\mathrm{b}}$ Average for all types. These prices were collected from a sample of service stations in 85 urban areas selected to represent all urban consumers. Urban consumers make up about $80 \%$ of the total U.S. population.
    ${ }^{c}$ Adjusted by the Consumer Price Inflation Index.

[^67]:    ${ }^{\text {a }}$ 1980-1993: Collected from a survey of prices on January 1 of the current year. 1994-on: Annual average.
    ${ }^{\mathrm{b}}$ These prices were collected from a sample of service stations in 85 urban areas selected to represent all urban consumers. Urban consumers make up about 80 percent of the total U.S. population.
    ${ }^{c}$ Adjusted by the Consumer Price Inflation Index.
    ${ }^{\mathrm{d}}$ Data are not available.
    ${ }^{\mathrm{e}}$ Average annual percentage change is from the earliest year possible to 2011.

[^68]:    ${ }^{\text {a }}$ Consumer grade.
    ${ }^{\mathrm{b}}$ Adjusted by the Consumer Price Inflation Index.

[^69]:    ${ }^{\text {a }}$ All gasohol blends are taxed at the same rate.

[^70]:    ${ }^{a}$ Includes transplants.
    ${ }^{\mathrm{b}}$ Adjusted by the Consumer Price Inflation Index.

[^71]:    ${ }^{\text {a }}$ Adjusted by the Consumer Price Inflation Index.

[^72]:    ${ }^{\text {a }}$ Adjusted by the Consumer Price Inflation Index.
    ${ }^{\mathrm{b}}$ Fire \& Theft: $\$ 50$ deductible 1975 through 1977; \$100 deductible 1978 through 1992; \$250 deductible for 1993 - on. Collision: $\$ 100$ deductible through 1977; \$250 deductible 1978 through 1992; $\$ 500$ deductible for 1993 - on. Property Damage \& Liability: coverage $=\$ 100,000 / \$ 300,000$.
    ${ }^{\mathrm{c}}$ Data are not available.

[^73]:    ${ }^{\text {a }}$ Adjusted by the GNP price deflator.
    ${ }^{\mathrm{b}}$ Transportation Consumer Price Index includes new and used cars, gasoline, car insurance rates, intracity mass transit, intracity bus fare, and airline fares.

[^74]:    ${ }^{a}$ Not seasonally adjusted.

[^75]:    ${ }^{\text {a }}$ Not seasonally adjusted.

[^76]:    ${ }^{a}$ No single lifetime can be defined for carbon dioxide due to different rates of uptake by different removal processes.
    ${ }^{\mathrm{b}}$ Hydrofluorocarbons
    ${ }^{\text {c }}$ Perfluorocarbons

[^77]:    ${ }^{\text {a }}$ Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).
    ${ }^{\mathrm{b}}$ GWP $=$ Global warming potential. Includes HFC-hydrofluorocarbons; PFC-perfluorocarbons; and $\mathrm{SF}_{6}{ }^{-}$ sulfur hexaflouride.

[^78]:    ${ }^{\text {a }}$ Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).

[^79]:    ${ }^{\text {a }}$ Includes energy from petroleum, coal, and natural gas. Electric utility emissions are distributed across consumption sectors.

[^80]:    ${ }^{\text {a }}$ Annual carbon footprint is based on 15,000 miles of annual driving. Includes tailpipe plus upstream emissions.
    ${ }^{\mathrm{b}}$ No vehicles in this category were sold in this model year.
    ${ }^{\mathrm{c}}$ Data are not available.

[^81]:    ${ }^{\text {a }}$ Annual carbon footprint is based on 15,000 miles of annual driving. Includes tailpipe plus upstream emissions

[^82]:    ${ }^{\text {a }}$ Annual carbon footprint is based on 15,000 miles of annual driving. Includes tailpipe and upstream emissions.
    ${ }^{\mathrm{b}}$ Data are not available.
    ${ }^{\text {c }}$ Not applicable.

[^83]:    ${ }^{\text {a }}$ The sums of subcategories may not equal total due to rounding.
    ${ }^{\mathrm{b}}$ Less than 8,500 pounds.

[^84]:    ${ }^{\text {a }}$ The sums of subcategories may not equal total due to rounding.

[^85]:    ${ }^{a}$ The sum of subcategories may not equal total due to rounding. The EPA's definition of volatile organic compounds excludes methane, ethane, and certain other nonphotochemically reactive organic compounds.

[^86]:    ${ }^{\text {a }}$ The sums of subcategories may not equal total due to rounding.
    ${ }^{\mathrm{b}}$ Less than 8,500 pounds.

[^87]:    ${ }^{\text {a }}$ The sums of subcategories may not equal total due to rounding.
    ${ }^{\mathrm{b}}$ Less than 8,500 pounds.

[^88]:    ${ }^{\text {a }}$ In lieu of intermediate useful life standards ( $50,000 \mathrm{miles}$ ) or to gain additional nitrogen oxides credit, manufacturers may optionally certify to the Tier 2 exhaust emission standards with a useful life of 150,000 miles.
    ${ }^{\mathrm{b}}$ Bins 9-11 expired in 2006 for light-duty vehicles and light light-duty trucks and 2008 for heavy light-duty trucks and medium-duty passenger vehicles.
    ${ }^{c}$ Pollutants with two numbers have a separate certification standard (1st number) and in-use standard (2nd number).

[^89]:    ${ }^{\text {a }}$ For liquefied petroleum gas-fueled light-duty vehicles (LDV), light-duty trucks (LDT), and medium-duty passenger vehicles (MDPV): 0.15 grams hydrocarbon per gallon ( 0.04 grams per liter) of fuel dispensed.
    ${ }^{\mathrm{b}}$ Refueling standards for heavy light-duty trucks (HLDT) are subject to phase-in requirements. MDPVs must also comply with the phase-in requirement and must be grouped with HLDTs to determine phase-in compliance.

[^90]:    ${ }^{\text {a }}$ For methanol-fueled engines, the standard is for total hydrocarbon equivalent (THCE).
    ${ }^{\mathrm{b}}$ For methanol and alcohol fueled vehicles the standard is for non-methane hydrocarbon equivalent (NMHCE).
    ${ }^{\text {c }}$ For methanol fueled engines the standard is for nitrogen oxides (NOx) plus NMHCE.
    ${ }^{\mathrm{d}}$ Standards for heavy-duty engines are expressed in grams per brake horsepower-hour (g/bhp-hr). Starting with the 1998 model year, crankcase emissions are not allowed.
    ${ }^{\mathrm{e}}$ Standards for 1990 apply to gasoline and methanol-fueled engines.
    ${ }^{\mathrm{f}}$ Standards for 1991 and later apply to gasoline and methanol engines and are optional for natural gas and Liquefied Petroleum Gas-fueled engines through the 1996 model year.

[^91]:    ${ }^{\mathrm{h}}$ For natural gas fueled engines the standard is $1.7 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$ NMHC.
    ${ }^{1}$ The NOx standard is 5.0 for all natural gas-fueled engines.
    ${ }^{\mathrm{j}}$ This standard applies to the following engines utilizing aftertreatment technology (except for methanol) for the following model years: gasoline/1990+; natural gas and LPG/1991+; methanol/1990+. Starting in 2005, engines certified to on-board diagnostics requirements are not required to meet the idle carbon monoxide (CO) standard.
    ${ }^{\mathrm{k}}$ Useful life is expressed in years or miles, whichever comes first. Useful life for the 1998 and later NOx standard and for all 2004 standards is 10 years or 110,000 miles, whichever comes first.
    ${ }^{1}$ Manufacturers can choose this standard or one of the following options: (1) a standard of $1.5 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$ NMHC+NOX that applies to the 2004 through 2007 model years, with complete heavy-duty vehicle standards taking effect in 2005; or (2) a standard of $1.5 \mathrm{~g} / \mathrm{bhp}-\mathrm{hr}$ NMHC + NOX that would apply to the 2003 through 2007 heavy-duty engines and optionally to 2003 through 2006 complete heavy-duty vehicles.
    ${ }^{m}$ Standard is expressed as non-methane organic gas, but compliance can optionally be shown using measurement of NMHC or total hydrocarbon (THC).
    ${ }^{n}$ Complete heavy-duty vehicles have the primary load-carrying container or device attached. Incomplete heavy-duty vehicles are certified to heavy-duty engine standards. Standards for complete heavy-duty vehicles are expressed in grams per mile ( $\mathrm{g} / \mathrm{mi}$ ). Starting in 2005 (or 2003 or 2004 depending on the selected phase in option; see footnote 1 ), complete heavy-duty vehicles under $14,000 \mathrm{lbs}$ gross vehicle weight are tested on chassis-based rather than engine-based procedures and must meet these complete heavy-duty vehicle standards.
    ${ }^{\circ}$ Although expressed as NMHC, compliance can optionally be shown using measurement of NMOG or THC.
    ${ }^{\mathrm{p}}$ At least 50 percent of a manufacturer's sales must meet these standards in 2008, with 100 percent required in 2009.
    ${ }^{9}$ Gross vehicle weight ranges are more accurately specified as follows: $8,500 \leq \mathrm{GVW} \leq 10,000$ and $10,000<$ GVW $<14,000$.

[^92]:    ${ }^{\text {a }}$ Applies to gasoline and methanol engines. Standard is hydrocarbon (HC) for gasoline engines, total hydrocarbon equivalent (THCE) for methanol engines.
    ${ }^{\mathrm{b}}$ For spark-ignition (SI) engines, standard applies to gasoline, methanol, natural gas, and liquefied petroleum gas engines. For compression-ignition (CI) engines, standard applies to methanol, natural gas, and liquefied petroleum gas engines. Standard is THCE for methanol engines, HC for others.
    ${ }^{c}$ For SI engines, standard applies to gasoline and methanol engines. For CI engines, standard applies to methanol engines. Standard is THCE for methanol engines, HC for others.
    ${ }^{\mathrm{d}}$ Useful life is expressed in years or miles, whichever comes first.
    ${ }^{\mathrm{e}}$ Vehicles over 26,000 pounds gross vehicle weight may demonstrate compliance with an engineering design evaluation in lieu of testing.
    ${ }^{\mathrm{f}}$ A new enhanced evaporative test procedure applies, which is considerably more stringent than the previous test procedure despite the fact that the standard values do not change from prior years. Gasoline and methanol engines are phased in at the following rates of a manufacturer's sales for the specified model year: 1996: 20 percent; 1997: 40 percent; 1998: 90 percent; 1999: 100 percent.
    ${ }^{\mathrm{g}}$ A new enhanced evaporative test procedure applies, which is considerably more stringent than the previous test procedure despite the fact that the standard values do not change from prior years. Methanol-fueled vehicles are phased in at a rate of 90 percent of a manufacturer's production in 1998 and 100 percent in 1999.

[^93]:    ${ }^{\text {a }}$ Smoke emissions may not exceed 20 percent during the acceleration mode, 15 percent during the lugging mode, and 50 percent during the peaks in either mode. Smoke emission standards do not apply to single-cylinder engines, constant-speed engines, or engines certified to a PM emission standard of 0.07 grams per kilowatt-hour ( $\mathrm{g} / \mathrm{kW}-\mathrm{hr}$ ) or lower. Smoke emissions are measured using procedures in 40 CFR Part 86 Subpart I.
    ${ }^{\mathrm{b}}$ Useful life and warranty period are expressed hours and years, whichever comes first.
    ${ }^{\mathrm{c}}$ Hand-startable air-cooled direct injection engines may optionally meet a PM standard of $0.60 \mathrm{~g} / \mathrm{kW}$ hr . These engines may optionally meet Tier 2 standards through the 2009 model years. In 2010 these engines are required to meet a PM standard of $0.60 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.
    ${ }^{\mathrm{d}}$ Useful life for constant speed engines with rated speed 3,000 revolutions per minute (rpm) or higher is 5 years or 3,000 hours, whichever comes first.
    ${ }^{\text {e }}$ These Tier 3 standards apply only to manufacturers selecting Tier 4 Option 2. Manufacturers selecting Tier 4 Option 1 will be meeting those standards in lieu of Tier 3 standards.
    ${ }^{\mathrm{f}}$ A manufacturer may certify all their engines to either Option 1 or Option 2 sets of standards starting in the indicated model year. Manufacturers selecting Option 2 must meet Tier 3 standards in the 2008-2011 model years.
    ${ }^{\mathrm{g}}$ These standards are phase-out standards. Not more than 50 percent of a manufacturer's engine production is allowed to meet these standards in each model year of the phase out period. Engines not meeting these standards must meet the final Tier 4 standards.
    ${ }^{\mathrm{h}}$ These standards are phased in during the indicated years. At least 50 percent of a manufacturer's engine production must meet these standards during each year of the phase in. Engines not meeting these standards must meet the applicable phase-out standards.
    ${ }^{1}$ For Tier 1 engines the standard is for total hydrocarbons.
    ${ }^{\mathrm{j}}$ The NOx standard for generator sets is $0.67 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.
    ${ }^{\mathrm{k}}$ The PM standard for generator sets is $0.03 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.

[^94]:    ${ }^{\text {a }}$ These standards apply to locomotives that are propelled by engines with total rated horsepower (hp) of 750 kilowatts ( $\mathrm{kW} \mathrm{)} \mathrm{( } \mathrm{1006hp} \mathrm{)} \mathrm{or} \mathrm{more}$, requirements of locomotives. This does not include vehicles propelled by engines with total rated horsepower of less than 750 kW (1006 hp); see the requirements in 40 Code of Federal Regulations (CFR) Parts 86, 89 and 1039. The test procedures specify chassis-based testing of locomotives. These test procedures include certification testing, production line testing, and in-use testing using the Federal Test Procedure (FTP) when the locomotive has reached between 50-70 percent of its useful life.
    ${ }^{\mathrm{b}}$ Line-haul locomotives are powered by an engine with a maximum rated power (or a combination of engines having a total rated power) greater than 2300 hp . Switch locomotives are powered by an engine with a maximum rated power (or a combination of engines having a total rated power) of 2300 hp or less.
    ${ }^{\text {c }}$ The Tier 0 standards apply to locomotives manufactured after 1972 when they are manufactured or remanufactured. Note that interim standards may apply for Tier 0 or Tier 1 locomotives remanufactured in 2008 or 2009, or for Tier 2 locomotives manufactured or remanufactured in 2008-2012.
    ${ }_{d}$ Line-haul locomotives subject to the Tier 0 through Tier 2 emission standards must also meet switch standards of the same tier.
    ${ }^{\text {e }}$ The Tier 0 standards apply for 1993-2001 locomotives not originally manufactured with a separate loop intake air cooling system.
    ${ }^{\mathrm{f}}$ Tier 3 line-haul locomotives must also meet Tier 2 switch standards.
    ${ }^{\mathrm{g}}$ Manufacturers using credits may elect to meet a combined nitrogen oxides (NOx) plus hydrocarbon (HC) standard of 1.4 grams per brakehorsepower-hour ( $\mathrm{g} / \mathrm{bhp}-\mathrm{hr}$ ) instead of the otherwise applicable Tier 4 NOx and HC standards.
    ${ }^{\text {h }}$ Tier 1 and Tier 2 switch locomotives must also meet line-haul standards of the same tier.
    ${ }^{\mathrm{i}}$ The numerical emission standards for HC must be met based on the following types of hydrocarbon emissions for locomotives powered by the following fuels: (1) alcohol: total hydrocarbon equivalent (THCE) emissions for Tier 3 and earlier locomotives, and non-methane hydrocarbon equivalent (NMHCE) for Tier 4; (2) natural gas and liquefied petroleum gas: non-methane hydrocarbon (NMHC) emissions; and (3) diesel: total hydrocarbon (THC) emissions for Tier 3 and earlier locomotives, and NMHC for Tier 4.

[^95]:     displacement less than 5.0 liters per cylinder (L/cylinder); Category 2 marine engines have a displacement greater than or equal to $5.0 \mathrm{~L} /$ cylinder and less than $30 \mathrm{~L} / \mathrm{cylinder}$; and Category 3 marine engines have a displacement greater than or equal to $30.0 \mathrm{~L} /$ cylinder. For Tiers 3 and 4, Category 1 represents engines up to $7 \mathrm{~L} /$ cylinder displacement; and Category 2 includes engines from 7 to $30 \mathrm{~L} /$ cylinder. The definition of Category 3 marine engines remains the same.
    ${ }^{\mathrm{b}}$ Tiers 1 and 2 for marine engines less than 37 kW are subject to the same emission standards as for landbased engines. See Table 1 in 40 Code of Federal Regulations (CFR) Part 89.112 and 40 CFR Part 89.104.
    ${ }^{c}$ For Tiers 1 and 2, this refers to the rated power; for Tiers 3 and 4, this refers to the maximum engine power.
    ${ }^{\mathrm{d}}$ Total hydrocarbon (THC) plus nitrogen oxides (NOx) for Tier 2 standards.
    ${ }^{\mathrm{e}}$ Useful life is expressed in hours or years, whichever comes first. For Tiers 3 and 4, a longer useful life in hours for an engine family must be specified if either:1) the engine is designed, advertised, or marketed to operate longer than the minimum useful life; or 2 ) the basic mechanical warranty is longer than the minimum useful life.
    ${ }^{\mathrm{f}}$ Warranty period is expressed in years and hours, whichever comes first.
    ${ }^{\mathrm{g}}$ For Tiers 3 and 4, there are no evaporative emission standards for diesel-fueled engines, or engines using other nonvolatile or nonliquid fuels (e.g., natural gas). If an engine uses a volatile liquid fuel, such as methanol, the engine's fuel system and the vessel in which the engine is installed must meet the evaporative emission requirements of 40 Code of Federal Regulations (CFR) Part 1045 that apply with respect to spark-ignition engines. Manufacturers subject to evaporative emission standards must meet the requirements of 40 CFR 1045.112 as described in 40 CFR 1060.1(a)(2).
    ${ }^{\mathrm{h}}$ Indicates the model years for which the specified standards start.
    ${ }^{i} \mathrm{~N}$ is the maximum test speed of the engine in revolutions per minute (rpm).
    ${ }^{\mathrm{j}}$ Manufacturers of Tier 3 engines greater than or equal to 19 kW and less than 75 kW with displacement below $0.9 \mathrm{~L} /$ cylinder may alternatively certify some or all of their engine families to a particulate matter (PM) emission standard of 0.20 grams per kilowatt-hour ( $\mathrm{g} / \mathrm{kW}-\mathrm{hr}$ ) and a NOx +HC emission standard fo $5.8 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$ for 2014 and later model years.
    ${ }^{\mathrm{k}}$ The applicable Tier $2 \mathrm{NOx}+\mathrm{HC}$ standards continue to apply instead of the Tier 3 values for engines at or above 2000 kW .
    ${ }^{1}$ These Tier 3 standards apply to Category 1 engines below 3700 kW except for recreational marine engines at or above 3700 kW (with any displacement), which must meet the Tier 3 standards specified for recreational marine engines with a displacement of 3.5 to $7.0 \mathrm{~L} /$ cylinder.
    ${ }^{\mathrm{m}}$ The following provisions are optional: 1)Manufacturers may use NOx credits to certify Tier 4 engines to a NOX + HC emission standard of $1.9 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$ instead of the NOX and HC standards. See 40 CFR 1042.101(a)(8)(i) for more details. 2) For engines below 1000 kW , manufacturers may delay complying with the Tier 4 standards until October 1, 2017. 3) For engines at or above 3700 kW , manufacturers may delay complying with the Tier 4 standards until December 31, 2016.
    ${ }^{\mathrm{n}}$ The Tier 4 standard is for $\mathrm{HC}($ not $\mathrm{HC}+\mathrm{NOx})$ in $\mathrm{g} / \mathrm{kW}-\mathrm{hr}$.
    ${ }^{\circ}$ These Tier 3 standards apply to Category 2 engines below 3700 kW ; no Tier 3 standards apply for Category 2 engines at or above 3700 kW , although there are Tier 4 standards that apply.

[^96]:    ${ }^{\text {a }}$ The numerical emission standards for hydrocarbons (HC) must be met based on the following types of HC emissions for engines powered by the following fuels: (1) total hydrocarbon equivalent for alcohol; (2) non-methane hydrocarbon for natural gas; and (3) total hydrocarbons for other fuels.

[^97]:    ${ }^{\mathrm{b}} \mathrm{P}$ stands for the maximum engine power in kilowatts.
    ${ }^{c}$ Manufacturers may generate or use emission credits for averaging, but not for banking or trading.
    ${ }^{\mathrm{d}}$ Useful life and warranty period are expressed hours or years of operation (unless otherwise indicated), whichever comes first.
    ${ }^{\mathrm{e}}$ The test procedure for federal standards uses the International Organization for Standardization (ISO) 8178 E4 5-Mode Steady-State Test Cycle.
    ${ }^{\text {f }}$ Also applies to model year (MY) 1997 engine families certified pursuant to 40 Code of Federal Regulations (CFR) 91.205.
    ${ }^{\mathrm{g}}$ Not-to-exceed emission standards specified in 40 CFR 1045.107 also apply.
    ${ }^{h}$ A longer useful life in terms of hours must be specified for the engine family if the average service life is longer than the minimum value as described in 40 CFR 1045.103(e)(3).
    ${ }^{\text {i }}$ The useful life may not be shorter than: (1) 150 hours of operation; (2) the recommended overhaul interval; or (3) the engine's mechanical warranty. A longer useful life must be specified in terms of hours if the average service life is longer than the minimum value as described in 40 CFR 1045.105(e)(3).

[^98]:    ${ }^{i}$ Manufacturers may certify off-highway motorcycles with engines that have total displacement of 70 cubic centimeters (cc) or less to an HC+NOx standard of 16.1 grams per kilowatt-hour ( $\mathrm{g} / \mathrm{kW}-\mathrm{hr}$ ) (with an FEL cap of $32.2 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$ ) and a CO standard of $519 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.
    ${ }^{\mathrm{j}}$ Maximum allowable FEL for $\mathrm{HC}+\mathrm{NOx}$ is $20.0 \mathrm{~g} / \mathrm{km}$.
    ${ }^{\mathrm{k}}$ Manufacturers may certify all-terrain vehicles with engines that have total displacement of less than 100 cc to an HC+NOx standard of $25.0 \mathrm{~g} / \mathrm{KW}-\mathrm{hr}$ (with an FEL cap of $40.0 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$ ) and a CO standard of $500 \mathrm{~g} / \mathrm{kW}-\mathrm{hr}$.

[^99]:    ${ }^{\text {a }}$ Standards effective January 1 at the refinery gate.
    ${ }^{\mathrm{b}}$ No Refinery Average Standard applies in 2004; Corporate Average Standard applies in 2004 (120 ppm) and 2005 ( 90 ppm ).
    ${ }^{\text {c }}$ Cap exceedances up to 50 ppm in 2004 must be made up in 2005.
    ${ }^{\text {d }}$ Geographic Phase-in Area (GPA) refiners must also comply with the corporate average standards in 2004 and 2005 if less than $50 \%$ of the refiner's gasoline is designated as GPA gasoline in a given compliance period.
    ${ }^{e}$ GPA refiners may receive an additional two years (i.e., through 2008) to comply with the $30 / 80 \mathrm{ppm}$ gasoline sulfur standards in exchange for producing $95 \%$ of their highway diesel fuel at the 15 ppm sulfur standard by June 1,2006 .
    ${ }^{\mathrm{f}}$ Small refiners may receive an additional two years (i.e., through 2009) to comply with the $30 / 80 \mathrm{ppm}$ gasoline sulfur standards via a hardship demonstration.
    ${ }^{\mathrm{g}}$ Small refiners may receive an additional three years (i.e., through 2010) to comply with the $30 / 80 \mathrm{ppm}$ gasoline sulfur standards in exchange for producing $95 \%$ of their highway diesel fuel at the 15 ppm sulfur standard by June 1, 2006.
    ${ }^{\text {h }}$ Small refiners may receive a $20 \%$ increase in their annual average and per-gallon cap standards in exchange for producing $95 \%$ of their highway, nonroad, locomotive, and marine diesel fuel at the 15 ppm sulfur standard by June 1, 2006.
    ${ }^{i}$ Downstream standards are effective February 1 at any downstream location other than at a retail outlet or wholesale purchaser-consumer (e.g., pipelines and terminals) and March 1 at any downstream location.
    ${ }^{j}$ Downstream standards for gasoline that is not blended with small refiner gasoline are shown. Refer to the Code of Federal Regulations (CFR) for the downstream standards that apply when a gasoline blend includes small refiner gasoline.

[^100]:    ${ }^{\text {a }}$ For highway diesel fuel, standards are effective June 1 for refiners/importers, September 1 for pipelines and terminals, and October 15 for retailers and wholesale purchaser-consumers. Anti-downgrading provisions effective October 16, 2006.
    ${ }^{\mathrm{b}}$ For Nonroad, Locomotive, and Marine (NRLM) diesel fuel, standards are effective June 1 for refiners; downstream requirements apply for Northeast/Mid-Atlantic area only (August 1 for terminals, October 1 for retailers and wholesale purchaser-consumers, and December 1 for in-use).
    ${ }^{c}$ For highway diesel fuel, standards are effective June 1 for refiners/importers, October 1 for pipelines and terminals, and December 1 for retailers and wholesale purchaser-consumers.
    ${ }^{d}$ For NRLM diesel fuel, standards are effective June 1 for refiners, August 1 for terminals, October 1 for retailers and wholesale purchaser-consumers, and December 1 for in-use.
    ${ }^{\mathrm{e}}$ Excluding the Northeast and Alaska.
    ${ }^{\mathrm{f}}$ Excluding the Northeast, with approval in Alaska.
