
UNCONVENTIONAL NANOPATTERNING TECHNIQUES AND APPLICATIONS

John A. Rogers
Hong H. Lee

WILEY

A John Wiley & Sons, Inc., Publication

CONTENTS

PREFACE	xv
I NANOPATTERNING TECHNIQUES	1
1 INTRODUCTION	3
2 MATERIALS	7
2.1 Introduction / 7	
2.2 Mold Materials and Mold Preparation / 8	
2.2.1 Soft Molds / 8	
2.2.2 Hard Molds / 19	
2.2.3 Rigiflex Molds / 19	
2.3 Surface Treatment and Modification / 21	
References / 23	
3 PATTERNING BASED ON NATURAL FORCE	27
3.1 Introduction / 27	
3.2 Capillary Force / 28	
3.2.1 Open-Ended Capillary / 29	
3.2.2 Closed Permeable Capillary / 31	
3.2.3 Completely Closed Capillary / 40	
3.2.4 Fast Patterning / 43	
3.2.5 Capillary Kinetics / 45	
3.3 London Force and Liquid Filament Stability / 48	
3.3.1 Patterning by Selective Dewetting / 49	
3.3.2 Liquid Filament Stability: Filling and Patterning / 51	
3.4 Mechanical Stress: Patterning of A Metal Surface / 56	
References / 63	
4 PATTERNING BASED ON WORK OF ADHESION	67
4.1 Introduction / 67	
4.2 Work of Adhesion / 68	

- 4.3 Kinetic Effects / 71
- 4.4 Transfer Patterning / 74
- 4.5 Subtractive Transfer Patterning / 79
- 4.6 Transfer Printing / 82
- References / 91

**5 PATTERNING BASED ON LIGHT: OPTICAL
SOFT LITHOGRAPHY**

95

- 5.1 Introduction / 95
- 5.2 System Elements / 96
 - 5.2.1 Overview / 96
 - 5.2.2 Elastomeric Photomasks / 96
 - 5.2.3 Photosensitive Materials / 99
- 5.3 Two-Dimensional Optical Soft Lithography (OSL) / 100
 - 5.3.1 Two-Dimensional OSL with Phase Masks / 100
 - 5.3.2 Two-Dimensional OSL with Embossed Masks / 104
 - 5.3.3 Two-Dimensional OSL with Amplitude Masks / 105
 - 5.3.4 Two-Dimensional OSL with Amplitude/Phase Masks / 109
- 5.4 Three-Dimensional Optical Soft Lithography / 110
 - 5.4.1 Optics / 111
 - 5.4.2 Patterning Results / 112
- 5.5 Applications / 117
 - 5.5.1 Low-Voltage Organic Electronics / 117
 - 5.5.2 Filters and Mixers for Microfluidics / 118
 - 5.5.3 High Energy Fusion Targets and Media for Chemical Release / 118
 - 5.5.4 Photonic Bandgap Materials / 120
- References / 122

**6 PATTERNING BASED ON EXTERNAL FORCE:
NANOIMPRINT LITHOGRAPHY**

129

L. Jay Guo

- 6.1 Introduction / 129
- 6.2 NIL MOLD / 133
 - 6.2.1 Mold Fabrication / 133
 - 6.2.2 Mold Surface Preparation / 137
 - 6.2.3 Flexible Fluoropolymer Mold / 137
- 6.3 NIL Resist / 138
 - 6.3.1 Thermoplastic Resist / 139
 - 6.3.2 Copolymer Thermoplastic Resists / 141
 - 6.3.3 Thermal-Curable Resists / 142
 - 6.3.4 UV-Curable Resist / 146
 - 6.3.5 Other Imprintable Materials / 148
- 6.4 The Nanoimprint Process / 149
 - 6.4.1 Cavity Fill Process / 149

- 6.5 Variations of NIL Processes / 152
 - 6.5.1 Reverse Nanoimprint / 152
 - 6.5.2 Combined Nanoimprint and Photolithography / 155
 - 6.5.3 Roll-to-Roll Nanoimprint Lithography (R2RNIL) / 156
- 6.6 Conclusion / 159
- References / 160

7 PATTERNING BASED ON EDGE EFFECTS: EDGE LITHOGRAPHY

167

Matthias Geissler, Joseph M. McLellan, Eric P. Lee and Younan Xia

- 7.1 Introduction / 167
- 7.2 Topography-Directed Pattern Transfer / 169
 - 7.2.1 Photolithography with Phase-Shifting Masks / 170
 - 7.2.2 Use of Edge-Defined Defects in SAMs / 172
 - 7.2.3 Controlled Undercutting / 175
 - 7.2.4 Edge-Spreading Lithography / 176
 - 7.2.5 Edge Transfer Lithography / 178
 - 7.2.6 Step-Edge Decoration / 180
- 7.3 Exposure of Nanoscale Edges / 181
 - 7.3.1 Fracturing of Thin Films / 182
 - 7.3.2 Sectioning of Encapsulated Thin Films / 182
 - 7.3.3 Thin Metallic Films along Sidewalls of Patterned Stamps / 184
 - 7.3.4 Topographic Reorientation / 186
- 7.4 Conclusion and Outlook / 187
- References / 188

8 PATTERNING WITH ELECTROLYTE: SOLID-STATE SUPERIONIC STAMPING

195

Keng H. Hsu, Peter L. Schultz, Nicholas X. Fang, and Placid M. Ferreira

- 8.1 Introduction / 195
- 8.2 Solid-State Superionic Stamping / 197
- 8.3 Process Technology / 199
- 8.4 Process Capabilities / 203
- 8.5 Examples of Electrochemically Imprinted Nanostructures Using the S4 Process / 208
- Acknowledgments / 211
- References / 211

9 PATTERNING WITH GELS: LATTICE-GAS MODELS

215

Paul J. Wesson and Bartosz A. Grzybowski

- 9.1 Introduction / 215
- 9.2 The RDF Method / 218

9.3	Microlenses: Fabrication / 218
9.4	Microlenses: Modeling Aspects / 220
9.4.1	Modeling Using PDEs / 220
9.4.2	Modeling Using Lattice-Gas Method / 221
9.5	RDF at the Nanoscale / 222
9.5.1	Nanosopic Features from Counter-Propagating RD Fronts / 222
9.5.2	Failure of Continuum Description / 225
9.5.3	Lattice-Gas Models at the Nanoscale / 227
9.6	Summary and Outlook / 229
	References / 230

10 PATTERNING WITH BLOCK COPOLYMERS **233**

Jia-Yu Wang, Wei Chen, and Thomas P. Russell

10.1	Introduction / 233
10.2	Orientation / 235
10.2.1	Self-Assembling / 235
10.2.2	Self-Directing / 247
10.3	Long-Range / 254
10.3.1	Solvent Annealing / 254
10.3.2	Graphoepitaxy / 256
10.3.3	Sequential, Orthogonal Fields / 260
10.4	Nanoporous BCP Films / 262
10.4.1	Ozonolysis / 264
10.4.2	Thermal Degradation / 264
10.4.3	UV Degradation / 267
10.4.4	Selective Extraction / 271
10.4.5	“Soft” Chemical Etch / 272
10.4.6	Cleavable Junction / 272
10.4.7	Solvent-Induced Film Reconstruction / 274
	References / 276

11 PERSPECTIVE ON APPLICATIONS **291**

II APPLICATIONS **293**

**12 SOFT LITHOGRAPHY FOR MICROFLUIDIC
MICROELECTROMECHANICAL SYSTEMS (MEMS)
AND OPTICAL DEVICES** **295**

*Svetlana M. Mitrovski, Shraddha Avasthy, Evan M. Erickson,
Matthew E. Stewart, John A. Rogers, and Ralph G. Nuzzo*

12.1	Introduction / 295
12.2	Microfluidic Devices for Concentration Gradients / 297

- 12.3 Electrochemistry and Microfluidics / 300
- 12.4 PDMS and Electrochemistry / 302
- 12.5 Optics and Microfluidics / 306
- 12.6 Unconventional Soft Lithographic Fabrication
of Optical Sensors / 314
- Acknowledgments / 317
- References / 318

13 UNCONVENTIONAL PATTERNING METHODS FOR BioNEMS 325

Pilnam Kim, Yanan Du, Ali Khademhosseini, Robert Langer, and Kahp Y. Suh

- 13.1 Introduction / 325
- 13.2 Fabrication of Nanofluidic System for
Biological Applications / 326
 - 13.2.1 Unconventional Methods for Fabrication of
Nanochannel / 326
 - 13.2.2 Application of Nanofluidic System / 332
- 13.3 Fabrication of Biomolecular Nanoarrays for Biological
Applications / 338
 - 13.3.1 DNA Nanoarray / 338
 - 13.3.2 Protein Arrays / 340
 - 13.3.3 Lipid Array / 345
- 13.4 Fabrication of Nanoscale Topographies for Tissue Engineering
Applications / 347
 - 13.4.1 Nanotopography-Induced Changes in Cell
Adhesion / 347
 - 13.4.2 Nanotopography-Induced Changes in Cell
Morphology / 348
- References / 349

14 MICRO TOTAL ANALYSIS SYSTEM 359

Yuki Tanaka and Takehiko Kitamori

- 14.1 Introduction / 359
 - 14.1.1 Historical Backgrounds / 359
- 14.2 Fundamentals on Microchip Chemistry / 361
 - 14.2.1 Characteristics of Liquid Microspace / 361
 - 14.2.2 Liquid Handling / 362
 - 14.2.3 Concepts of Micro Unit Operation and Continuous-Flow
Chemical Processing / 362
- 14.3 Key Technologies / 365
 - 14.3.1 Fabrication of Microchips / 365
 - 14.3.2 Patterning for Fluid Control / 366
 - 14.3.3 Detection / 366
- 14.4 Applications / 368
 - 14.4.1 Synthesis / 368

14.4.2 Cell Adhesion Control / 369

14.4.3 Liquid Handling: Valve Using Wettability / 370

References / 372

15 COMBINATIONS OF TOP-DOWN AND BOTTOM-UP NANOFABRICATION TECHNIQUES AND THEIR APPLICATION TO CREATE FUNCTIONAL DEVICES 379

Pascale Maury, David N. Reinhoudt, and Jurriaan Huskens

15.1 Introduction / 379

15.2 Top-Down and Bottom-Up Techniques / 380

15.2.1 Top-Down Techniques / 380

15.2.2 Bottom-Up Techniques / 383

15.2.3 Mixed Techniques / 384

15.3 Combining Top-Down and Bottom-Up Techniques for High Resolution Patterning / 385

15.3.1 Top-Down Nanofabrication and Polymerization / 386

15.3.2 Top-Down Nanofabrication and Micelles / 387

15.3.3 Top-Down Nanofabrication and Block Copolymer Assembly / 387

15.3.4 Top-Down Nanofabrication and NP Assembly / 389

15.3.5 Top-Down Nanofabrication and Layer-by-Layer Assembly / 392

15.4 Application of Combined Top-Down and Bottom-Up Nanofabrication for Creating Functional Devices / 397

15.4.1 Photonic Crystal Devices / 397

15.4.2 Protein Assays / 400

References / 406

16 ORGANIC ELECTRONIC DEVICES 419

16.1 Introduction / 419

16.2 Organic Light-Emitting Diodes / 420

16.3 Organic Thin Film Transistors / 429

References / 439

17 INORGANIC ELECTRONIC DEVICES 445

17.1 Introduction / 445

17.2 Inorganic Semiconductor Materials for Flexible Electronics / 446

17.2.1 "Bottom-Up" Approaches / 447

17.2.2 "Top-Down" Approaches / 449

- 17.3 Soft Lithography Techniques for Generating Inorganic Electronic Systems / 452
 - 17.3.1 Micromolding in Capillaries / 453
 - 17.3.2 Imprint Lithography / 454
 - 17.3.3 Dry Transfer Printing / 454
- 17.4 Fabrication of Electronic Devices / 459
 - 17.4.1 Transistors on Rigid Substrates via MIMIC Processing / 459
 - 17.4.2 Flexible Inorganic Transistors / 459
 - 17.4.3 Flexible Integrated Circuits / 463
 - 17.4.4 Heterogeneous Electronics / 466
 - 17.4.5 Stretchable Electronics / 469
- References / 475

18 MECHANICS OF STRETCHABLE SILICON FILMS ON ELASTOMERIC SUBSTRATES

483

Hanqing Jiang, Jizhou Song, Yonggang Huang, and John A. Rogers

- 18.1 Introduction / 483
- 18.2 Buckling Analysis of Stiff Thin Ribbons on Compliant Substrates / 484
- 18.3 Finite-Deformation Buckling Analysis of Stiff Thin Ribbons on Compliant Substrates / 488
- 18.4 Edge Effects / 495
- 18.5 Effect of Ribbon Width and Spacing / 498
- 18.6 Buckling Analysis of Stiff Thin Membranes on Compliant Substrates / 502
 - 18.6.1 One-Dimensional Buckling Mode / 504
 - 18.6.2 Checkerboard Buckling Mode / 506
 - 18.6.3 Herrington Buckling Mode / 506
- 18.7 Precisely Controlled Buckling of Stiff Thin Ribbons on Compliant Substrates / 507
- 18.8 Concluding Remarks / 512
- Acknowledgments / 512
- References / 512

19 MULTISCALE FABRICATION OF PLASMONIC STRUCTURES **515**

Joel Henzie, Min H. Lee, and Teri W. Odom

- 19.1 Introduction / 515
 - 19.1.1 Brief Primer on Surface Plasmons / 517
 - 19.1.2 Conventional Methods to Plasmonic Structures / 518
- 19.2 Soft Lithography and Metal Nanostructures / 518
- 19.3 A Platform for Multiscale Patterning / 520

- 19.3.1 Soft Interference Lithography: Patterns on a Nanoscale Pitch / 520
- 19.3.2 Phase-Shifting Photolithography: Patterns on a Microscale Pitch / 520
- 19.3.3 PEEL: Transferring Photoresist Patterns to Plasmonic Materials / 521
- 19.4 Subwavelength Arrays of Nanoholes: Plasmonic Materials / 522
 - 19.4.1 Infinite Arrays of Nanoholes / 523
 - 19.4.2 Finite Arrays (Patches) of Nanoholes / 525
- 19.5 Microscale Arrays of Nanoscale Holes / 526
- 19.6 Plasmonic Particle Arrays / 528
 - 19.6.1 Metal and Dielectric Nanoparticles / 528
 - 19.6.2 Anisotropic Nanoparticles / 531
 - 19.6.3 Pyramidal Nanostructures / 531
- Acknowledgments / 533
- References / 533

20 A RIGIFLEX MOLD AND ITS APPLICATIONS

539

Se-Jin Choi, Tae-Wan Kim, and Seung-Jun Baek

- 20.1 Introduction / 539
- 20.2 Modulus-Tunable Rigiflex Mold / 540
- 20.3 Applications of Rigiflex Mold / 544
 - 20.3.1 From Nanoimprint to Microcontact Printing / 544
 - 20.3.2 Rapid Flash Patterning for Residue-Free Patterning / 547
 - 20.3.3 Continuous Rigiflex Imprinting / 549
 - 20.3.4 Soft Molding Application / 553
 - 20.3.5 Capillary Force Lithography Applications / 556
 - 20.3.6 Transfer Fabrication Technique / 558
- References / 561

21 NANOIMPRINT TECHNOLOGY FOR FUTURE LIQUID CRYSTAL DISPLAY

565

Jong M. Kim, Hwan Y. Choi, Moon-G. Lee, Seungho Nam, Jin H. Kim, Seongmo Whang, Soo M. Lee, Byoung H. Cheong, Hyuk Kim, Ji M. Lee, and In T. Han

- 21.1 Introduction / 565
- 21.2 Holographic LGP / 569
 - 21.2.1 Design and Properties of Holographic LGP / 570
 - 21.2.2 NI Technology for the Holographic LGP / 572
- 21.3 Polarized LGP / 573
 - 21.3.1 Design and Properties of Polarized LGP / 574

21.3.2	Fabrication of the Polarized LGP /	575
21.3.3	Optical Performance of the Polarized LGP /	576
21.4	Reflective Polarizer: Wire Grid Polarizer /	579
21.4.1	Design and Properties of WGP /	580
21.4.2	Fabrication and Applications /	581
21.5	Transflective Display /	585
21.5.1	Design and Optical Properties of Reflecting Pattern /	587
21.5.2	Fabrication of the Reflecting Pattern /	588
	References /	592
